

PAINTINGS LOOK BETTER *with* M. GRAHAM COLOR

M. Graham professional grade paints are hand crafted in Oregon. We believe we have a responsibility to every artist that chooses our color, so we are continually working to create the best color possible. We do this by using the finest pigment and traditional ingredients to taking the time to custom mill each color.

Not only is M. Graham paint solvent-free, but so are our manufacturing and cleaning processes. We use walnut oil and non-toxic soaps to clean our rollers and equipment. Solvent free painting is better for artists, our employees, and the environment.

KEY SELLING FEATURES

OIL

- Professional grade artist color made with walnut oil.
- A traditional oil paint but you can be completely solvent free including cleaning your brushes with walnut oil.
- Walnut oil yellows less than other oils which is especially important in your whites, blues, and yellows.
- Walnut alkyd medium is an alcohol-based resin mixed with walnut oil. This is a drying agent, but the most important feature is increased adhesion between the paint film and the painting surface and the paint layers themselves. This makes for a more durable painting. Mix 1-3 drops per extruded inch of paint. This product is made to mix with paint and not as a varnish.

ACRYLIC

- Professional grade heavy body acrylic.
- We use a unique high solids acrylic polymer which allows us to increase pigment loads.
- It is slightly slower drying than some other acrylics which provides a longer open time.

WATERCOLOR

- Professional grade watercolor made with Northwest blackberry honey.
- Honey acts as a natural humectant so it pulls the moisture out of the air leaving our paint more moist in the palette.
- Our watercolors re-wet almost immediately even after months of disuse and resist hardening in the palette whereby providing you more time to paint and less time working in your palette.
- Your studio palette can be left in open air all year long. No need to use a sponge to get our paints moist.

GOUACHE

- Professional grade artist gouache. This is not a designers gouache.
- Designers gouache uses chalks or fillers to get the opacity. M. Graham artist gouache does not use any fillers - instead we over fill with pigment to get the matte finish and opacity.
- You can do a wash with M. Graham gouache like you can with watercolor.

All of our paints and mediums are compatible with other brands of paints and mediums.
