

MINERAL WATER FILTER

Made in France

OPERATION

In nature, spring water passes through layers of soil, sand and rock, which trap suspended particles and purify the water.

Volkao adopts this natural filtration principle, using a series of porous natural materials to retain water impurities and eliminate contaminants.

PROMISE

Volkao's ambition is to solve a major problem : the deterioration in the quality of tap water quality.

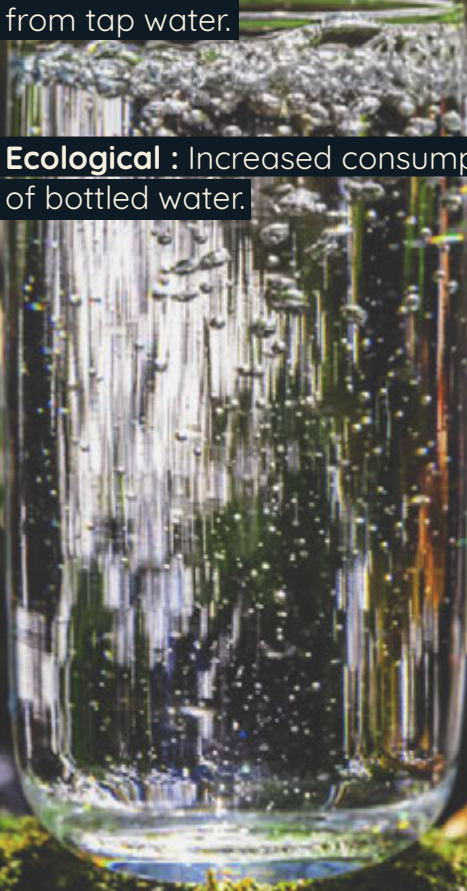

This deterioration has two consequences :

Health : Risk of contamination from tap water.

Ecological : Increased consumption of bottled water.

High-performance filtration for all types of water contamination (pesticides, nitrates, bacteria, drug residues, etc.)

A natural, ecological filtration system

A showcase for French manufacturing know-how

The Volkao filter pot is made from 100% natural materials. All these elements are recognized for their effectiveness and purifying properties :

Grey clay :

Renowned for absorbing impurities and softening water, it forms the foundation of the filter pot.

Activated carbon :

Recognized for its ability to capture micro-pollutants and improve the taste of water.

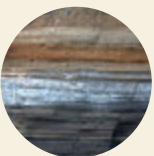

Colloidal silver :

Acts as a disinfectant thanks to its natural properties antibacterial.

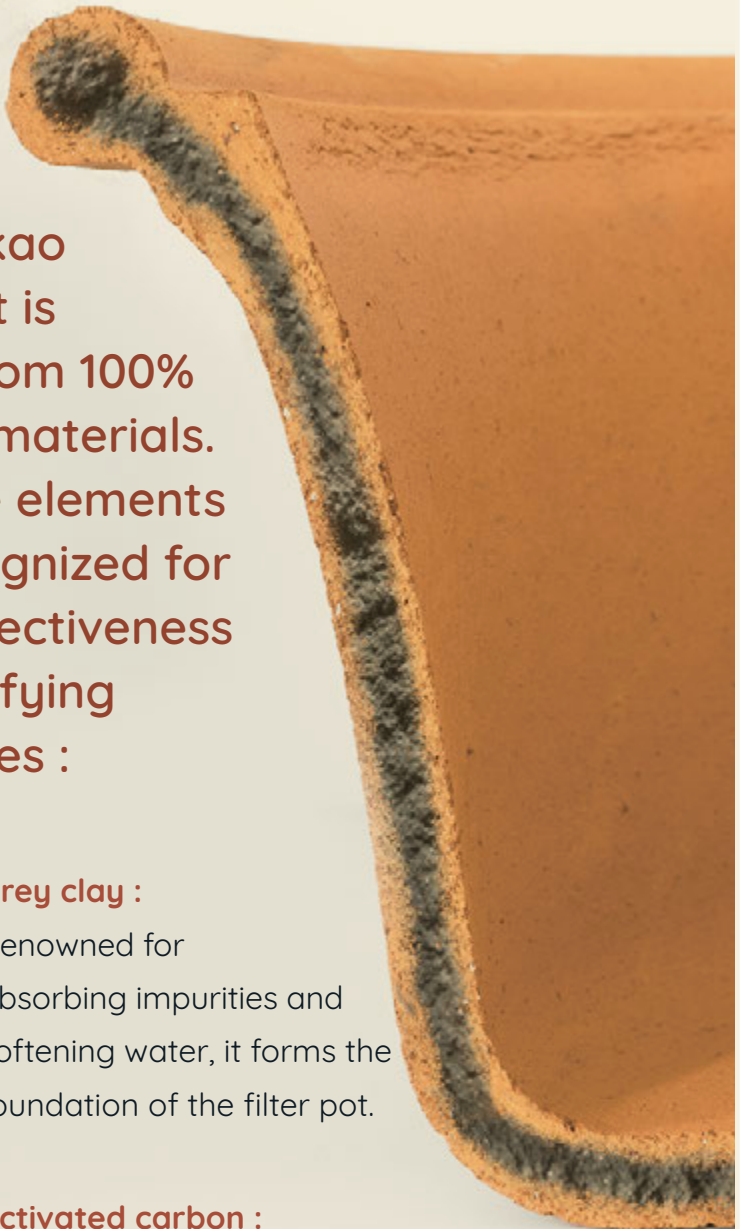

Zeolite :

This volcanic rock powder retains heavy metals and toxins.

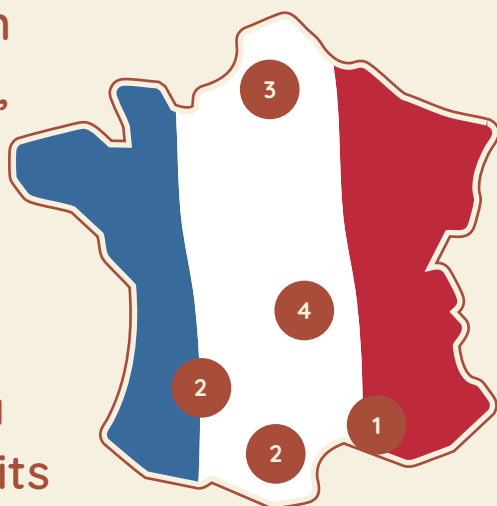

Mineral mix :

A range of other minerals, each with a different role to ensure the best filtration.

MADE IN FRANCE

Proud to work with French companies, Volkao wishes to honor their unique know-how. Each component is manufactured in a region chosen for its historical expertise.

1- Bouches-du-Rhône :

Volkao is a French product, imagined and designed in Marseille.

2- Lot-et-Garonne and Aude :

For the filter pot, Volkao chose these two departments for their historic expertise in clay and terracotta. The filter pot is designed from A to Z : from mixing the clay with the minerals to firing the pot, pressing and drying.

3- Somme :

It's here, in the Vimeu region to be precise, that the tap and handle are created. This region excels in brass work for exceptional pieces.

4- Puy-de-Dôme :

In this sawmill, panels of different types of wood are cut to form the base.

A high-performance water filter : Effective filtration against 99.99% of contaminants

100% natural and mineral : A natural and innovative filter directly inspired by the Earth

Made in France : Volkao is designed, manufactured and assembled in France

Ecological : An eco-responsible, biodegradable filter designed to reduce our ecological footprint.

Easy to use : Easy to install and maintain, designed for everyday use.

Filtration performance certified
by Aix-Marseille University France

Dimensions : L. 29,4cm x H. 48,2cm

Capacity : 10 L
