### Areas of use

- Conference and meeting rooms
- Presentation and training rooms
- 'Think Tank ' areas for brainstorming
- Schools, colleges and business centres
- Around columns and workstations
- Partitioning

Non-woven wallcovering is a kind of high-end wallcovering. It is made of natural plant fiber non-woven technology; Most people called it "breathing wallcovering". It is currently the most popular new green environmental protection material in the world.

Non-woven materials have the advantages of sound insulation and noise reduction, air permeability, flexibility, light weight, non-combus-tibility, easy decomposition, non-toxic and non-irritating, recyclable, and natural feel. It is harmless to the environment and fully complies with environmental safety standards. Because non-woven products have pure color, visual comfort, elegance and nobleness, they are the first choice for high-end decoration.
