ABOUT US

Hangzhou MEDO is A Professional Manufacturer Of Water Bottles. Integrating Research, Development, Production And Sales. With 20+ Years Of Experience In OEM And ODM Solution. Including Product Sizes, Colors, Materials, Print, Logo And Packaging Design, Etc. Our Factory Always Strictly Control Quality. All of our products comply with FDA, LFGB and CE standards. , We Have Rich Experience In Cooperating With Big Wholesalers Like Costco, Coco Cola, Beefeater And So On. We Can Provide One-Step Custom Services For Every Customer.

CERTIFICATION

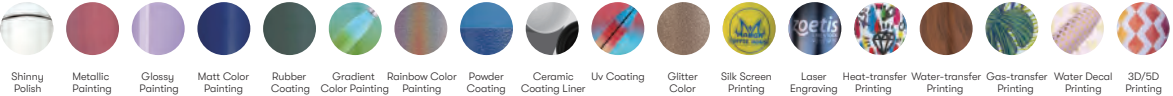

PRODUCTION PROCESS

PROCESS INTRODUCTION

QUALITY DESIGN SERVICE

SILK SCREEN

A stencil method of printmaking in which a design is imposed on a screen of silk or other fine mesh, with blank areas coated with an impermeable substance, and ink is forced through the mesh onto the printing surface. Also called serigraphy, silk-screen process. Screen printing is not limited by the size and shape of the substrate. The ink layer has strong covering power and is suitable for various types of ink. This pattern is cheap and cost less, and also convenient to plate. But generally only 1-3 colors can be printed.

HEAT TRANSFER PRINTING

The transfer process transfer the line pattern on the transfer film to the surface of the product through one treatment (heating and pressurization) by the heat transfer machine. After forming, the ink layer is combined with the surface of this product, which is realistic and beautiful, greatly improves the grades of the product, low production cost, strong hiding power, strong adhesion, conforms to the green printing standards, and no pollution.

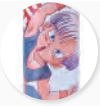

LASER LOGO

Laser engraving process is based on CNC technology, safe and reliable: non-contact processing, precious and meticulous: processing accuracy can reach 0.02mm, saving environmental protection: small beam and spot diameter, consistent with the batch effect, high speed, low cost: not limited by the number of processing.

3D

3D printing, or additive manufacturing, is the construction of a three-dimensional object from a CAD model or a digital 3D model. The pattern is printed on the product through a 3D printer, the color is bright, the pattern has a concave and convex shape, and the complicated graphic can be operated.

SUBLIMATION

Sublimation is mainly to heat the pigment molecules into the medium. The color is vivid and the layers are distinct. The sublimation technology is a printing technology that truly achieves photo quality. It is waterproof, UV-resistant and anti-fingerprint compared with other printing technologies. But the technology is cost more than others.

WATER DECAL

The water decal is actually a brand-new transfer technology. It is applied to the surface of any curved. The pattern and color are vivid, which greatly increases the added value of the product.

GAS DYE PRINTING

Gas dye printing is a process for printing on a special layer of paper/film/bud for gas dyeing with special gas-dyeing ink. Any complicated pattern can be transferred, there will be 360-degree seam. It is a high cost but clear pattern process.

WATER TRANSFER PRINTING

Water transfer is a kind of printing that uses water as a dissolving medium to transfer colored pattern transfer paper/film onto the product and transfer any natural lines, photographs and images onto the product. The limitation is that the transfer image is easily deformed, which is related to the product, and also related to the nature of the water transfer film itself. The higher the price, the more complicated the process.

EMBOSS

Emboss must have corresponding molds, the high cost, pattern and product are integrated, will not fall off, can improve products grade. The color of the logo is the same as the color of the cup.
