Belgian family company

Founded in 1971

We are a trendsetting Belgian manufacturer specialized in refined rugs and decoration textiles. This family company has been founded in 1971. Our 4 managers, Frank, Isabelle, Tony and Vincent, all have the same goal: to share their passion for decorative textiles and carpets with their clients.

Thanks to the know-how that was present within the family, over the years we have invested very hard in an internationally deployable machine park full of custom-made options.

Today, we offer exclusive decoration textiles and carpets for various sectors in more than 75 countries. We surrounded ourselves with a highly skilled, dynamic, creative and innovative team.

Our collections contain both contemporary and traditional designs in a wide range from low end to high end rugs. All rugs are made-to-order, giving the customer the opportunity to make a personalized selection from the complete range. It guarantees the customers flexibility, service and quality based on a unique collection.

“By combining our carefully selected yarns with a wide range of color creels, we give each product a profound sophistication.

The fabrics and carpets with inhouse developed patterns are characterized with a soft, natural feeling and finesse.”

Vision & mission

We respond quickly to trends, constantly invest in sustainability and keep looking for opportunities to offer our products in the best possible quality. In order to achieve this, we only go for the very best raw materials.

Since we have one of the most flexible production lines in the world, we can quickly meet your demands, even if you need small quantities or extensive ranges within different qualities. We directly supply a wide range of decorative textiles and carpets that you can put together yourself from our collections and market internationally.

We strive to maintain quality and sustainability in a constantly evolving world. Keeping the demands of our clients and expectations of the product we create in the top of our mind. Our goal is to make the largest part of the production process and product components as ecological as possible.

Sustainability & Sustainable Development

We do our very best to minimize waste in our production process and our other activities. In order to accomplish this, we make the necessary efforts.

Our products are 100% **Made in Belgium**
Despite the high wages and taxes, we believe in making fashion goods with added value.

Our modern production facility is equipped with Vandewiele machines, to which we added custom-made options using our in-depth expertise and technological know-how. This makes it possible to weave our complex drawings in detail and work flexibly. We continuously invest in automatization. This way, we get the most out of our production and offer exclusive qualities.

We believe in renewable and clean energy. That's why our rooftops are covered with 10,500 m² of solar panels, making it possible to produce our products partially on solar energy.

We use automatic spool winders. This way, we can use almost 100% of our spools and avoid a lot of waste. Waste from carpets, cut-offs, leftover yarn, plastics, household, metal and oil is sorted and collected for recycling and wooden pallets are recovered. All the cardboard we use is 100% recycled. We avoid overproduction, producing only on demand and always maintaining quality. The backing of our carpets is made from recycled cotton.

Viscose and most of our polyester yarns are dope dyed. This technology adds the color pigment during the extrusion of the yarn and reduces water use to a minimum.

Refined rugs & Decoration textiles

"100% viscose or polyester: our color creels are adjusted to changing markets and are yearly evaluated."

VISCOSE

Our viscose rugs come in fine patterns, combined with a rich color palette and a natural silky sheen. It's a durable, soft fabric and a very popular textile that was originally developed as a substitute for silk.

WOOL-VISCOSE

These rugs are a combination of natural undyed wool and a viscose pile. The qualities made in wool and viscose look handmade because of their structure and finishing.

VISCOSE-POLYESTER

We combine viscose and polyester shrinkage yarns, so that the carpet gets an embossed effect after heat treatment during the finishing process. The polyester base shrinks, after which the carpet takes on silk-wool look.

WOOL

Our wool qualities consist of yarns that are spun from natural undyed wool, and therefore give a beautiful artisanal and handwoven effect. These rugs have a flat woven construction.

POLYESTER

The polyester we use gives the rugs an artisanal look, but with all the benefits that polyester provides. Think of easy maintenance, colorfastness, no pilling,...

Our interior textiles can be combined to add a luxurious touch to any interior. We translate style, comfort and cosiness into our sublime collection of rugs and fabrics, all of them are Made in Belgium with extreme care for quality. All products feature natural, vibrant colors and sublime textures and fibres.

There are countless options in terms of colour, design,... The patterns are completely customisable to our customer's requirements. This also makes it possible to order rugs and fabrics in the same designs. With the expertise of a team of professional textile designers, the possibilities are endless.

All of our products have a STANDARD 100 label from OEKO-TEX®. The label guarantees that the final product contains no harmful substances or residues of pesticides and heavy metals. Each component of an item with the STANDARD 100 label has been tested for harmful substances and is therefore harmless to human health.

Our company is GRS certified. The Global Recycle Standard (GRS) is a voluntary, international product standard by which we maintain control over and guard against the social, environmental and chemical impact of our production. We know where our materials come from, guarantee good working conditions and limit our impact on the environment.
