

Industry Leading Ceramic Technology

Our New CXD Coating

This groundbreaking coating has all of the stuff you want and none of the stuff you don't. Our industry-leading, diamond-infused nonstick coating paired with our innovative, CXD ceramic technology takes nonstick cookware to the next level. Compared to other ceramic cookware, CXD will never falter in its performance, thanks to its dual coating design and up to 240,000 diamond crystals per pan.

Our Process

Utilizing a cast aluminum body that will never spin or warp, CXD is coated with TWO ceramic layers instead of the usual single layer. The first plasma hard coat creates a safe and reliable bond with the second, diamond infused wet coat, resulting in superior release properties and extraordinary longevity.

How They Work Together

The combination of a pressure cast aluminum base and our proprietary CXD coating creates lifelong, pro-level cookware for worry free cooking! Get the perfect sear without any of those nasty PFAS chemicals.

Worry Free, Healthy Cooking

After years of perfecting our proprietary nonstick coatings and extensive research, we present CXD! This nonstick coating is free of PFAS and PFOA while maintaining the groundbreaking performance that won the hearts of millions of home chefs around the world. Yes, CXD still has up to 240,000 diamond crystals per pan, providing an extremely durable cooking surface, superior heat distribution, and retention. This ceramic-based nonstick coating is manufactured exclusively in our Sierre, Switzerland facility, demonstrating our dedication to sustainability and strict quality control. Applied in two layers, one plasma hard coat and one diamond infused wet coat, CXD has superior release properties and extraordinary longevity compared to single layers on other pans.
