eumardesign

perfection comes from **craftsmanship**

eumar starts where machination ends. craftsmen are able to create that which even the most sophisticated technology cannot: material authenticity that is experienced with all our senses.

passion for innovation.
respecting tradition
through reinvention.

respecting tradition and the past means
not simply preserving values, but also
constantly evolving to meet the demands
of the future. balancing the proven with
the new is our passion.

eumardesign

over the years we have
developed a culture of
excellence and **continuous
improvement in bathroom
innovation**

consistency is rooted in experience

for almost 30 years, eumar has been developing products for people. combining advanced engineering with contemporary aesthetics, we create bathrooms that offer long-term functionality and design. it is our mission to constantly reflect upon and update our concept of 'the bathroom' to meet ever-evolving requirements and desires.

eumardesign

“

with a passion for detail and a
love of authentic materials, we
create bathrooms to enrich
lives now and tomorrow

arkadi berman

products and services that create more value with less environmental impact

our company dna gives us a huge competitive advantage over other solid surface manufacturers and fabricators. unlike traditional fabrication methods which are expensive, wasteful and labor-intensive, eumar products are compression molded in a closed-molding process. this means that our products are created as single pieces without any joins. all that is required is drilling the necessary holes, and a sand and polish.

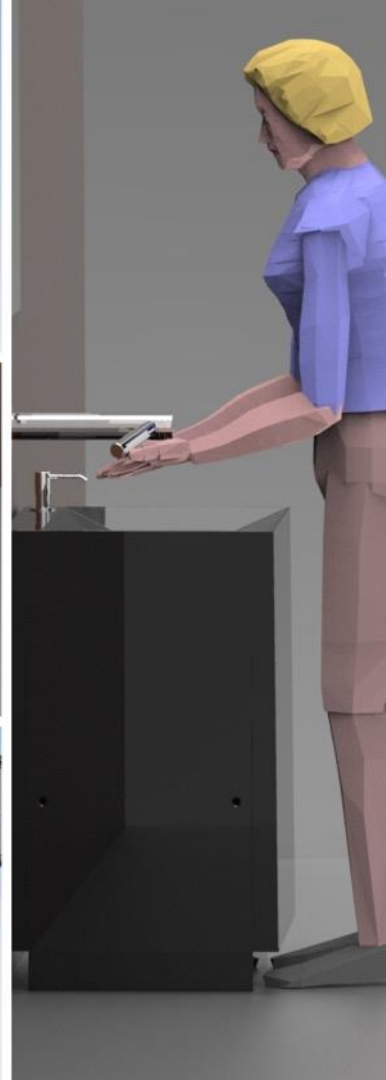

this results in a homogeneous, seamless and solid product. our manufacturing method has proven to be most efficient and least labor-intensive, making our products especially suitable for serial production.

flexibility reflects the brand's DNA

the dna of our brand is steeped in excellence. to this end, it is our mission to design and create outstanding composite stone products. no matter the scale of your project, you can be assured that our attention to detail will not waver. we approach each project with a unique perspective, as each project is considered an opportunity for us to deliver individualised solutions.

eumar's unique approach to manufacturing and client services gives us the flexibility to adapt quickly while maintaining reliable operations, respect for our clients and a love of our products.

in-house competency

innovation, design, comfort, functionality, hygiene, fire protection, recycling – at eumar, we are always ahead of current trends.

ecology and sustainability are key global issues, and at eumar we proudly embrace the responsibility of designing and manufacturing products that respect our environment.

close to 30 years of experience has led to our ability to consider practical design approaches to product design and bathroom layout that embrace functional ergonomics. our extensive experience also allows us to foresee any potential issues that might interfere with the complete enjoyment of our products for the next 15+ years.

creacore®
gelceramic®

our composite materials

our products are made from durable and recyclable composite stone, which is a technologically advanced material created by fusing natural minerals and modified polyester resin. eumar composite stone mimics the appearance of granite, marble, and other naturally occurring materials. one great benefit is that it is suitable for casting in a variety of shapes and sizes.

creacore®

seamless composite stone with a silky matte surface that feels warm to the touch and can be easily customized

gelceramic®

seamless composite stone with a durable gel coat layer and a smooth, glossy surface finish

100% antimicrobial®

eumar is at the forefront of antimicrobial technology in the field of composite stone products. the in-house designed and patented 100% antimicrobial® formula is a world-first. innovative antimicrobial components are fast becoming the preferred means of eliminating pathogenic microbes. 100% antimicrobial® kills 95% of bacteria within two hours of exposure and 99.9% within 24 hours.

100% antimicrobial® composite has been extensively tested, and has passed the independent standard test ISO 22196:2011

lightweight

the weight of each product depends on the density of the mineral filler. at eumar, the standard material product density is $1,96\text{g/cm}^3$. however, our innovative new lightweight® product makes use of special high quality raw materials, enabling up to a 50% reduction in the weight of a product. this new material is particularly popular for offshore and shipbuilding projects where weight is critical.

eumarcollection

eumarcollection

beauty, comfort and functionality

this is the mantra by which we have developed our signature collection. at eumar, we believe that the near-infinite combinations of our product range enables the design of dream spaces that are beautiful, comfortable and practical.

driven by the desire to create an alternative option for bathroom designers, eumar has crafted a collection of composite stone products that is bold, distinctive and individual. the signature collection includes modular elements that are characterized by an ongoing dialogue between functionality and design, which encourages the creation of refined yet modifiable atmospheres.

eumarcollection

reddot award 2019
winner

amelie

the amelie collection has everything you could possibly wish for from a vanity unit. designed to suit even the smallest bathrooms, the contemporary design and style of the amelie collection will make your bathroom truly stand out. visitors and guests will be amazed by the stylish simplicity this collection will bring to your home, hotel room, café or other establishment.

eumarcollection

carre

the carre collection is versatile and functional. clean, architectural lines and a hidden drain enable simple sophistication. this flexible system of rectangular washbasins offers a playful twist on a practical solution without sacrificing luxury.

eumarcollection

invictus

the invictus collection, inspired by strong geometric lines, suits every minimalist bathroom. the rectangular invictus I washbasin with its curved edges is at the cutting-edge of modernist design, and the generous bowl allows for ease of use.

eumarcollection

ocean

the ocean collection is the perfect choice for petite bathrooms seeking a quirky yet contemporary feel. an elegant drain cover installed in the ocean f washbasin enables the captivating and soothing effect of running water over a smooth, carved composite stone surface.

eumarcollection

origami

the sophistication of the origami washbasin is made apparent by its complex design and geometric lines, and is suitable for unique spaces designed with the highest of expectations.

eumarcollection

OVO

the ovo collection presents a trilogy of geometries – round, oval and rectangular. the thin rectangular geometries of the console system and parallel wall mounted shelves complement the round mirrors and oval shower, washbasins, shower, freestanding bathtubs.

eumarcollection

sibylla ms

the sibylla ms washbasin is the newest design by eumar. with its soft-cornered, rectangular bowl and removable basin waste cover, the immaculate and minimalist appearance of sibylla ms will suit the most stylish bathroom.

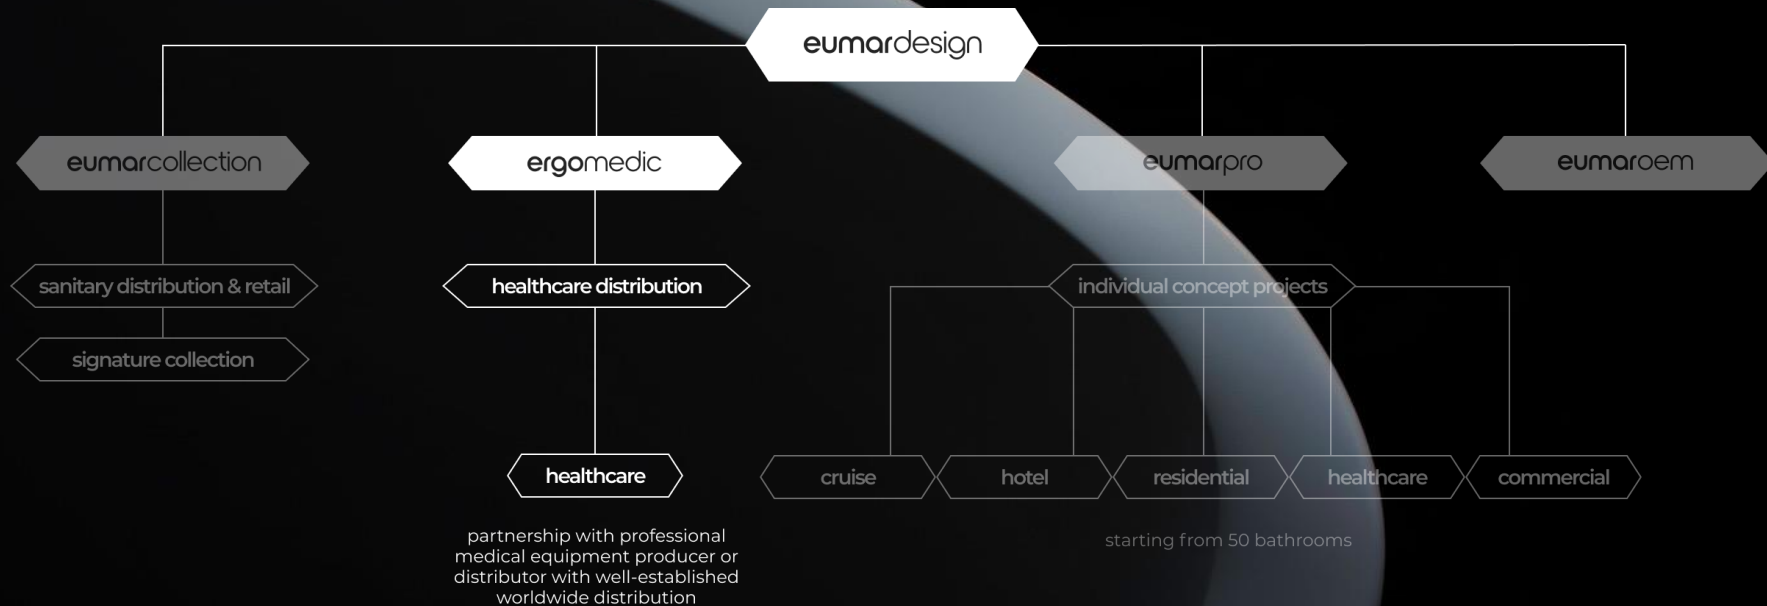

eumarcollection

split

the split collection of washbasins is distinguished by its clean design and excellent integration. suitable for any bathroom, the split collection expresses a unique design identity. integrated options ensure a stylish response to space saving requirements.

ergomedic

only 30%

of intensive care unit personnel follow suggested hand hygiene standards.

only 32%

of physicians follow suggested hand hygiene standards.

only 48%

of nurses follow suggested hand hygiene standards.

only 21%

wash their hands before patient contact.

only 47%

wash their hands after patient contact.

save lives – clean your hands

our hands are most contaminated parts of our body. they constantly come into contact with compromised public surfaces like door knobs, handrails and elevator buttons, and hand-shaking is standard practice in most social situations. according to the World Health Organisation (WHO), the spread of bacteria costs billions to the healthcare industry and causes tens of thousands of deaths every year. a significant number of hospital acquired infections (HAIs) are caused by lack of hand hygiene as demonstrated by the statistics above.

corporate responsibility and sustainability.

we are the first composite stone sanitaryware manufacturer to bring antimicrobial surfaces to the world. with the contribution of our 100% antimicrobial® technology, we hope to help reduce the number of preventable deaths.

what if there was a way to
make hand hygiene so simple,
it could actually decrease
infection rates?

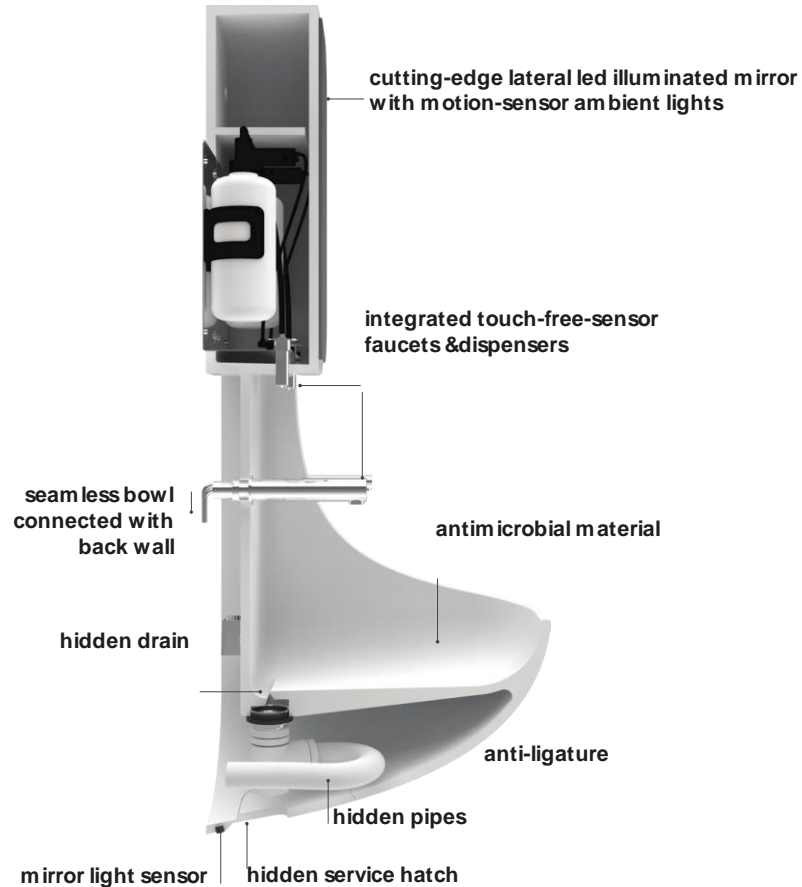

ergomedic

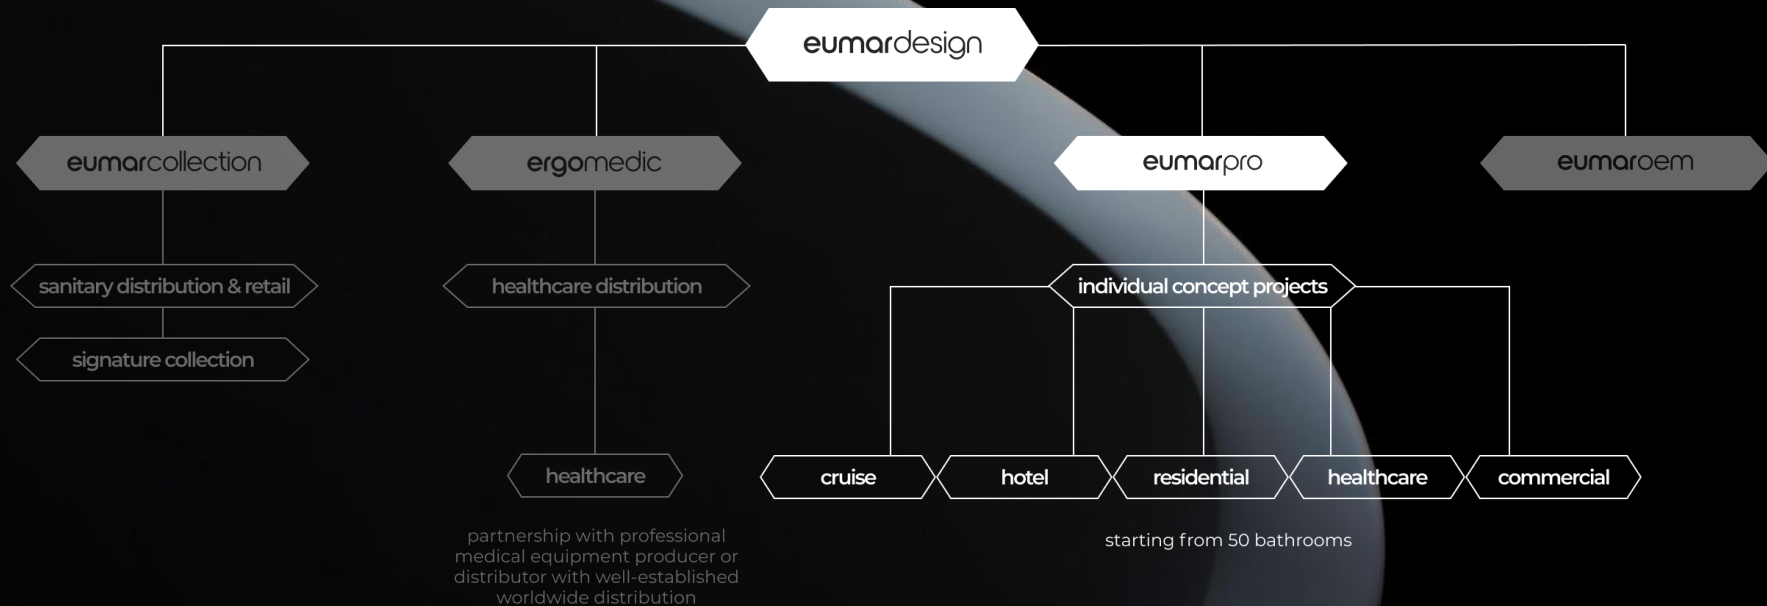

convenient and clean

the innovative ergomedic washbasin designs focus on ergonomics, hygiene, long-lasting antimicrobial qualities and patient safety.

antimicrobial properties
and patient safety

eumarpro

individual concepts

customized product development is at the very core of eumar. we work closely with architects and designers to develop products that are tailored to their specific needs. working across the globe, our company has successfully completed numerous installations across a range of design briefs with different project requirements. at eumar, we welcome all of your ideas for custom-made design products. individual concepts are both more affordable and easier than you think.

one-stop supplier

eumar offers a complete range of key services from design conceptualization, pattern and tool making, through to mockup presentation, serial production, delivery and installation and aftersales support.

unique product projects available for 50 or more bathrooms

we offer unique products and services that our competitors can not.

the exclusive technology at eumar enables low tooling and molding costs. this allows us to invent new designs and customize sizes for our clients in a short span of time, which makes unique projects affordable to a wide range of clients.

any projects starting from 50 pcs per lot a welcomed!

eumarpro

transforming ideas
into reality

eumarpro

custom-designed products

we work closely with our clients to translate designs through robust product development into high quality finished and cost efficient solutions.

our talented art development team supports our clients from the initial concept stage through to the design development stage. utilizing solidwork, we can work with 2d drawings or 3d cad files. once a design is finalized, we produce prototypes, molds and toolings for serial production.

small things make a big difference

we strongly believe that it is the small things that make a big difference. during the design and development phase of new products, our experts work with our clients to create the best product to meet their needs. some of the technical modifications we propose will:

- increase product functionality
- improve client experience
- incorporate contemporary design flair
- lower cleaning and maintenance cost

our innovation

our innovation pipeline is full of new ideas. we are constantly experimenting with different forms and elements and developing these into products fit for function. one of the great advantages at eumar is the exceptional technology that enables a turnaround time for new and unique product concepts of 2-3 days. within this short period of time, we can prepare a complete presentation of a new design for our project clients' visual pleasure.

project success

we always work on two design concepts in parallel for our clients. we see this as standard practice, as our first priority is project success and client satisfaction.

in most cases, eumar concepts exceed client expectations. we admit, our favorite projects are those that challenge us; to learn, improve, problem-solve and revolutionize.

we see our relationship with a client as synergistic. eumar is always fully committed to working towards the goal the client brings to us. our goal is to deliver bathrooms that positively impact the success of our clients' projects. for this reason, we believe our clients do better business with us.

we love building a relationship with our clients, and believe that integrity throughout project development creates loyalty that lasts a lifetime.
