

NSF REG4 CERTIFICATION

Water manufacturers can now work directly with NSF to show compliance to Regulation 4.

Regulation 4(1)(a) of the Water Supply (Water Fittings) Regulations 1999 and similar legislation in Scotland and Northern Ireland specify requirements for water fittings installed within the boundary of a property. To allow plumbing products and materials to show compliance with these regulations, NSF International has developed NSF REG4, a certification scheme for the UK market.

Our ISO 17025-accredited [laboratory](#) in South Wales is one of the largest in the world, specialising in water fittings.

THE NSF SOLUTIONS

NSF offers two solutions that meet your needs:

- > **NSF REG4 1+**, which includes an annual facility audit requirement that enables a reduced level of retesting after five years
- > **NSF REG4 S3**, which does not have any facility audit requirements but mandates a full retest after five years

The scheme certifies mechanical products in contact with drinking water, such as valves, backflow prevention devices, taps, mixers, showerheads, pipes and fittings, tanks, cisterns, water meters and many others. NSF REG4 also certifies non-metallic materials for use in water fittings, such as plastics, rubbers, coatings, cements, resins and sealants.

WHY NSF REG4?

No formalised product assessment meeting

Shorter time frames for product listing

All certification decisions made by NSF

Reduced turnaround times, speeding market access
