

# Butterfly fire damper

## FDA-BU

### Description

The fire dampers are manufactured in the following nominal sizes: DN100, DN125, DN160, DN200. The fire dampers are equipped with a thermal fuse mechanism ensuring the damper switch to the safe position in case of reaching an ambient temperature equal to or higher than 72°C. The fire dampers allow using limit switches signalling closed position of the damper blade (1 limit switch) or blades (in case of using 2 limit switches).

The casing is made from galvanised steel sheet; the fire damper blade is made from a silicate cement board.

Version: 001/04/21/MC

#### Available labelling:

## Tests and certificates

- Fire resistance rating: EIS 120, EIS 90, EIS 60,
- Test method as per EN 1366-2:2015, classification method as per EN 13501-3+A1:2010P,
- Corrosion resistance as per EN 15650,
- EC declaration of conformity (EN 15650).

## Intended use and application

Circular fire dampers used in general ventilation, incorporated in the system at the point of passage through the building partition, are intended to reproduce the characteristics and protective functions of the partition. The fire damper blade remains open under normal operating conditions – it is closed automatically in the event of a fire.

Partition type	Minimum partition thickness [mm]
concrete ceiling	150
concrete wall	130
solid brick wall	130
cellular concrete block wall	130
plasterboard wall supported on a steel structure	130

Possible installation of fire dampers with any position of the rotation axis.

All necessary information is contained in the operation and maintenance manual.

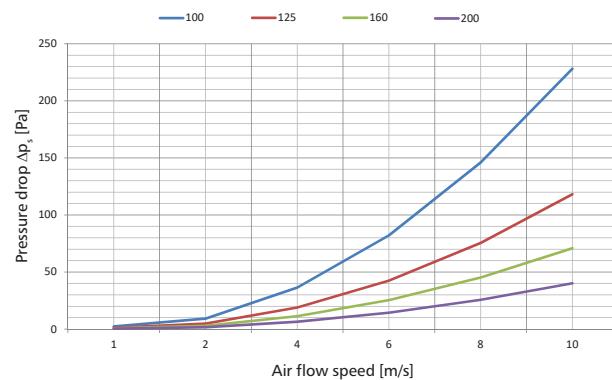

## Characteristics

The FDA-BU circular fire dampers are designed for use in general ventilation systems as a protection to prevent smoke and fire from spreading between separated adjacent fire zones.

The fire dampers are classified according to procedures included in PN-EN 13501-3+A1:2010P standard (Fire classification of construction products and building elements). The fire resistance was tested according to PN-EN 1366-2:2015 standard (Fire resistance tests for service installations - Part 2: Fire dampers). The entire manufacturing process meets the requirements of EN 15650:2010 standard. The FDA-BU fire dampers can be used in vertical building partitions providing fire resistance up to EI 120 class (ve  $\leftrightarrow$  o )S class (depending on building partition resistance class) and in horizontal building partitions providing fire resistance up to EI 90 class (ho  $\leftrightarrow$  o )S class (depending on building partition resistance class).

## Fire damper with air valve **FDA-BU-KN / FDA-BU-KW**

### Description

Shut-off fire dampers FDA-BU-KW and FDA-BU-KN series, used in general ventilation systems as protection against penetration of smoke and fire between separated adjacent fire zones. The fire damper is available in Ø 100, 125, 160, and 200 mm. The shut-off fire dampers can be used for passage of ventilation systems through vertical and horizontal building partitions, providing fire tightness class E, fire insulation class I, smoke tightness class S of:

- FDA-BU-KW EI 120 (ve ho  $i \leftrightarrow o$ ) S (300 Pa)
- FDA-BU-KN EI 120 (ve ho  $i \leftrightarrow o$ ) S (300 Pa)

The damper is closed automatically as a result of temperature increase to of about 72°C by breaking the fusible release. The released partition closes immediately. The fire dampers can be fitted with one or two limit switches to indicate the closed position of one or two damper blades.

#### Available versions:

FDA-BU-KW - aaa - bbb - ccc

### Tests and certificates

- Fire resistance rating: EIS 120, EIS 60,
- Test method as per EN 1366-2:2015, classification method as per EN 13501-3+A1:2010P,
- Corrosion resistance as per EN 15650,
- EC declaration of conformity (EN 15650).

### Installation

The round fire dampers are designed for installation in general ventilation systems. When integrated into fire partitions, they provide equivalent protective performance and features as the partitions. The fire damper blade remains open under normal operating conditions – it is closed automatically in the event of a fire.

**The fire dampers can be installed in the following partitions:**

Type of partition	Minimum partition thickness [mm]
Concrete floor	150
Concrete wall	130
Solid brick wall	130
Cellular concrete block wall	130
Plasterboard wall on steel framing	130

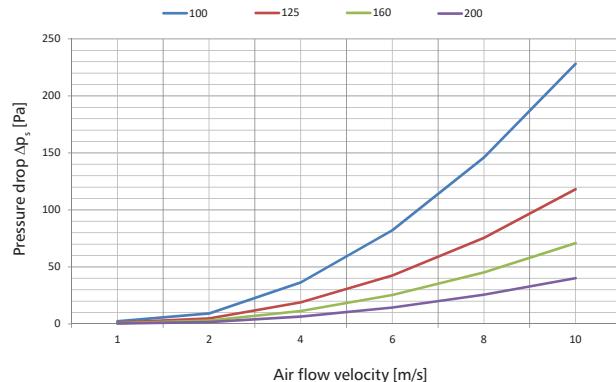

It is allowed to install the dampers in a partition in any position of the axis of rotation from 0° to 360°.

See the technical documentation shut-off fire damper FDA-BU for all information about wing-blade fire dampers and related installation options.

# Shut-off fire dampers

## FDA-12-T/FDA-12-M

### Description

The FDA-12 round fire dampers are designed for use in general ventilation systems to seal off smoke and fire between adjacent fire partitions.

The fire dampers are classified according to EN 13501-3+A1:2010P (Fire classification of construction products and building elements). The fire resistance was tested as per PN-EN 1366-2:2001P (Fire resistance tests for service installations - Part 2: Fire dampers). The entire manufacturing process meets the requirements of EN 15650:2010.

The FDA-12 fire dampers can be installed in horizontal and vertical fire partitions to provide fire resistance of EI 120 (ve ho i→o) S (which may depend on the actual fire resistance of the partition).

The fire dampers are available in the nominal diameter sizes DN100, DN125, DN160, DN200, DN250, and DN315. All fire dampers have a pull spring control gear and a fusible thermal trip (in FDA-12-T) or a return-spring actuator coupled with a thermal trip (in FDA-12-M). The spring-action versions can be provided with optional limit switches. The casing and optional accessories are made from galvanized steel sheet; the fire damper blade is made from silicate cement board.

Revision: 008/03/20/PG.

# Shut-off fire dampers

## FDA2-12-T / FDA2-12-M

### Description

The FDA2-12 round fire dampers are designed for use in general ventilation systems to seal off smoke and fire between adjacent fire partitions.

The fire dampers are classified according to EN13501-3+A1:2010P (Fire classification of construction products and building elements). The fire resistance was tested as per PN-EN 1366-2:2015 (Fire resistance tests for service installations — Part 2: Fire dampers). The entire manufacturing process meets the requirements of EN 15650:2010.

The FDA2-12 fire dampers can be installed in horizontal and vertical fire partitions to provide fire resistance of EI 120 (ve ho i→o) S (which may depend on the actual fire resistance of the partition).

The fire dampers are available in the nominal diameter sizes DN200, DN224, DN250, DN280, DN300, DN315, DN355, DN400, DN450, DN500, DN560, DN600, DN630. All fire dampers have a torsion spring trip (in FDA2-12-T) or a return-spring actuator coupled with a thermal trip (in FDA2-12-M). The spring-action versions can be provided with optional limit switches. The casing and optional accessories are made from galvanized steel sheet; the fire damper blade is made from silicate cement board.

## Shut-off fire dampers

# FDA2-12-T / FDA2-12-M

## Description

The FDA2-12 square fire dampers are designed for use in general ventilation systems to seal off smoke and fire between adjacent fire partitions.

The fire dampers are classified according to EN 13501-3+A1:2010P (Fire classification of construction products and building elements). The fire resistance was tested as per PN-EN 1366-2:2015 (Fire resistance tests for service installations — Part 2: Fire dampers). The entire manufacturing process meets the requirements of EN 15650:2010.

The FDA2-12 fire dampers can be installed in horizontal and vertical fire partitions to provide fire resistance of EI 120 (ve ho i↔o) S (which may depend on the actual fire resistance of the partition).

The fire dampers are available in the nominal sizes 160x160 – 1000x500 mm. All fire dampers have a torsion spring trip (in FDA2-12-T) or a return-spring actuator coupled with a thermal trip (in FDA2-12-M). The spring-action versions can be provided with optional limit switches. The casing and optional accessories are made from galvanized steel sheet; the fire damper blade is made from silicate cement board.

Version 002/04/19

### Product code examples

Product code: **FDA2 - aaa - bbb - ccc**

type	
control method	
size	
Optional accessories	

## Intended use and application

Square fire dampers are designed for installation in general ventilation systems. When integrated into fire partitions, they provide equivalent protective performance and features as the partitions. The fire damper blade remains open under normal operating conditions. It is closed shut automatically in the event of a fire.

The fire dampers can be installed in the following partitions:

Partition type	Minimum partition thickness (mm)
concrete separating floor	150
concrete wall	135
solid brick wall	135
cellular concrete unit wall	135
gypsum board wall on steel frame	135

Fire dampers can be installed with both horizontal and vertical axis of rotation.

**NOTE:** If the fire damper installation with a vertical axis of rotation and with an actuator at the bottom of the casing is required, notify the manufacturer about it before placing an order.

See all essential data in the respective Operating and Maintenance Manual.

### Product identification:

FDA2-12-aaa-bbb-ccc:

aaa – control:

T - torsion spring trip;

bbb – size:

160x160 – 1000x500 mm;

ccc – optional accessories:

no limit switches (standard version);

Z - limit switch (closed position feedback);

O - limit switch (open position feedback);

ZO - limit switch (open and closed position feedback);

aaa – control:

M - return-spring actuator coupled with a thermal trip;

bbb – size:

160x160 – 1000x500 mm

ccc – optional accessories:

B24 - actuator Belimo BFL/BFN/BF24-T ;

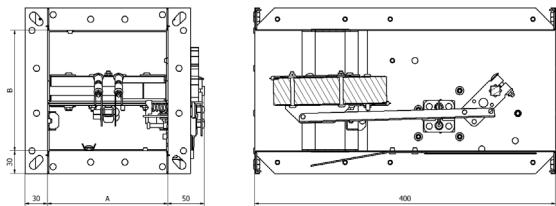

B230 - actuator Belimo BFL/BFN/BF230-T;

B24ST - actuator Belimo BFL/BFN/BF24-T-ST;
