# HEAT PUMP KEYMARK

Tested once,  
accepted everywhere

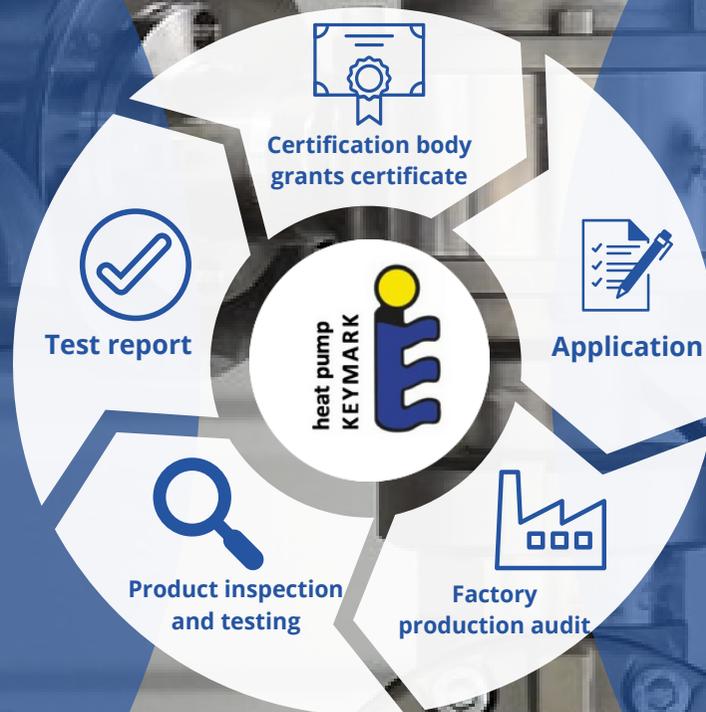

# ABOUT THE SCHEME

The Heat Pump KEYMARK is a voluntary, independent European certification mark for all heat pumps, combination heat pumps and hot water heaters. It is based on independent, third-party testing and demonstrates compliance with product requirements as set in the Heat Pump KEYMARK scheme rules and with efficiency requirements as set by Ecodesign Lot 1, Lot 2 and Lot 10. The Heat Pump KEYMARK scheme is owned by the European Committee for Standardisation (CEN). DIN CERTCO is appointed by CEN as the KEYMARK Management Organization (KMO).

## A single certificate for a single European market

The scheme is open to manufacturers and distributors who wish to obtain the KEYMARK certification. All they need to do is submit their application to the empowered certification body of their choice. The certification body will then provide the application documents and details related to the testing, inspection and assessment procedures as well as the certification costs. Testing can be performed in any of the registered testing laboratories.

For further information, all scheme documents are available under [www.heatpump.keymark.eu](http://www.heatpump.keymark.eu).

# SCHEME BENEFITS

## FOR MANUFACTURERS AND SERVICE PROVIDERS

- Lower costs for testing, inspection and certification
- Easier access to European market
- Increased consumer confidence
- Certified product quality
- Increased sales opportunities
- Improved company image
