OMNIA

DESIGN BY EQUIPE 2

Made in Italy

A versatile pocket tool for opening different bottles and corks without additional tools.

For **standard corks**: double lever system which, unlike the single lever, is more precise and requires less force to remove the cork.

For **“sparkling” (mushroom) corks**: innovative retention system obtained by the arched teeth on the handle of the corkscrew, in correspondence with the joint of the double lever on the opposite side.

For **“crown” caps**: the special recess made on the back of the double lever allows you to open the crown caps of soft drinks, beers, etc.

Capsule cutter: curved knife blade that adheres to the circumference of the neck of the bottle, facilitating cutting and removal of the protective capsule.

MKM corkscrew OMNIA is unique in its style due to:

- **patent pending system** that allows opening both standard shape corks and mushroom shape corks (sparkling wine corks)
- **no need for other tools**, pliers or else when a sparkling wine cork is stuck in the neck of the bottle
- **no fatigued** or embarrassed waiter/barman trying to remove the cork with its apron
- **no waiter/barman leaving the customer waiting**, going to look around for a solution that is already in its own corkscrew
- **easy opening** foil cutter blade
- absolutely no difficulty opening the blade
- **no ruined/broken nails** to the many wine lovers with wonderful well-groomed hands
- well proven **double lever system**
- for a **safe and an easy cork extraction**
- lever embodies also the cap lifter
