首域科技

## 公司简介

首域利达（北京）传动科技有限公司是一家集设计、研发、制造、服务为一体的工程装备方案服务商（下设全资子公司石家庄首域传动科技有限公司），其专利产品柔性传动柱装置最初应用于浅基坑、大行程、大载荷的机械化舞台，由我司自主研发，2011年获国家发明专利（专利号：ZL201010218464.1），产品规格从轻巧便携的07A至超大载荷的77A一应俱全。柔性柱已在国内许多大中型艺术中心、剧院和商业演出中广泛应用，因其安全稳定、高效便捷的卓越性能，获得了工业和国防领域客户的认可，拓展应用于汽车自动化生产线、物流仓储、医疗器械、雷达车升降系统等工业和军用系统解决方案，项目业绩遍布国内及港澳台、东南亚、韩国、俄罗斯等地区和国家。

公司成立至今，始终致力于柔性传动柱装置的系列化设计，重视收集市场反馈信息和行业专家建议，不断优化升级产品性能及生产工艺，提高可靠性和先进性，目前投放市场的是第四代柔性传动柱装置。2022北京冬奥会和冬残奥会开闭幕式上，柔性传动柱装置运用于地面中央舞台系统盖板升降核心驱动，安全可靠地完成对开车台的升降补偿盖板升降，确保主火炬“大雪花”上升惊艳亮相的同时完成盖板和地坪的无缝对接，助力冬奥会科技与艺术的完美融合。

公司研发技术团队拥有一批具备多年非标机械设计和加工经验的行业领军型专家和高学历技术工程师，专注研发大行程、大载荷、浅基坑的传动装置及衍生设备的解决方案。新落成的生产园区总建筑面积达万余平方米，配备有龙门加工中心、立式加工中心、机器人焊机、数控车床、数控锯床和三坐标检测设备等高精密智能化生产设备和试验中心。公司实施ISO9001:2008质量管理体系，从点到面、从细节到全局，从产品到管理，始终坚持勇于超越自我，稳步提升首域品牌价值。

作为机械传动行业的创新者，公司秉承“专注成就专业，精益铸就经久”的企业精神，整合资源优势，建立多种战略性合作方式，以打造中国装备制造业的响亮名片为己任。公司将技术创新融入发展血脉，先后荣获河北省科技型中小企业、河北省高新技术企业和河北省专精特新中小企业等称号。2019年，柔性传动柱装置荣获中国演艺设备技术协会评选的“舞台机械装置名优名品”荣誉称号。

公司创立十余年来，首域人走出了一条自主摸索、自主创新的产业技术发展之路，不断拓展新型领域。展望未来十年，公司将顺应《河北省制造业高质量发展“十四五”规划》中提出的装备智能化、集成化、绿色化、服务化的产业发展大势，更加注重科技创新及成套化服务的高质量发展，用熠熠生辉的产品和服务奔赴山海，开启建设卓越的工程装备方案服务商的新征程！

## Company Profile

Alphascope (Beijing) Transmission Technology Co., Ltd is an engineering equipment solution service provider engaged in design, R&D, manufacturing and service (with a wholly owned subsidiary Shijiazhuang Alphascope Transmission Technology Co., Ltd). Its patented product Flexible Transmission Column Lift (hereinafter referred to as Column Lift) was initially applied to the mechanized stage of shallow foundation pits, large stroke and large load. Column Lift was independently developed by our company and was awarded the national invention patent in 2011 (Patent No. ZL201010218464.1), with specifications ranging from the lightweight and portable 07A to the super-large load 77A. It has been widely used in many large and medium-sized art centers, theatres and commercial live shows in China. It has also won the favor of customers in industrial and defense fields for its safety, stability, efficiency and convenience. It is widely used in industrial and military system solutions such as automotive automation production lines, logistics, warehousing, medical equipment and radar vehicle lifting systems. The accomplished projects are widely located at home and abroad, such as Hong Kong, Macao and Taiwan, Southeast Asia, Korea, Russia and other regions and countries.

Since its establishment, the company has always been committed to the series design of Column Lift, valuing market feedback and industry experts' suggestions, and constantly optimized and upgraded the product performance and production process to improve reliability and advancement. The current product is the fourth generation of Column Lift. At the opening and closing ceremonies of the 2022 Beijing Winter Olympic and Paralympic Games, Column Lift was used as the core drive for the cover lift of the ground central stage system, safely and reliably completing lifting of the driving platform to compensate for the cover lift. This ensured the "Big Snowflake" of the main torch to rise and make a stunning appearance, flooring is seamlessly aligned, contributing to the perfect integration of technology and art in the Winter Olympics.

The company's R&D team has a group of industry-leading experts and highly educated engineers with many years of experience in non-standard mechanical design and processing, focusing on the development of solutions for transmission devices and derivative equipment with large stroke, large load, and shallow foundation pits. The newly completed production base has a total construction area of over 10,000 square meters and is equipped with high precision intelligent production equipment and test centers such as gantry machining centers, vertical machining centers, robot welding machines, CNC lathes, CNC sawing machines and three coordinate testing equipment. The company has implemented the ISO9001: 2008 quality management system, from point to surface, from details to the overall situation, from products to management, and always adheres to the courage to surpass oneself, steadily enhancing the brand value of Alphascope.

As an innovator in mechanical transmission industry, the company adheres to the corporate spirit of "Focusing on achieving professionalism and striving for excellence to create durability", integrates resource advantages, establishes various strategic cooperation, and takes it as its responsibility to create a bright business card for China's equipment manufacturing industry. The company has integrated technological innovation into its development bloodline and has been awarded titles such as Hebei Province Science and Technology Small and Medium sized Enterprise, Hebei Province High-tech Enterprise, and Hebei Province Specialized, Refined, and New Small and Medium sized Enterprise. In 2019, Column Lift was awarded the honorary title of "Famous and High-quality Stage Machinery" by China Performing Arts Technology Association.

Over the past decade since the establishment of the company, Alphascope staff has embarked on a path of independent exploration and innovation in industrial technology development, continuously expanding into new fields. Looking ahead to the next decade, the company will comply with the industrial development trend of equipment intelligence, integration, greening, and service-oriented proposed in the "14th Five Year Plan for High Quality Development of Hebei Province's Manufacturing Industry", pay more attention to technological innovation and high-quality development of complete sets of services, starting a new journey of building an excellent engineering equipment solution service provider!

# 大事记

## 变革奋进

2009

第一代柔性传动柱装置研发完成

The development of the first generation Column Lift was completed.

2011

柔性传动柱装置成功运用于国内知名艺术中心舞台

Column Lift was successfully applied to the stage of a well-known art center in China.

2013

柔性传动柱装置获国家发明专利

Column Lift was granted a national invention patent.

## 创新探索

2014

柔性传动柱装置获马来西亚客户青睐，首次走出国门

Column Lift won the favor of Malaysian customers and was applied to the project abroad for the first time.

2015

柔性传动柱装置运用于国内汽车自动化生产线

Column Lift was applied to a domestic automotive automation production line.

柔性传动柱装置运用于国防军工领域

Column Lift was applied to the field of national defense and military.

2019

柔性传动柱装置运用于世界知名工业巨头自动化生产线

Column Lift was applied to the automation production line of a world-renowned industrial giant.

## 转型升级

2021

首域新厂区建设项目开工奠基

Groundbreaking of the construction project of Alphascope new factory.

2022

柔性传动柱装置运用于北京冬奥会和冬残奥会开闭幕式

The application of Column Lift in the opening and closing ceremonies of the Beijing Winter Olympics and Winter Paralympics.

2023

新厂区建设完成并投入运行，开启“首域装备，装备世界”新篇章。

The construction of the new factory is completed and put into operation, marking the beginning of a new chapter of "Alphascope Equipment, Equip World".

## 1. 概述

柔性传动柱装置具备以下主要特点:

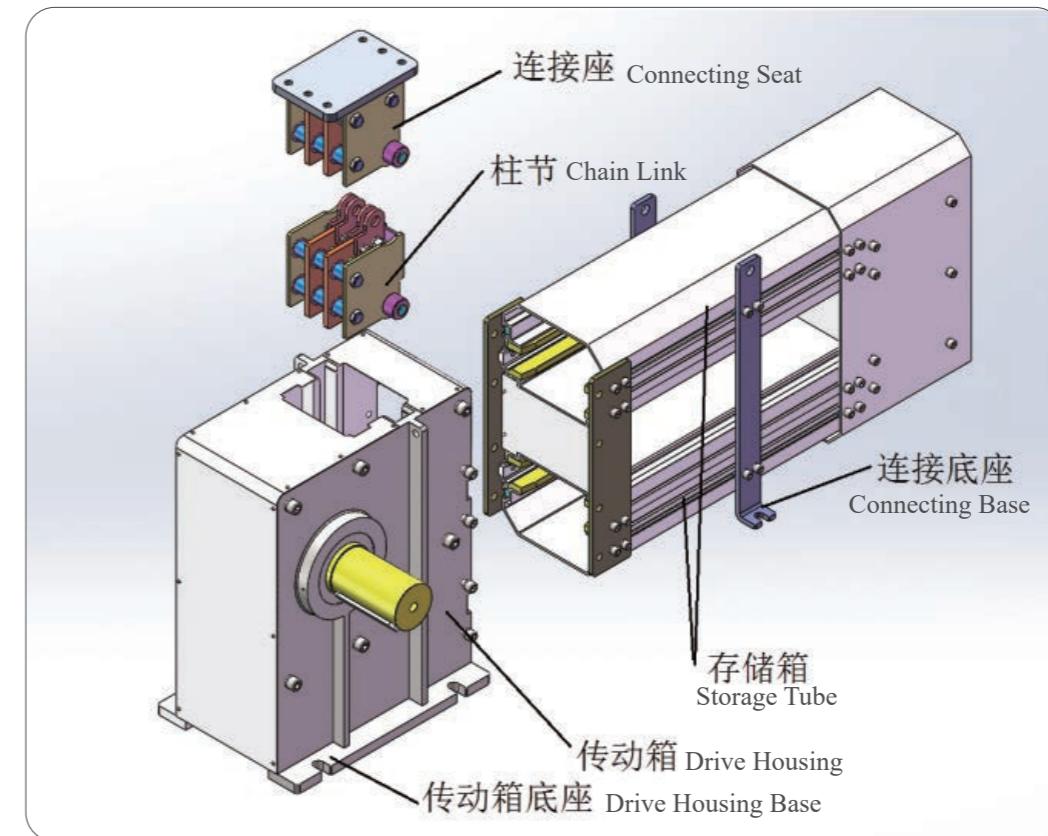

- 1) 将水平运动的柱节通过传动箱转换成垂直运动，实现垂直升降。
- 2) 把柔软的柱节转变为具有单向刚度的柱节，刚性柱节之间用活动铰接连接，形成垂直的刚性立柱承受垂直载荷。
- 3) 运行平稳、可靠性强、寿命长、维护成本低，重复定位精度高，配置灵活，安装方便，适用于重载荷（单根柔性传动柱最大动载荷 60吨、静载荷90吨以上）、浅基坑大行程（最大行程可达16m以上）。

## 1. Overview

Column Lift has the following main features.

- 1) Convert a horizontally moving chain link to a vertical movement through drive housing to achieve vertical lift.
- 2) Transform the soft chain link into the one with uni-directional stiffness, and connect the rigid chain link with movable hinges to form a vertical rigid column that bears vertical loads.
- 3) Stable operation, strong reliability, long service life, low maintenance costs, high repeatability, flexible configuration, easy installation, suitable for heavy loads (maximum dynamic load of 60tons and static load of 90tons for a single Column Lift), shallow pit and large stroke (maximum large stroke up to 16m or more).

## 2. 应用范围

柔性传动柱主要为浅基坑、大行程的传动提供解决方案，可用于特定生产线的升降，替代传统的剪刀撑、螺旋丝杆、液压缸、柔性齿、大螺旋及刚性链等产品，也可为新型领域提供高质可靠的传动方式。

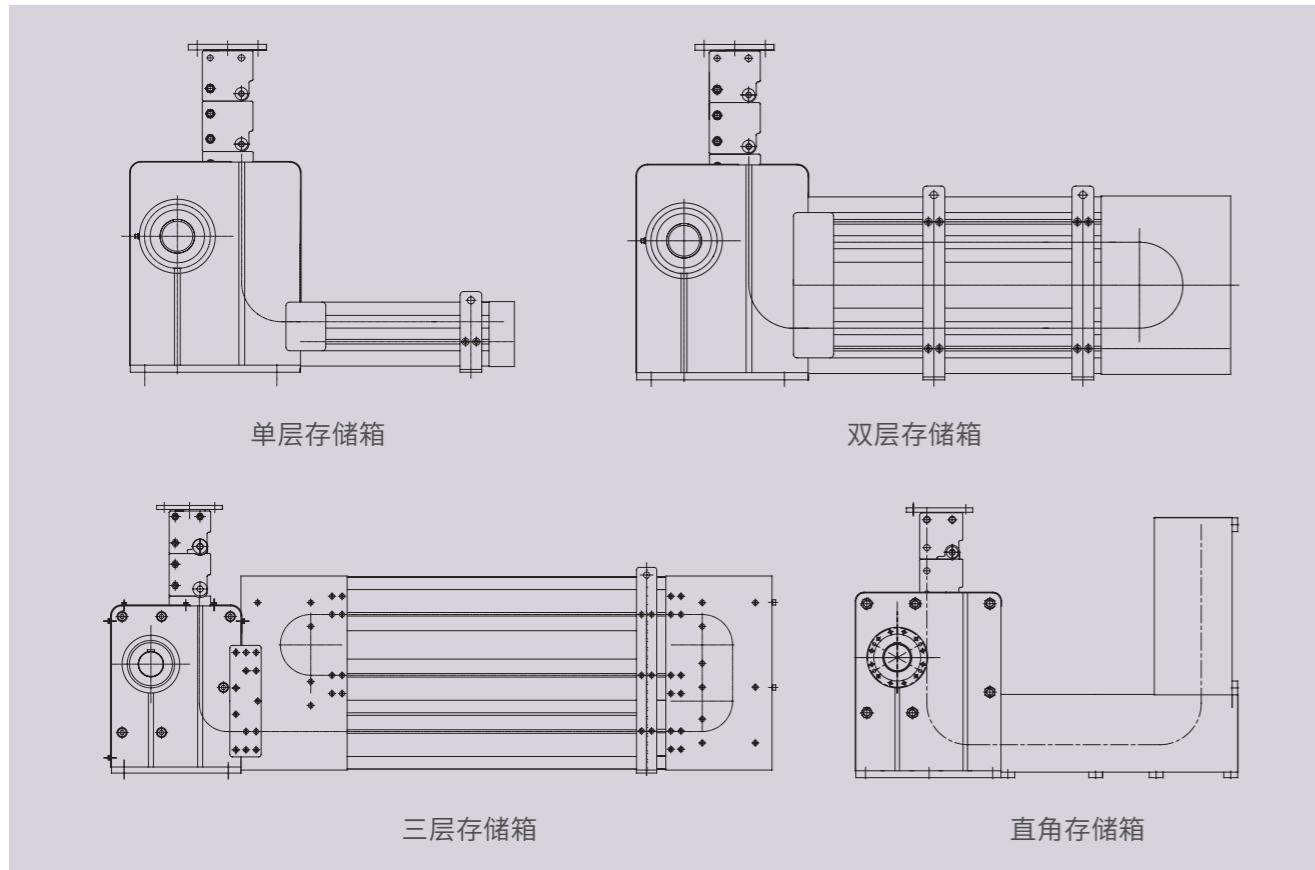

## 2. Application Range

Column Lift is a solution for the transmission of the short pit and large stroke, which can be used for the lifting of specific production lines, replacing traditional scissor supports, spiral screws, hydraulic cylinders, flexible gears, large spirals and rigid chains. It can be used for new fields where high quality and reliable transmission are required.

### 3. 柔性柱组成及形式

柔性传动柱由柱节连接座、若干节柱节组件、柱节传动箱和柱节存储箱组成。

柱节存储箱有单层、双层、直角和三层等多种形式，其中直角存储箱和三层存储箱可以选择双层与单层存储箱结合使用，具体请致电本公司垂询。

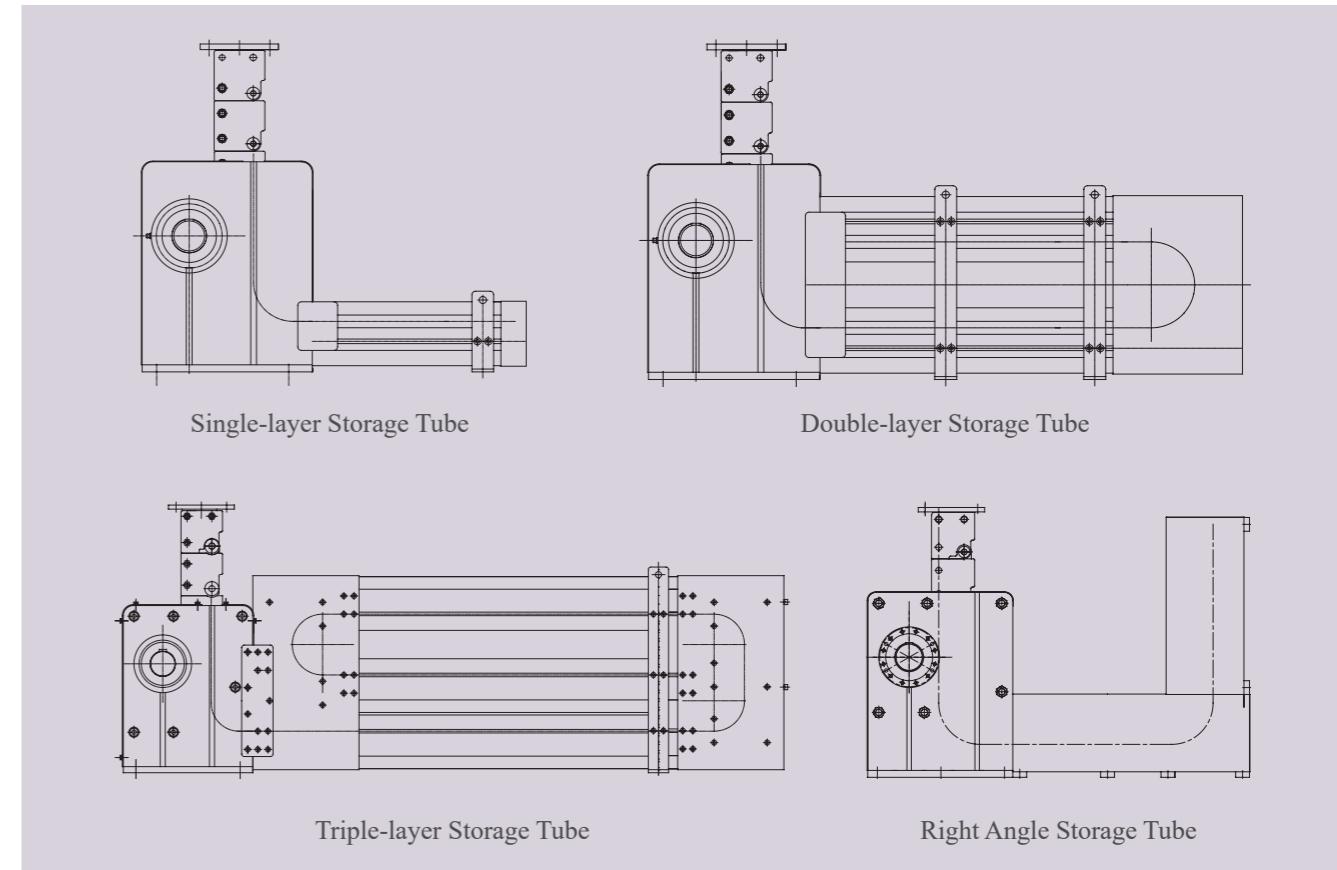

### 4. 技术参数

#### 性能参数

- 速度：最大速度0.30m/s，详见各型号柔性柱参数。
- 垂直度要求:  $S \leq 1m$ , 为 $\pm 1mm/m$   
 $1m < S < 2m$ , 为 $\pm 1mm/m$ 、 $\pm 2mm/\text{全行程}$   
 $S > 2m$ , 为 $\pm 1mm/m$ 、 $\pm 3mm/\text{全行程}$
- 传动效率：0.78~0.85
- 噪音情况：在速度为0.10m/s的情况下，噪音<35~50分贝（在0.1m/s速度，离1m处测得）
- 重复定位精度：<  $\pm 1 mm$
- 加速度:<  $0.3m/s^2$

### 3. Column Lift Composition and Form

Column Lift consists of chain link connecting seat, chain links, a drive housing and a storage tube. Storage tubes come in various forms, including single-layer, double-layer, right angle, and three-layer. Right angle storage tubes and three-layer storage tubes can be used in combination with double-layer and single layer storage tubes. Please call us for more information

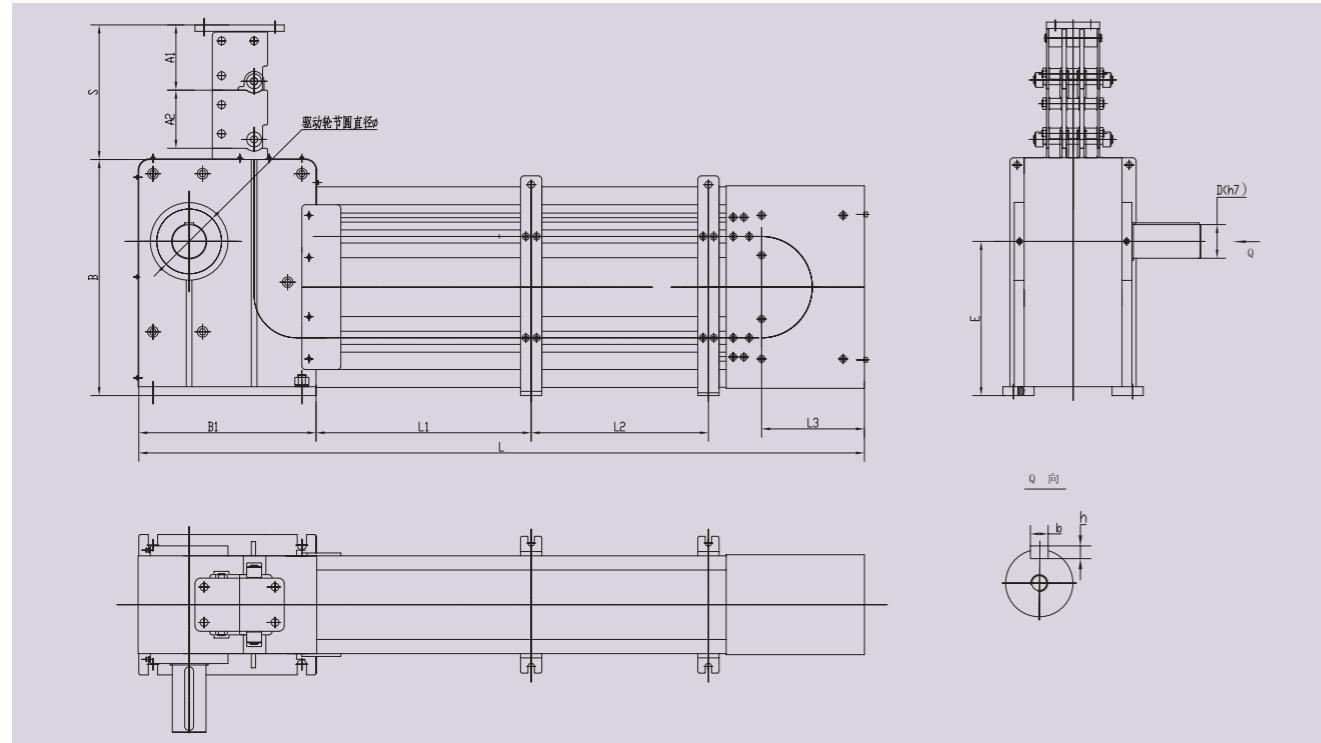

### 4. Technical Parameters

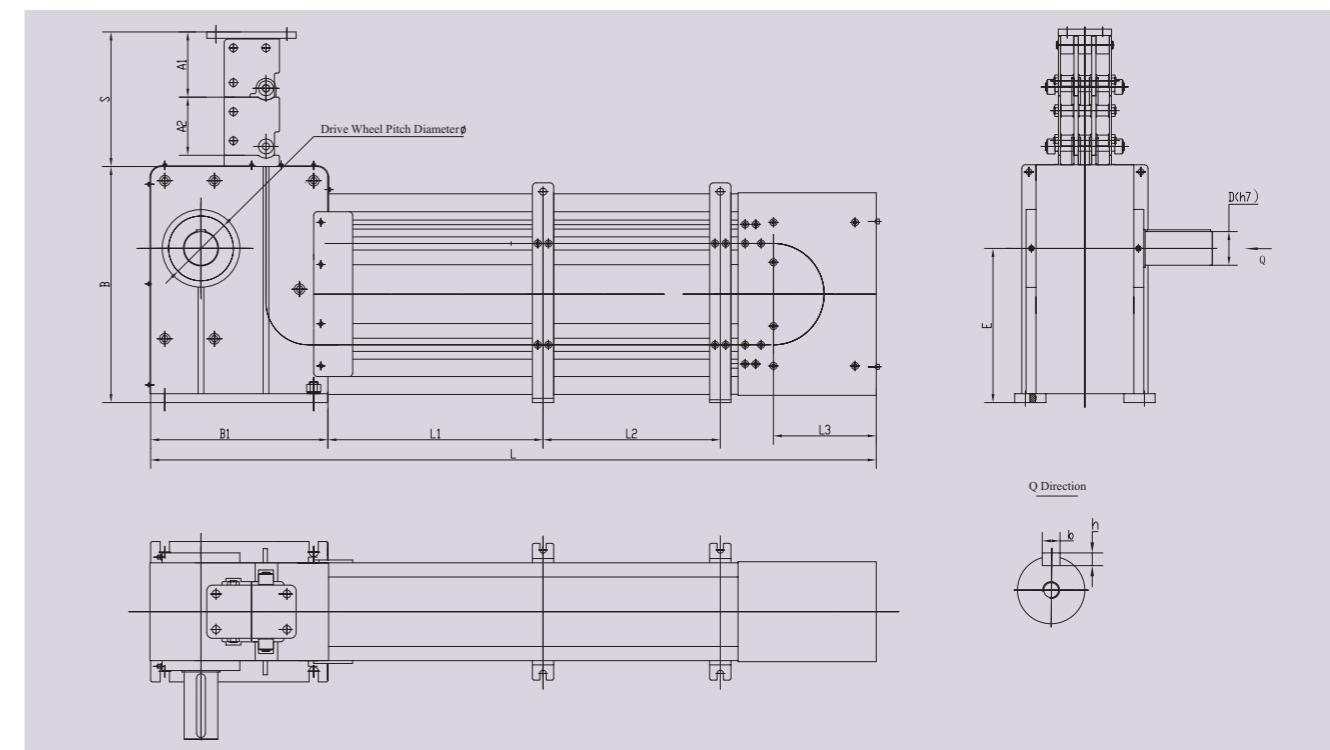

#### Performance parameters

- Speed: max speed 0.30m/s, Please refer to the parameters of each model of Lift for details.
- Required perpendicularity:  $\pm 1mm/m$  if  $S \leq 1m$   
 $\pm 1mm/m$ ,  $\pm 2mm/\text{full travel}$  if  $1m < S < 2m$   
 $\pm 1mm/m$ ,  $\pm 3mm/\text{full travel}$  if  $S > 2m$
- Transmission efficiency: 0.78 ~ 0.85
- Noise condition: <35~50 dB at a speed of 0.10m/s (measured at 0.1m/s, 1m away)
- Repeated positioning accuracy: <  $\pm 1 mm$
- Acceleration: <  $0.3m/s^2$

	Please call us for confirmation when selecting model of this color parameters.				The color or above parameters can be selected according to the design.										

说明: 1) 柱节总长度 = 行程 + 升、降余量。2) 为减少振动, 在柱节连接座与结构体之间增加一块橡胶垫, 橡胶垫厚度与柱节连接座连接板厚度相当。3) 表中为选型参考值, 如导向系统安全可靠, 行程、载荷可适当提高, 但最大承载能力不变。

Note: 1) Total length of chain link = stroke + lifting margin. 2) To reduce vibration, add a rubber pad between the chain link connecting seat and the structural body. The thickness of the rubber pad is equivalent to the thickness of the chain link connecting plate. 3) The table is a reference value for model selection. If the guiding system is safe and reliable, the stroke and load can be increased appropriately, but the maximum bearing capacity remains unchanged.

## 6. 柔性柱选型

- 1) 载荷、柱节总长度关系参见《柱节总长度、动载荷参数》和《柱节总长度、静载荷参数》。
- 《传动几何参数》表中的数据为柔性柱升降的建议余量，如速度增加，应根据制动时间（加减速）计算实际的安全余量。
- 2) 柱节总长度计算：
- 行程： LH
  - 升、降余量： Ly
  - 柱节总长度：  $S=LH+Ly=A1+Q \times A2$ 。  
A1为头节柱节长度，A2为柔性柱柱节长度，Q为圆整的柔性柱柱节数量。
  - 柔性柱长度L： 参见柔性柱外形尺寸表。  
上升余量：升降台（机）往上运行到预定（终点）位置后还允许的最大安全上升位移。  
下降余量：升降台（机）往下运行到预定（起始点）位置后允许的最大安全下降位移。  
升、降余量=上升余量+下降余量。
  - 在设计、安装时需注意，为减少振动在柱节连接座与结构体之间增加一块橡胶垫，用于吸收振动，橡胶垫厚度与柱节连接座连接板厚度相当。

## 6. Model Selection

- 1) Please see "Pitch of chain link, dynamic load parameters" and "Pitch of chain link, static load parameters for the relationship between load and total length of chain link."
- The data in the table "Transmission geometrical parameters" are the recommended lifting margins for Column Lift. If the speed increases, the actual safety margins should be calculated according to the braking time (acceleration and deceleration).
- 2) Calculation of total length of chain link:
- Stroke: LH
  - Lifting margin: Ly
  - Total length of chain lift:  $S=LH+Ly=A1+Q \times A2$ .  
A1 is the pitch of the first chain link, A2 is the length of chain link and Q is the rounding number of chain link.
  - Length of Column Lift L: refer to the table of column lift dimensions.  
Upward margin: Maximum safe upward displacement after lifting platform has reached its intended (end) position.  
Descent margin: Maximum safe descent displacement after the lifting platform has run down to a predetermined (starting point) position.  
Lifting margin = upward margin + descent margin. During design and installation, it should be noted that in order to reduce vibration, a rubber pad is added between the chain link connecting seat and the structural body to absorb vibration.
  - The thickness of the rubber pad is equivalent to the thickness of the chain link connecting seat connection plate.

8.00				24.5	59.0				24.5	59.0
8.50					50.0					50.0
9.00					43.0					43.0
9.50					36.0					36.0
10.00					30.0					30.0
横向弯矩 M TBM (kN.M)	2	4	6	8	12	3	5	8	10	15

说明：1、选型时动静载荷必须包含柱节自身重量。如动载荷为100kg，柱节重量20kg，则刚性柱的动载荷为120kg。2、水平载荷对基础面产生的弯矩超过横向弯矩数值，必须像柔性柱一样增加类似升降台导向系统。

Note: 1. When selecting model, the dynamic and static loads must include the weight of chain link itself. If the dynamic load is 100kg and the weight of chain link is 20kg, the dynamic load of the rigid column lift is 120kg. 2. If the bending moment generated by the horizontal load on the foundation surface exceeds transverse bending moment value, a guide system is necessary.

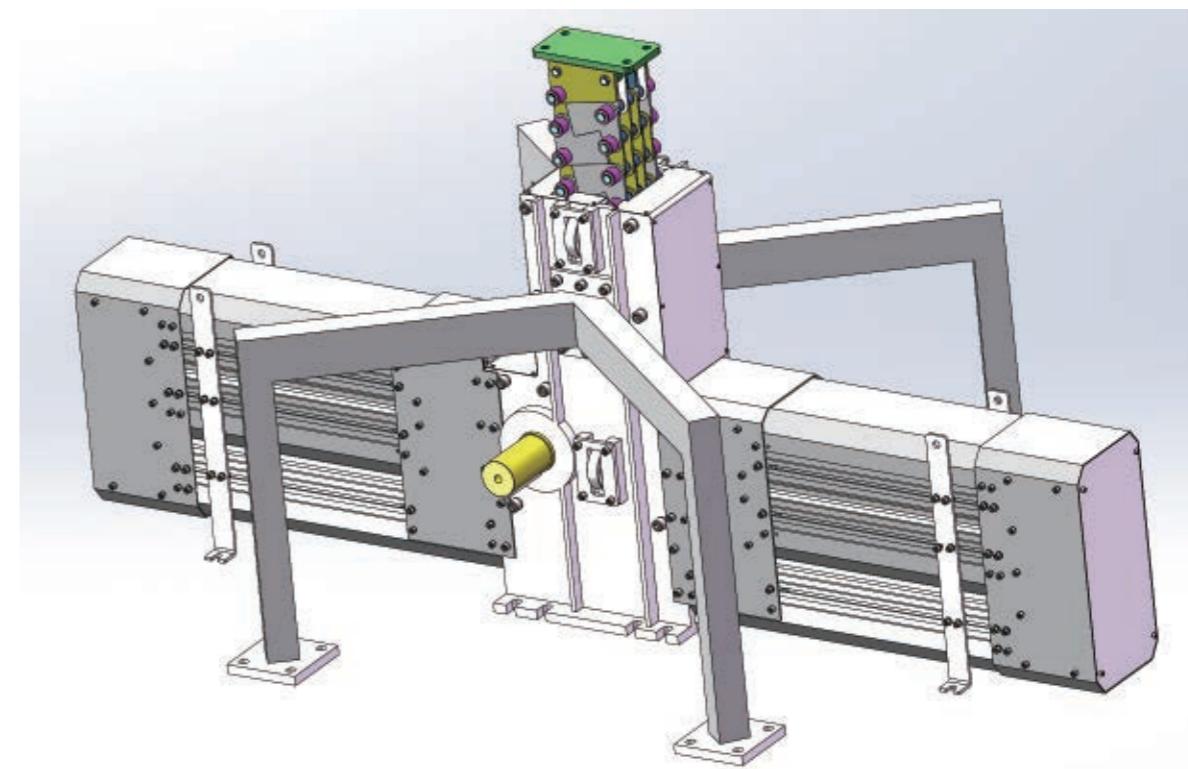

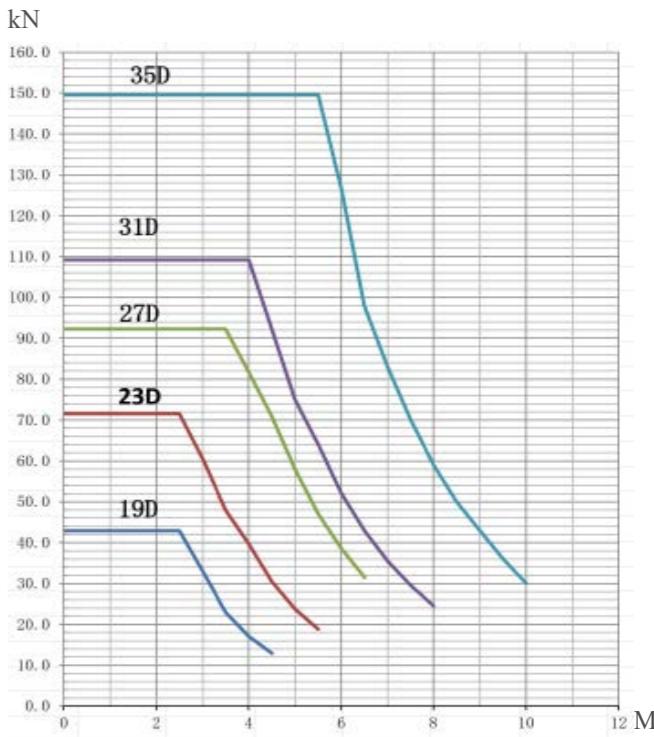

### 柱节总长度-动载荷曲线

#### Pitch of RCL-Dynamic Curve

### 柱节总长度-静载荷曲线

#### Pitch of RCL-Static Curve

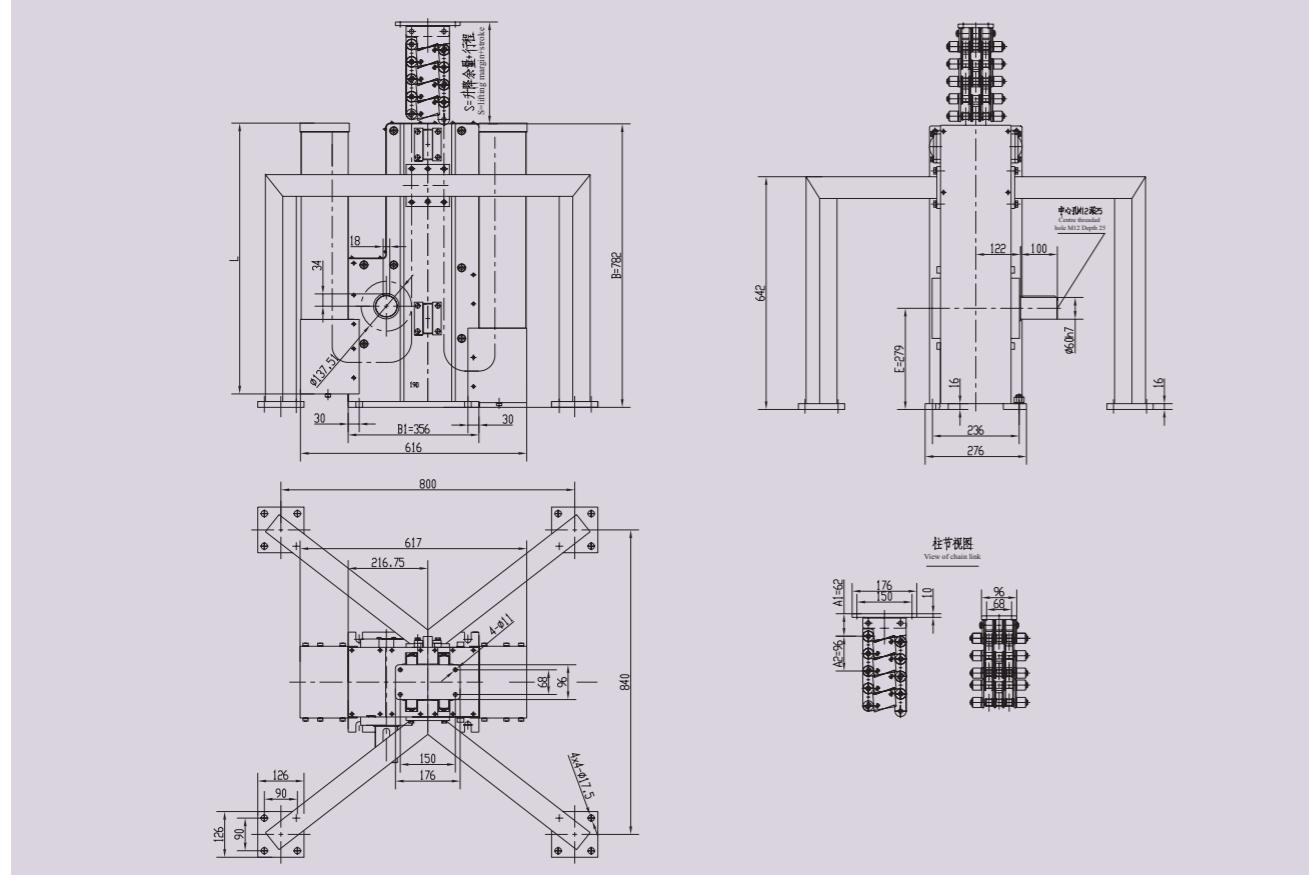

注意：如有升降台的导向系统，刚性柱的支架可不装。

Note: If there is a guide system for the lifting platform, the rack for RCL is unnecessary.

## 9. 使用要求

- 柔性柱安装应由具备机械安装资质的技术人员完成。
- 安装人员必须遵守柔性柱限定的安装参数及性能要求。
- 参数、载荷行程和速度不应超过选用柔性柱的规定参数。
- 当柔性柱运行到最低位置时，柔性柱的连接座不应与传动箱上表面接触，当运行到柔性柱的警示线——黄线必须减速，当运行到最大行程时不应超过柔性柱标识的红线（停止线），如右图所示。
- 任何维护工作都应由符合资质的技术人员完成。
- 任何被拆除的安全装置，在恢复重启之前，必须重新安装在升降系统中。
- 运行前必须安装好限位、极限位开关，避免操作失误的事故发生。
- 在运行前，必须安装足够强的升降导向系统。
- 柔性柱不允许直接举升人员，如有特殊要求，请致电垂询确认。

## 9. Operation Requirements

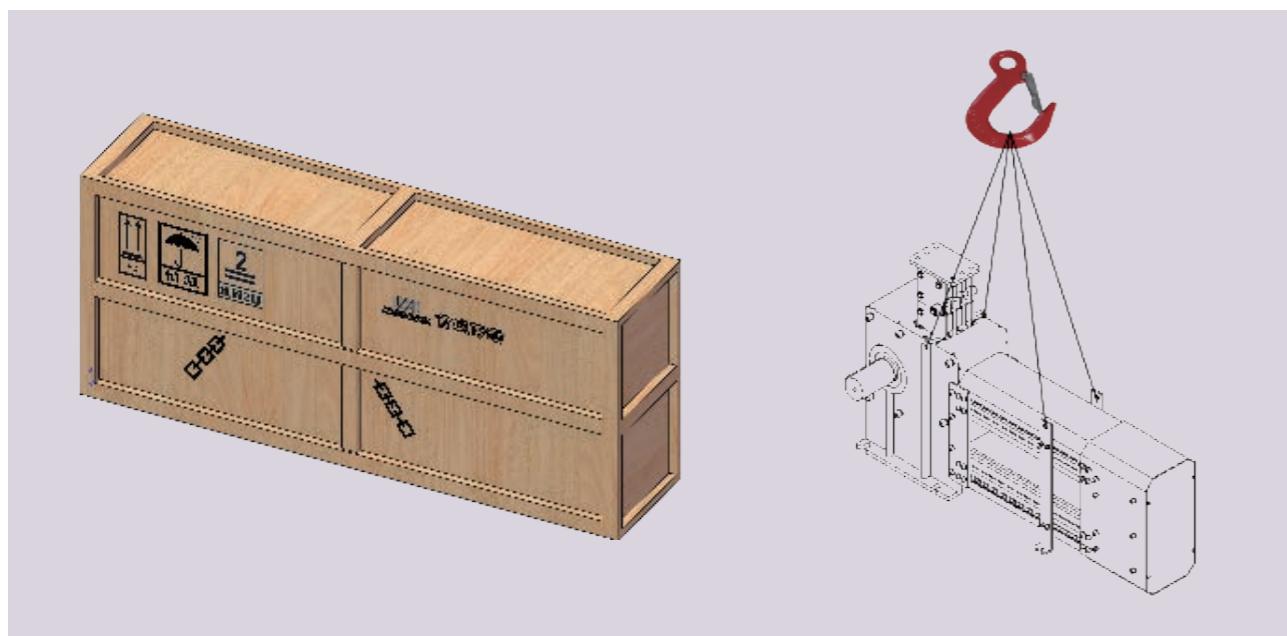

- The installation of Column Lift should be carried out by technicians with mechanical installation qualifications.
- Installation personnel must comply with the installation parameters and performance requirements specified for Column Lift.
- The parameters, load, stroke and speed should not exceed those specified for Column Lift selected.
- When Column Lift reaches its lowest position, the connecting seat should not be in contact with the upper surface of drive housing. When reaching the warning line of Column Lift - the yellow line - it must slow down. When reaching the maximum stroke it should not exceed the red line (stop line) marked on Column Lift, as shown in the diagram on the right.
- Any maintenance work should be carried out by a qualified technician.
- Any removed safety devices must be reinstalled in the lifting system before resuming restarts.
- Limit switch and extreme limit switch must be installed before operation to avoid accidents caused by operating errors.
- Before operation, a sufficiently strong lifting guide system must be installed.
- Column Lift does not allow direct lifting of personnel. Please call us for confirmation if you have special requirements.

## 10. 吊装和安装

起重吊装时应注意以下情况：

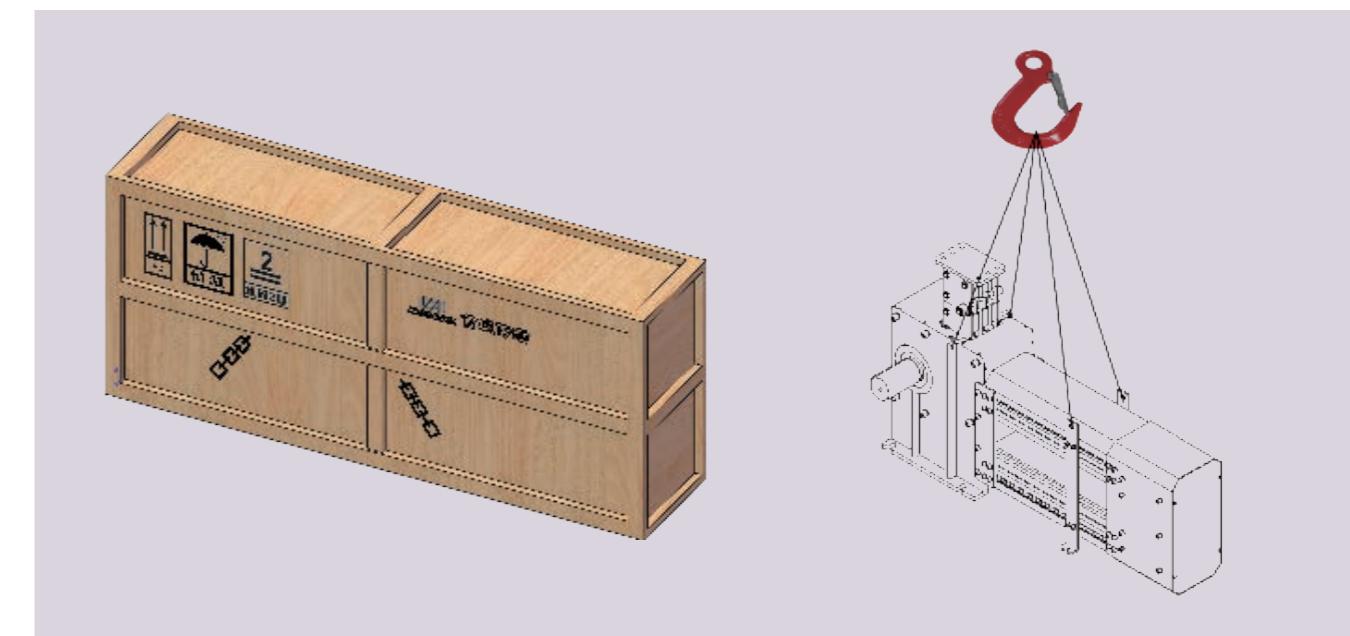

- 吊装前，找好运输箱的正确方向放平，然后拆箱。
- 四吊点平衡起吊，严禁两点起吊。

## 10. Lifting & Installation

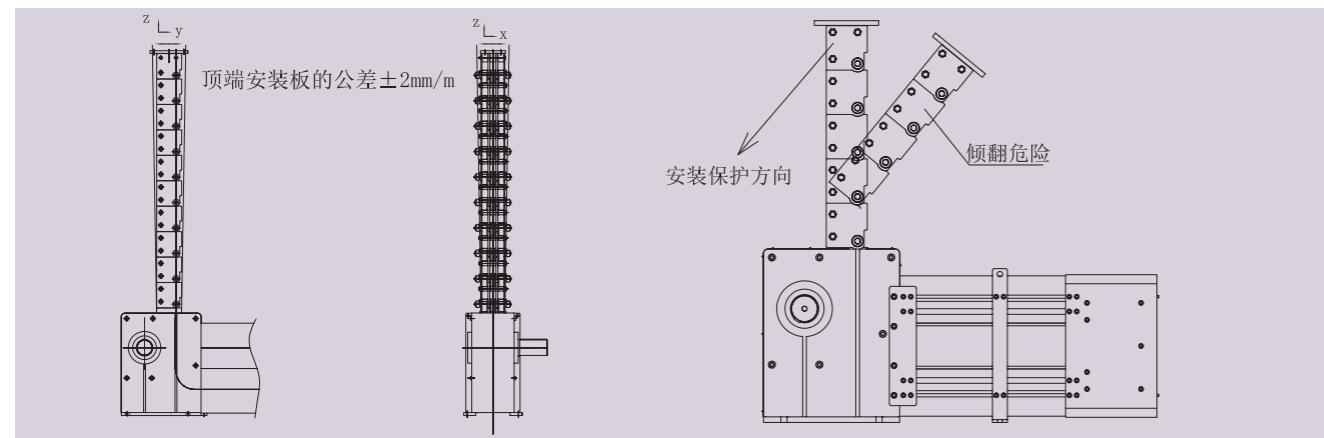

Attention should be paid to the following situations when lifting and hoisting.

- Before lifting, find the correct direction for the packing case and lay it flat, then unpack it.
- Balanced lifting at four points shall be obeyed while two-point lifting is strictly prohibited.

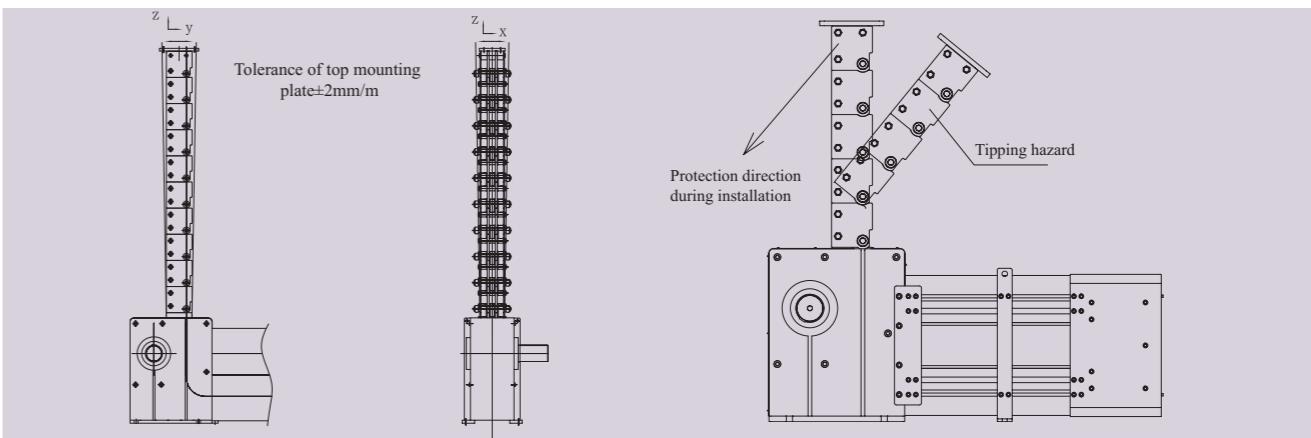

为了保证柔性传动柱装置的稳定性和优化的性能，安装时必须遵照以下要求：

- 在柱节连接座与结构体之间增加一块橡胶垫，橡胶垫厚度与柱节连接座连接板厚度相当。
- 顶端的安装板必须与升降台呈刚性连接，柱节连接座与结构体的连接位置的螺栓等级为8.8级，正常情况下不提供旋转附件（如有特殊需求，请致电垂询）。
- 传动箱必须与基座牢固地连接，不能有任何间隙，且必须与顶部的安装板在水平方向平行，传动箱与地面结构连接时的螺栓等级为8.8级。
- 柱节存储箱与地面结构连接时的螺栓等级不小于4.8级。
- 载荷的传送路径必须是垂直的，并且与柔性柱平行。
- 传动箱安装水平方向找正：以传动箱上面做基准，允差小于0.5mm。
- 柔性柱垂直找正：以柱节导向滚子圆面和柱节链板侧面做基准，对垂直度和扭曲度进行检验。
- 垂直度：
  - 1)  $S \leq 1m$ , 为 $\pm 1mm/m$
  - 2)  $1m < S < 2m$ , 为 $\pm 1mm/m$ 、 $\pm 2mm$ /全行程
  - 3)  $S > 2m$ , 为 $\pm 1mm/m$ 、 $\pm 3mm$ /全行程
- 设备安装过程中对柔性柱和传动箱进行覆盖、保护，以免异物进入或者污染。
- 升降台必须安装与柔性柱方向一致的导向系统，不允许有水平方向的运动。
- 柔性柱由柱节通过轴组装起来，所有的零部件都经过了预先润滑，具有抗腐蚀性的作用。
- 为确保使用时杂物不卷入传动箱内影响传动，柱节内的滚子可用重型齿轮油润滑，不建议使用润滑脂。环境较好的工况可以在滚子链上加少量的润滑脂润滑。
- 柔性柱为单向刚性体，安装必须避免下图出现的危险。
- 通电试运行时，采用低速、点动以确认运行方向；上行程限位开关调整到最低，下行程开关调整到最高，运行顺畅后逐步调整行程开关到正确位置；调整下限位时，不得超出柱节尾部红色的警示线。
- 柱节连接座在下降到最低位置时，与滚子链传动箱之间预留足够的缓冲空间。柱节连接座在上升到最大高位置时，也需留出足够的余量，速度越快预留的余量越多，确保柔性柱运行安全。
- 为了保证柔性传动柱装置的运行安全，在运行前，必须安装保护用的安全行程开关，建议安全行程开关信号反馈到控制系统并显示。
- 柔性柱不能承受大的水平载荷，类似升降机或升降台等设备存在侧向载荷必须安装足够强的导向系统，如导轨、剪刀撑、导向柱等。
- 多组柔性传动柱装置安装时，优先考虑对称安装，有助于升降机或升降台的整体稳定性。

In order to ensure the stability and optimized performance of Column Lift, the following requirements must be followed during :

- Add a rubber between the chain link connecting seat and the structural body, with a thickness equivalent to that of the chain link connecting seat connecting plate.
- The top mounting plate must be rigidly attached to the lifting platform. The bolt grade for the attachment position of the column joint attachment seat to the structure is grade 8.8. Rotating accessories are not provided under normal circumstances (please call for inquiries due to special needs).
- The drive housing must be firmly attached to the base without any gaps and must be parallel to the top mounting plate in the horizontal direction. The bolt grade of connecting storage tube to the ground structure shall not be less than 4.8.
- The transmission path of the load must be vertical and parallel to Column Lift.
- Horizontal alignment of drive housing: use the top of the drive housing as a benchmark, with a tolerance of less than 0.5mm.
- Vertical alignment of Column Lift: use the circular surface of chain link guide roller and the side of the chain link plate as the benchmark to check the verticality and torsion.
- Perpendicularity.
  - 1)  $\pm 1mm/m$  if  $S \leq 1m$
  - 2)  $\pm 1mm/m$ ,  $\pm 2mm$ /full travel if  $1m < S < 2m$
  - 3)  $\pm 1mm/m$ ,  $\pm 3mm$ /full travel if  $S > 2m$
- Cover and protect Column Lift and drive housing during equipment installation to avoid the entry of other objects or contamination.
- The lifting platform must be equipped with a guiding system that is consistent with the direction of Column Lift, and horizontal movement is not allowed.
- Column Lift is assembled by chain link through shafts. All components and parts are pre-lubricated for corrosion resistance.
- To prevent the sundries from falling into drive housing, the rollers in the chain link can be lubricated with heavy duty gear oil. Lubricating grease is not recommended. A small amount of grease can be added to the roller chain for lubrication under good working conditions
- Column Lift is an unidirectional rigid body and installation must avoid danger from appearing as shown in the picture below.
- During powered on trial operation, use low speed and jogging to confirm the operation direction. Adjust the upper travel limit switch to the lowest position, the down travel switch to the highest position, and gradually adjust the travel switch to the correct position after smooth operation. When adjusting the lower limit, do not exceed the red warning line at the end of the chain link.
- When chain link connecting seat is lowered to the lowest position, sufficient buffer space is reserved between connecting seat and the roller chain drive housing. When chain link connecting seat rises to the highest position, sufficient margin should also be left. The faster the speed, the more margin should be reserved to ensure the safe operation of Column Lift.
- In order to ensure the safe operation of Column Lift, a safety travel switch for protection must be installed before operation. It is recommended that the safety travel switch signal should be fed back to the control system and displayed.
- Column Lift cannot bear large horizontal loads, and equipment such as elevators or lifting platforms must be equipped with sufficiently strong guiding systems, such as guide rails, scissor-truss and guiding columns, when subjected to lateral loads.
- When installing multiple sets of Column Lift, priority should be given to symmetrical installation, which helps to ensure the overall stability of the elevator or lifting platform.

## 11. 维护

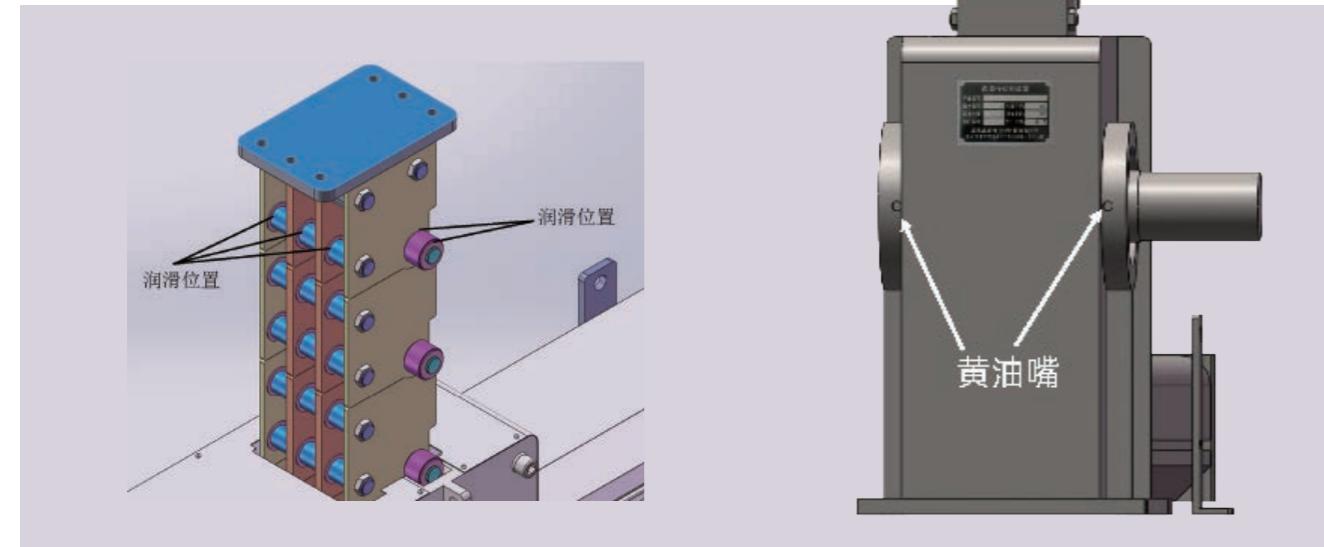

- 柔性传动柱装置在多次试运行后，需调整柔性柱的垂直度，保证柱节正常入传动箱；根据运行使用情况定期检查，检查的方法同安装时的找垂直方法。
- 柔性柱加注少量的重型齿轮油润滑，柱节表面和滚子及滚子套刷油进行润滑和防锈，见左下图。
- 累计运行500小时后，传动箱油嘴加注润滑脂（3#锂基脂），见右下图。
- 每隔3个月检测柔性柱的垂直度，保证柔性柱的垂直度在使用范围内。
- 检查螺栓等紧固件的紧固情况。

## 11. Maintenance

- After multiple trial runs of Column Lift, the verticality of lift needs to be adjusted to ensure that chain link enters the drive housing normally. Regularly inspect according to operation and usage, and the inspection method is the same as the vertical alignment method during installation.
- Column Lift is lubricated with a small amount of heavy duty gear oil and the chain link surface and rollers and roller sleeves are applied with oil for lubrication and rust prevention. See picture below on the left.
- After a total of 500 hours of operation, add lubricating grease to the oil nozzle of driving case (3# lithium grease). See picture below on the right.
- Check the verticality of Column Lift every 3 months to ensure that it is within the range of use.
- Check the tightness of bolts and other fasteners.

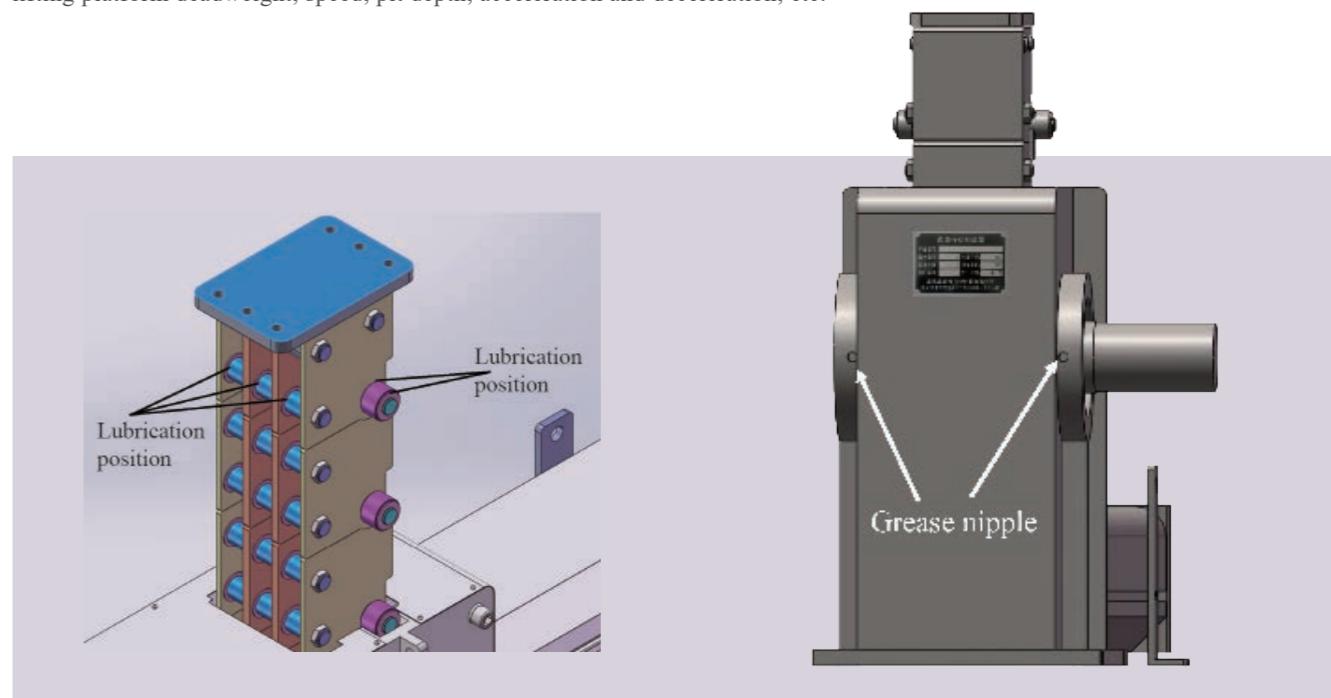

## 12. 订购所需技术参数

我们会仔细研读每个订单，并确保所提供的升降系统完全符合您的要求。为此，我们需要您提供以下信息：升降台尺寸、有效行程、行程余量、静载荷、动载荷、升降台自重、升降速度、基坑深度、加速和减速等。

## 12. Technical Parameters Required for Ordering

We will carefully study each inquiry and order to ensure that the lifting system provided by us fully meet clients' requirements. Please provide the following information: lifting platform dimensions, effective stroke, stroke allowance, static load, dynamic load, lifting platform deadweight, speed, pit depth, acceleration and deceleration, etc.

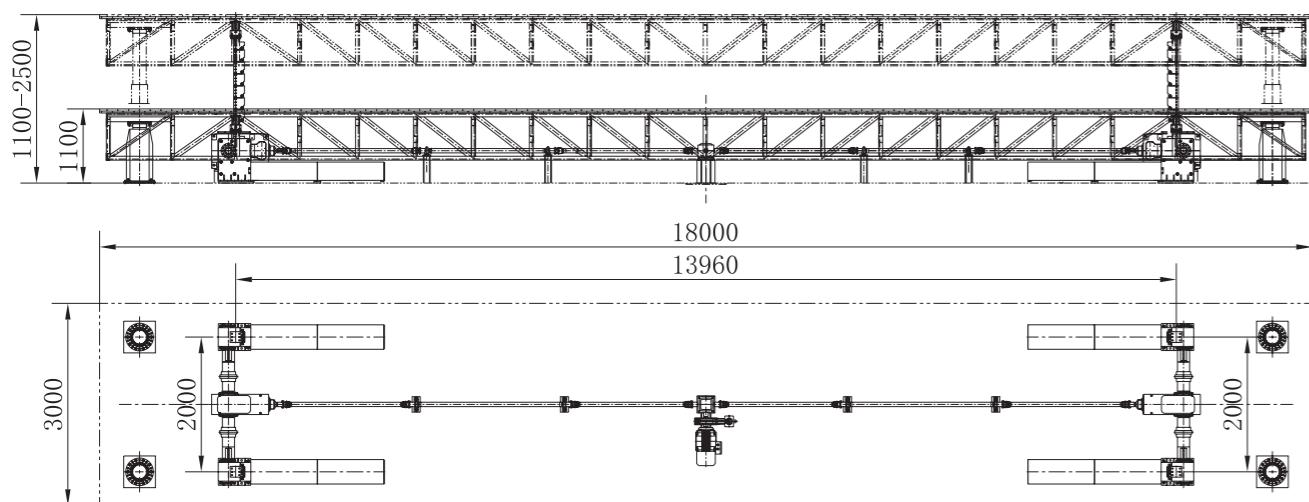

## 13. 设计案例

### 经典案例一

#### 1) 技术参数:

台面尺寸	18×3m, 有效面积 : 54m <sup>2</sup>
基坑的深度 (m)	1.1
工作行程 (m)	1.4
动载荷 (kN/m <sup>2</sup> )	1.00
静载荷 (kN/m <sup>2</sup> )	4.00
速度 (m/min)	6
导向系统	两级导向柱或剪刀撑
设备布置	见图

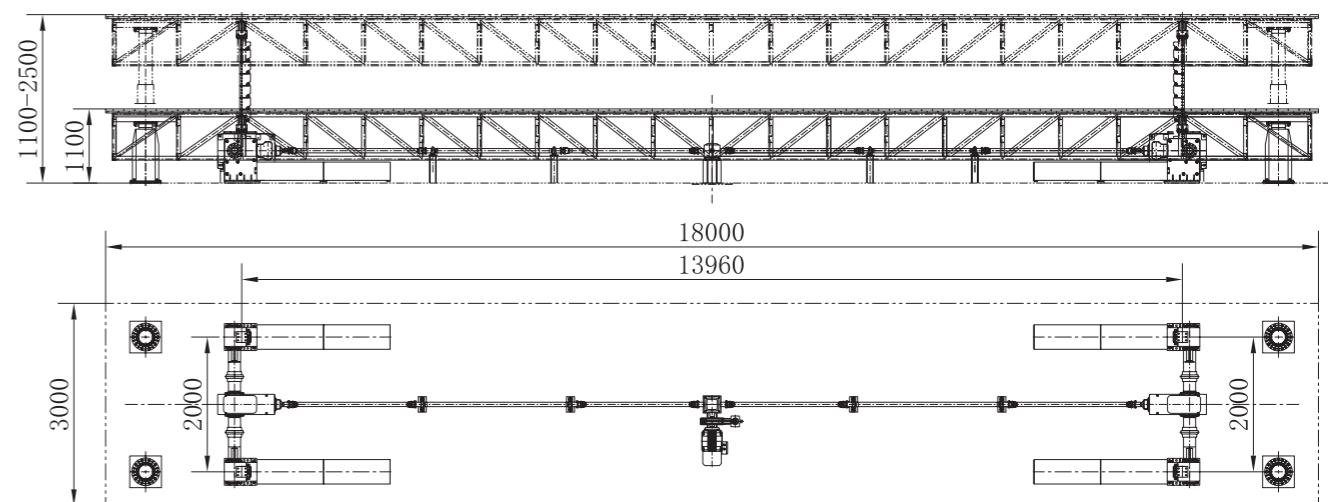

导向柱导向

## 13. Sample Proposal

### Typical Case 1

#### 1) Technical parameters:

Platform size	18×3m, effective area : 54m <sup>2</sup>
Depth of foundation pit (m)	1.1
Working stroke (m)	1.4
Dynamic load (kN/m <sup>2</sup> )	1.00
Static load (kN/m <sup>2</sup> )	4.00
Speed (m/min)	6
Guiding system	Two-stage guiding post or scissor-truss
Equipment layout	See picture for reference.

Guided by guiding post

## 2) 计算与选型:

动载荷 (kN)	$54 \times 1.00=54$
每平米结构载荷 (kN/m <sup>2</sup> )	2
结构自重载荷 (kN)	$54 \times 2.0=108$
总动载荷 (kN)	$54+108=162$
每根柔性柱动载荷 (kN)	$162/4=40.5$
静载荷 (kN)	$54 \times 4.0=216$
总静载荷 (kN)	$108+216=324$
每根柔性柱静载荷 (kN)	$324/4=81$
设计柱节总长度=行程+升降余量	$1400+500=1900(\text{mm})$
柱节组件数量 Q	$1900/144=113.19$ , 取 13 节 (含头节)
订货时的柱节总长度	$S=162+12 \times 144=1890\text{mm}$
最终动载荷 (KN)	$40.5+1.89 \times 57.24/100=41.58$
最终总静载荷 (kN)	$81+1.89 \times 57.24/100=82.08$

- 在该柱节总长度 1890mm 时, 27A 载荷情况如下:

动载荷 (kN):  $78>41.58$

静载荷 (kN):  $94>82.08$

选型后的升降余量:  $1890-1400=490$  (mm)

注意: 当速度缓慢时, 柱节数量可选 12 节 (含头节), 相应的升降余量会减少 144mm, 成本也会降低。

- 安装尺寸见 27A 柔性柱

## 3) 订货:

订货标示: 27A-S-1890-L-M两套, 27A-S-1890-R-M两套。

## 2) Calculation and selection:

Dynamic load (kN)	$54 \times 1.00=54$
Structural load per m <sup>2</sup> (kN/m <sup>2</sup> )	2
Deadweight of structure (kN)	$54 \times 2.0=108$
Total dynamic load (kN)	$54+108=162$
Dynamic load per each Column Lift (kN)	$162/4=40.5$
Static load (kN)	$54 \times 4.0=216$
Total static load (kN)	$108+216=324$
Static load per each Column Lift (kN)	$324/4=81$
Designed pitch of chain link = stroke + lifting margin	$1400+500=1900(\text{mm})$
Number of chain link Q	$1900/144=113.19$ , taking 13 chain link (including the first chain link)
Actual pitch of chain link	$S=162+12 \times 144=1890\text{mm}$
Final dynamic load (KN)	$40.5+1.89 \times 57.24/100=41.58$
Total final static load (kN)	$81+1.89 \times 57.24/100=82.08$

- At a total pitch of 1890mm for this Column Lift, Model 27A load is as follows:

Dynamic load (kN):  $78>41.58$

Static load (kN):  $94>82.08$

Lifting margin:  $1890 - 1400 = 490$  (mm)

Note: The number of chain link can be selected as 12 (including the first link) at a low speed. The corresponding lifting margin will be reduced by 144mm, which will also reduce the cost.

- See Model 27A Column Lift for mounting dimensions.

## 3) Ordering:

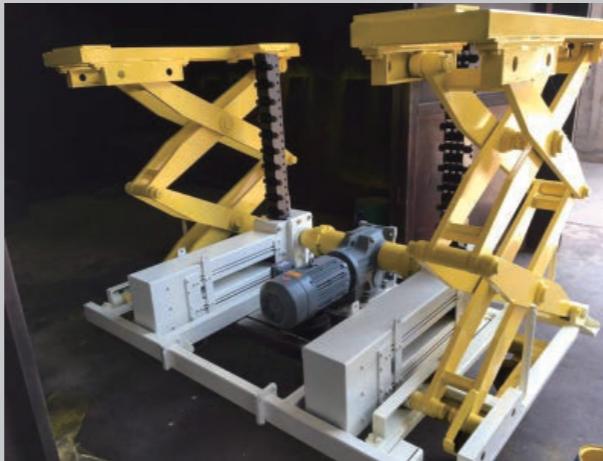

Order label: Two sets of 27A-S-1890-L-M, two sets of 27A-S-1890-R-M.

## 柔性柱产品及应用展示

## Display of Column Lift & Application

柔性柱系列产品  
Column Lift Series

工业生产线应用  
Industrial Production Line Project

无导向刚性柱演出效果  
Unguided Rigid Column Lift

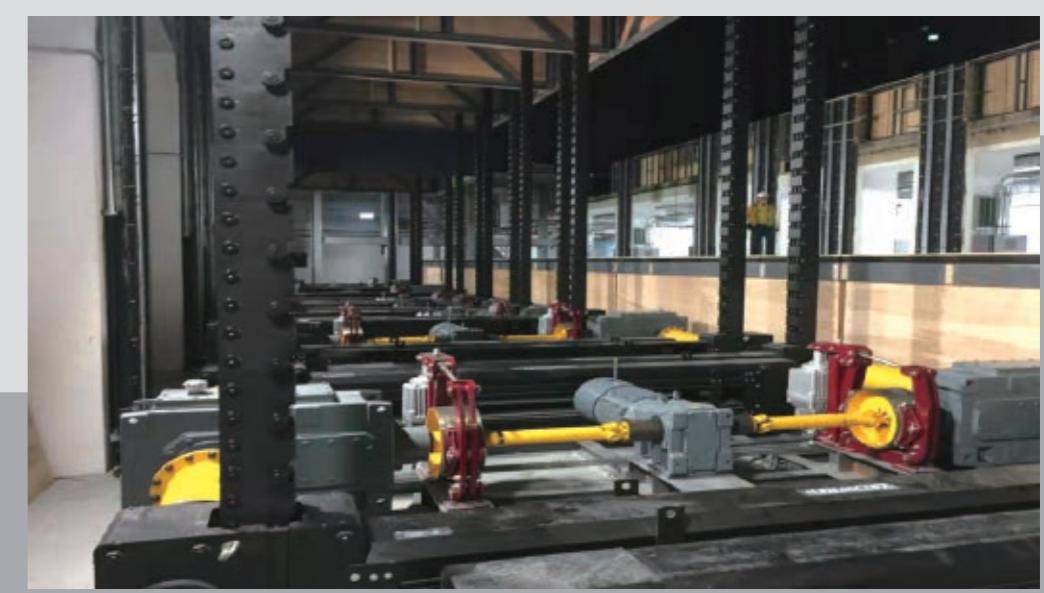

首域传动——专业研发、生产、经营，柔性传动柱装置；刚性传动柱装置；水平推拉传动装置；为客户提供安全可靠的传动系统

专注成就专业 精细铸就经久
