

## Our Product made from TEAK WOOD

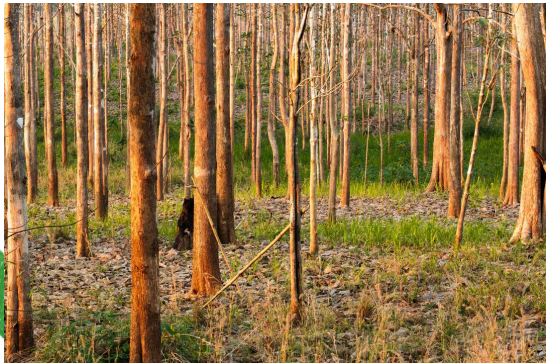

Teak is a forest resource that is extremely valuable to humans and the environment.

It is also the foundation for the sustainable development of important natural resources in terms of economy, society, and ecology for the better in a sustainable way. And teak is considered a resource that can be replanted when used.

## SUSTAINABLE

Companies and including various organizations have initiated activities that help reduce global warming such as producing environmentally friendly products and services. Meanwhile, forests have always been connected to humans because trees are absorb of carbon also known as carbon sink and carbon dioxide so forests therefore help to alleviate global warming.

From this situation, we realized the value of forests. Resulting in a reforestation project with government agencies Private agency or even various communities They are interested in planting forest gardens.

# THAI FORWARD TEAK WOOD UTENSILS

**Teak is a type of wood that is famous and widely known all over the world.**

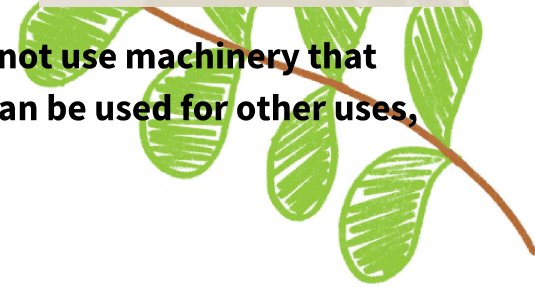

**Teak is resistant to weather, disease, and various insects. The wood has good texture and beautiful patterns, so it has properties suitable for many uses in construction and home decoration.**
