

FANS FOR **INDUSTRIAL** APPLICATIONS

**TOP-PERFORMING. POWERFUL. DURABLE.
ENERGY-SAVING. SAFE.**

The MAICO range for industrial applications:

- ▶ High-performance axial duct fans up to 142,000 m³/h
- ▶ Very powerful centrifugal fans
- ▶ Fans for conveying acidic and corrosive media
- ▶ Fans for high airstream temperatures up to 200 °C
- ▶ Fans with energy-saving EC motors
- ▶ Ex fans for gas, hydrogen and dust applications
- ▶ Explosion protection in accordance with ATEX and IECEx

WITH OVER 1,000 PRODUCTS, MAICO IS NOW THE **FULL-RANGE SUPPLIER FOR INDUSTRIAL VENTILATION!**

In order to ensure good air quality in assembly halls, warehouses or production facilities, particularly powerful ventilation systems are required that can convey large volumes from special application areas. Whether centrifugal blowers or wall, roof, duct or channel fans – at **MAICO** you will find suitable fans for ventilation and air extraction for a wide range of requirements and in many dimensions:

- ▶ High-performance duct fans up to 142,000 m³/h
- ▶ Fans for commercial applications: Recirculation fans, window fans, gastronomy ventilation
- ▶ Fans for special applications: Fans for high airstream temperatures, Ex fans, corrosion-resistant fans
- ▶ System accessories: Mounting material, sound absorbers, air inlets and outlets, filters, air heaters, various switches and much more.
- ▶ Sensors: Differential pressure, vibration, temperature and humidity sensors

OUR SERVICE FOR YOU:

- ▶ Many years of experience in the planning of industrial and commercial properties
- ▶ Technical data such as 3D or BIM data
- ▶ Tender texts

FANS FOR COMMERCIAL PREMISES AND WORKPLACES

4

- Nominal size 200-310 mm
- Air volume up to approx. 4,500 m³/h

AXIAL HIGH-PERFORMANCE WALL FANS

7

- Nominal size 200-1,250 mm
- Air volume of 72,000 m³/h
- Ex wall fans

AXIAL HIGH-PERFORMANCE DUCT FANS

18

- Nominal size 200-1,600 mm
- Air volume up to approx. 143,000 m³/h
- Ex duct fans

CENTRIFUGAL / SEMI-CENTRIFUGAL / BOX / DIAGONAL DUCT FANS

28

- Nominal size 100-710 mm
- Air volume up to approx. 23,000 m³/h
- EC motor
- Compact ventilation boxes with EC motor
- Ex duct fans

CENTRIFUGAL BLOWER

37

- Size 100-630 mm
- Metal, plastic, stainless steel
- Air volume up to approx. 18,000 m³/h
- Particularly powerful
- Ex centrifugal blower
- Blower for high airstream temperatures up to 150 °C

CHANNEL FANS

44

- Channel dimensions 500 x 250 mm to 1,000 x 500 mm
- Air volume up to approx. 12,000 m³/h
- Energy-saving EC motors
- Sound-insulated versions

ROOF FANS

48

- Nominal size 100-900 mm
- Air volume up to approx. 45,000 m³/h
- Energy-saving EC motors
- Ex roof fans

FANS FOR COMMERCIAL PREMISES AND WORKPLACES

DISCOVER OUR WALL AND WINDOW FANS AS WELL
AS FANS FOR AIR CIRCULATION.
FOR A PLEASANT CLIMATE IN YOUR BUSINESS PREMISES!

EV/EVR axial window fans

Axial window fan for ventilation and air extraction

- ➔ **Nominal size 315 mm**
- ➔ **Air volume up to 1,400 m³/h**

EV / EVR axial flush-mounted wall fans

Article	Article no.	V (m ³ /h)	P (watt)
EV 31	0080.0820	1,400	110
EVR 31	0080.0821	1,400	110

V (m³/h): air volume · P (watt): Nominal power

ECO axial wall fan

Oscillating axial industrial fan for wall mounting

- ➔ **Nominal size 300-400 mm**
- ➔ **Air volume up to 4,500 m³/h**

ECO axial wall fan

Article	Article no.	max. air circulation m ³ /h	P (watt)
ECO 30 E	0088.0010	2800	37
ECO 40 D	0088.0014	4500	44

DN: nominal size · P (watt): nominal power

PRODUCT FEATURES

- Suitable for windows and thin walls
- Quick installation using the enclosed screws
- Window fan for air extraction or ventilation and air extraction
- Available in nominal size 315 mm
- With internal shutter

APPLICATION EXAMPLES

- Offices
- Business premises
- Commercial spaces
- Restaurants
- Production facilities

PRODUCT FEATURES

- Suitable for wall mounting
- Adjustable pivoting angle
- Fan and part-turn gearbox drive can be switched separately

APPLICATION EXAMPLES

- Offices
- Commercial spaces
- Production facilities
- Restaurants
- Workplaces
- Showrooms

EN / ENR axial flush-mounted wall fans

Axial flush-mounted wall fan for ventilation and air extraction

- ➔ Nominal size 200-315 mm
- ➔ Air volume up to 1,500 m³/h

EN / ENR axial flush-mounted wall fans

Article	Article no.	V (m ³ /h)	P (watt)
EN 20	0081.0307	420	30
ENR 20	0081.0316	460	42
EN 25	0081.0308	630	39
ENR 25	0081.0317	840	48
EN 31	0081.0309	1,500	76
ENR 31	0081.0318	1,500	76

V (m³/h): air volume · P (watt): Nominal power

EVN axial window fans

Axial window fan for air extraction

- ➔ Nominal size 150-225 mm
- ➔ Air volume up to 640 m³/h

EVN axial flush-mounted wall fans

Article	Article no.	V (m ³ /h)	P (watt)
EVN 15	0080.0853	240	25
EVN 22	0080.0855	490	37
EVN 22 R	0080.0857	640	49

V (m³/h): air volume · P (watt): Nominal power

PRODUCT FEATURES

- Elegant, appealing design
- Fast, problem-free replacement with predecessor models
- Easy cleaning with minimum time expenditure, as the housing can be removed without tools
- Wall fan for air extraction (EN series) or air extraction and ventilation (ENR series)

APPLICATION EXAMPLES

- Offices
- Business premises
- Commercial spaces
- Restaurants
- Production facilities
- Workplaces
- Medical practices
- Showrooms

PRODUCT FEATURES

- Pleasantly quiet
- Quick assembly thanks to click and screw technology
- Shutter protects against soiling
- Very easy to clean as the housing can be removed without tools
- Flexible installation, suitable for windows and thin walls

APPLICATION EXAMPLES

- Restaurants
- Showrooms
- Construction containers
- Lecture halls
- Kindergartens
- Hospitals
- Foreman's offices

AXIAL HIGH-PERFORMANCE WALL FANS

**WE PRODUCE ROBUST AND POWERFUL WALL FANS FOR INDUSTRIAL
AND PRODUCTION FACILITIES FOR EFFECTIVE VENTILATION AND AIR
EXTRACTION.**

Application example

Air extraction from server/compressor/transformer rooms

The EZQ/EZS and DZQ/DZS wall fans are ideal for air extraction and thus removing high heat loads from closed rooms. A thermostat (e.g. TH 16) permanently measures the room temperature. If the setpoint temperature is exceeded, the exhaust air fan (e.g. EZQ/EZS or DZQ/DZS) is switched on and the shutter (e.g. MK type) is opened.

The fan extracts the warm exhaust air near the ceiling. Cooler supply air flows in through the fresh air/external grille near the floor. A supply air filter (e.g. ZFF) filters the dust and dirt particles out of the supply air to protect the sensitive electrical or electronic systems in the room from damage.

- ❶ External grille, type MLZ/MLA
- ❷ Internal grille, type IG (not shown)
- ❸ Fan, type EZQ, type DZQ
- ❹ External grille/shutter, type AS, type MLZ or type MLA (not shown)

➔ Exhaust air

➔ Fresh air supply

VENTILATION SYSTEM FOR HEAT DISSIPATION IN TRANSFORMER STATIONS

Single-phase transformer

Maximum electrical power: $5000 \text{ VA} = P_{\text{electr.}}$

$\cos \varphi = 0.8$

Electrical power loss: $545 \text{ W} = Q_v$

What exhaust air volumetric flow is required for heat dissipation at a temperature difference of 5K (Kelvin)?

$$V = \frac{Q_v}{C_{\text{air}} \cdot \Delta T} \quad V = \frac{545 \text{ W}}{0.35 \text{ Wh (m}^3 \cdot \text{K)} \cdot 5 \text{ K}} \quad \mathbf{V = 312 \text{ m}^3/\text{h}}$$

Suitable duct fan:

ERR 16/1 S

Suitable wall fan:

EZQ 20/4 E

Application example

Diluent ventilation in the storage room

EZQ Ex/ DZQ Ex

With diluent ventilation, the air-gas mixture or air-dust mixture is extracted directly using wall fans – fresh air is supplied passively via the external grille. The storage room remains free of explosion hazards.

The air exchange reduces the concentration of flammable substances to such an extent that it falls below the lower explosion limit and a mixture of gases, vapours, mists or dusts cannot ignite, even if an ignition source is present.

- ❶ MLZ external grille (not shown)
- ❷ Internal grille, type MLZ
- ❸ Fan, type EZQ Ex or type DZQ Ex
- ❹ External grille, type AS Ex (not shown)
- ➡ Exhaust air
- ➡ Outside air

Application example

Ventilation solution for a gas atmosphere in a battery room

When the battery cells are charged, hydrogen is produced and collects under the ceiling. With lead batteries, sulphuric acid mist forms close to the ground at the same time. Both need extracting. Cross-ventilation can be realised using supply and exhaust air fans, which effectively prevents the occurrence of an explosive atmosphere.

MAICO's ventilation and air extraction system with Ex fans at the floor and ceiling levels guarantees ensure that the risk of explosion is safely averted.

- ❶ External grille, type MLZ (not shown)
- ❷ EZQ E Ex e or DZQ Ex e supply air fan (fan with air flow direction B)
- ❸ EZQ E Ex e or DZQ Ex e exhaust air fan
- ❹ Shutter, type AS Ex (not shown)
- ➡ Exhaust air
- ➡ Outside air

EZF, DZF flush-mounted wall fans with wall sleeve

Axial wall fan for flush-mounted installation

- Nominal size 200-500 mm
- Air volume up to 6,045 m³/h

EZF flush-mounted wall fans with wall sleeve

DZF 50/6 B	0085.0111	5,480	220

V (m³/h): air volume · P (watt): Nominal power

PRODUCT FEATURES

- Can be used flexibly, as it can be switched to ventilation and air extraction
Exception: EZF 20/4 E and EZF 25/4 E
- For commercial use: durable, powerful and robust
- Can be fitted in any position
- Wall sleeve made of galvanised sheet steel
- Complete flush-mounted installation with wall sleeve
- High degree of protection IP 55 (54)
- Special versions on request

APPLICATION EXAMPLES

- Changing rooms
- Foreman's offices
- Restaurants
- Garages
- Fitness rooms
- Workplaces
- Showrooms
- Business premises

V (m³/h): air volume · P (watt): Nominal power

PRODUCT FEATURES

- Explosion protection and approvals in accordance with ATEX and IECEx
- Qualified for all gases and vapours of Ex group IIA and IIB and also for hydrogen
- Simple speed control with transformer Exception: EZQ 20/4-E Ex e
- For safe use in potentially explosive atmospheres
- Can be used flexibly, as it can be switched to ventilation or air extraction Exception: EZQ 20/4-E Ex e
- Safe operation thanks to high degree of protection
- Easy installation with help of a wall plate or a wall ring

APPLICATION EXAMPLES

- Environment with explosion hazard (zone 1 and 2)
- Dye works
- Battery rooms
- Labs
- Commercial spaces
- Production facilities

¹⁾ in opt. efficiency · V (m³/h): air volume · P (watt): Nominal power

PRODUCT FEATURES

- For commercial use: durable, powerful and robust
- Easy transport and installation thanks to sturdy transport lug
- Simple installation using a wall ring
- For air extraction
- Variable speed with MFU frequency converters
- High degree of protection IP 55

APPLICATION EXAMPLES

- Production facilities
- Commercial spaces
- Store rooms
- Process exhaust air
- Industrial halls

AXIAL HIGH-PERFORMANCE DUCT FANS

**WE MANUFACTURE ROBUST AND POWERFUL DUCT FANS FOR
YOUR PRODUCTION FACILITIES.
FOR EFFECTIVE VENTILATION AND AIR EXTRACTION!**

Application example

Exhaust air in a machine hall via a duct fan

In industrial production facilities, the ambient air is often affected by heat, dust, dirt, etc. This polluted air must be removed in a controlled manner for various reasons:

- Occupational health and safety for employees
- Clean process air for production
- Avoidance of production impairment due to dirt

In this example, the warm, polluted air rises in the hall. This is drawn in with an axial duct fan via air grilles and transported out of the building via a ducting run. Fresh air can flow into the lower area of the hall.

❶ Intake grille, type LGR

❷ DZR duct fan

↗ Exhaust air

EZR duct fan

V (m³/h): Air volume · watt: Nominal power

PRODUCT FEATURES

- Explosion protection and approvals in accordance with ATEX
- Qualified for all gases and vapours of Ex group IIA and IIB and also for hydrogen
- Powerful fan for large air volumes
- For easy and direct installation in a duct system
- Can be fitted in any position

APPLICATION EXAMPLES

- Environment with risk of explosion (zone 1 and 2)
- Production facilities
- Hazardous materials storage
- Process exhaust air
- Industrial halls

System graphics

EZR / DZR / Ex

In addition to axial duct fans such as the EZR/DZR, MAICO also offers the DZR Ex variant for environments with a risk of explosion. As a system provider, we also offer a wide range of accessories such as protective grilles, suction nozzles, couplings and counter sockets as well as vibration dampers and mounting feet. Below you can see an example structure. Folded spiral-seams ducts, which must be available on site, are shown transparently.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

- ❶ SG protective grille
- ❷ AD suction nozzle
- ❸ GS counter socket
- ❹ ELA/ELA Ex flexible coupling
- ❺ EZR / DZR / DZR Ex axial duct fans
- ❻ FU mounting foot
- ❼ GP vibration damper

System graphics

DAR / Ex

The DAR axial duct fan is also available in an explosion-proof DAR Ex version. In addition to basic accessories such as the mounting foot, protective grille and suction nozzle, MAICO also offers modular accessories such as the matching tubular sound absorber for reduced sound power and a more pleasant working environment. Below you can see an example structure.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

CENTRIFUGAL / SEMI-CENTRIFUGAL / BOX / DIAGONAL DUCT FANS

**OUR PORTFOLIO INCLUDES CENTRIFUGAL, SEMI-CENTRIFUGAL,
DIAGONAL AND SOUND-INSULATED FANS
FOR INSTALLATION IN YOUR DUCT SYSTEMS AND VENTILATION BOXES.**

Application example

Exhaust air system for industrial facilities

In industrial production facilities, the ambient air is often affected by heat, dust, dirt, etc. This polluted air must be removed in a controlled manner for various reasons:

- Occupational health and safety for employees
- Clean process air for production
- Avoidance of production impairment due to dirt

In the example shown, the warm compressor exhaust air is drawn directly into the duct system via connection sockets on the respective compressors. A powerful EDR diagonal fan conveys the exhaust air outside.

HEAT EXTRACTION FROM COMPRESSORS

Electrical compressor connected load:	110 kW
Room volume of the installation room:	300 m ³
Power loss of the compressors in heat: 10% of the electrical output	
Number of compressors:	4 items

① Folded spiral-seams duct

② EDR fan

➔ Exhaust air

What exhaust air volumetric flow is required for heat dissipation?

Heat emission to the installation room:

1 compressor $\triangleq Q_K = 0.1 \cdot 110 \text{ kW} \rightarrow Q_K = 11 \text{ kW}$

4 compressors $\triangleq 4 Q_K = 44 \text{ kW}$

Required volumetric air flow at a temperature difference of 8K?

$$V = \frac{4 \cdot Q_K}{C_{\text{air}} \cdot \Delta T} \quad V = \frac{4 \cdot 11 \text{ kW}}{0.35 \text{ Wh (m}^3 \cdot \text{K)} \cdot 8 \text{ K}} \quad V = \frac{4 \cdot 11000 \text{ W}}{0.35 \text{ Wh (m}^3 \cdot \text{K)} \cdot 8 \text{ K}}$$

V = 15714 m³/h

Suitable duct fan: EDR 71

Application example**Supply and exhaust air with the ECR/ESR ventilation boxes**

Wherever there is little space available for the ventilation system, the ECR compact boxes are ideal. Thanks to their low mounting height, they fit easily into suspended ceilings. This makes it easy to install the supply air and exhaust ducts. Special highlight: The air filter, fan and air heater are already integrated in the supply air unit. This saves you space, installation and the purchase of additional components.

In the example shown, a sound-insulated ECR compact box with heat register supplies a shop with supply air. The air inlets and outlets are distributed across the entire ceiling surface in such a way that the room is optimally cross-ventilated. The ESR ventilation box then conveys the exhaust air outside via the exhaust air system. Both ventilation boxes are controlled via a common control. This means that the two units are always perfectly harmonised.

- ❶ External grille type MLZ or type MLA (not shown)
- ❷ Compactbox ECR
- ❸ Supply air grille type LGR
- ❹ Exhaust air grille type LGR (not shown)
- ❺ ESR sound-insulated ventilation box
- ❻ External grille outgoing air type MLZ, type MLA or shutter type AS (not shown)

- ➡ Outside air
- ➡ Heated supply air
- ➡ Exhaust air
- ➡ Outgoing air

Application example

Ventilation solution in the production of textiles with explosive dust atmosphere

Explosion-proof duct fans are used to extract the textile fibres released during the production process directly and efficiently.

The production area remains free of a flammable mixture of air and dust. The system operators breathe clean air, free from textile fibres, while working on the machine.

- ❶ Internal grille, type MLZ, earthed
- ❷ ERM Ex t duct fan
- ➡ Exhaust air
- ➡ Fresh air supply

ERR, ERR-2 EC centrifugal duct fans

- ➔ Nominal size 100-315 mm
- ➔ Air volume up to 1,370 m³/h

DN: nominal size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Ideal for redevelopments and retrofitting
- Space saving due to external installation
- Fast, cost-effective installation
- Optimum efficiency, low maintenance costs
- Pleasantly quiet
- Housing can be easily removed for cleaning

APPLICATION EXAMPLES

- Machine extraction
- Workplaces
- Commercial spaces
- Fitness rooms

ESR-3 EC sound-insulated ventilation box

Sound-insulated ventilation box with swivelling fan

- ➔ Nominal size 125-315 mm
- ➔ Air volume up to 1,800 m³/h

ESR-3 EC sound-insulated ventilation box

Article	Article no.	DN	V (m³/h)	P (watt)

ESR 31-3 EC	0080.1004	315	1,800	274

DN: nominal size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Low energy consumption thanks to EC technology
- Low power consumption, especially in the control range
- Quick, cost-effective installation thanks to standard fixing brackets
- Screwed on housing cover with rain cover
- Suitable for outdoor installation
- Inlet and outlet side connection socket for direct installation in ventilation ducts
- With 40 mm of sound-absorbing glass-fibre laminated mineral wool to meet the increased requirements for especially low noise levels
- Centrifugal impeller with backward curved blades

APPLICATION EXAMPLES

- Commercial spaces
- Showrooms
- Offices
- Foreman's offices
- Changing rooms

DN: nominal size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Compact supply air unit with filter, electric air heater and control
- Stepless fan control: constant volumetric flow/ constant pressure/ constant speed/ temperature/ CO₂ controlled.
- With insulation for the lowest noise level and best thermal insulation

APPLICATION EXAMPLES

- Workplaces
- Medical practices
- Common rooms
- Fitness rooms
- Restaurants

PRODUCT FEATURES

- Especially for harsh operating conditions and kitchen exhaust air
- Supply of medium to large air volumes at high resistances
- Suitable for high airstream temperatures up to 120° C
- Motor outside of the air flow

APPLICATION EXAMPLES

- Range hoods
- Commercial kitchens
- Workplace extraction
- Machine extraction

PRODUCT FEATURES

- Extremely high efficiency
- Minimum energy costs
- Very quiet thanks to optimised aerodynamics
- Integrated mounting bracket for easy installation

APPLICATION EXAMPLES

- Machine extraction
- Workplace extraction
- Manufacturing facilities
- Store rooms
- Workshops

ERM Ex e – Ex semi-centrifugal duct fans made of plastic (medium: gas)

PRODUCT FEATURES

- Explosion protection and approvals in accordance with ATEX and IECEx
- Qualified for all gases and vapours of Ex group IIA and IIB and also for hydrogen
- Housing made of high quality, conductive plastic, antistatic
- Compact design for installation in small spaces
- Can be fitted in any position

APPLICATION EXAMPLES

- Environment with risk of explosion (zone 1 and 2)
- Dye works
- Battery rooms
- Commercial spaces
- Production facilities

ERM Ex t – Ex semi-centrifugal duct fans

Semi-centrifugal duct fan made of plastic (medium: dust)

- ➔ Nominal size 180-250 mm
- ➔ Air volume up to 1,010 m³/h

ERM Ex t – DUST Ex semi-centrifugal duct fans

Article	Article no.	DN	V (m³/h)	P (watt)
ERM 18 Ex t	0080.0466	180	310	50
ERM 18 Ex t/60 Hz	0080.0376	180	340	88
ERM 22 Ex t	0080.0467	200	560	200
ERM 22 Ex t/60 Hz	0080.0377	200	675	310
ERM 25 Ex t	0080.0468	250	870	300
ERM 25 Ex t/60 Hz	0080.0378	250	1,010	495

DN: nominal size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Explosion protection and approvals in accordance with ATEX and IECEx
- Qualified for all dusts of the Ex-group IIIA and IIIB
- Housing made of high quality, conductive plastic, antistatic
- Compact design for installation in small spaces
- Can be fitted in any position

APPLICATION EXAMPLES

- Environment with risk of explosion (zone 21 and 22)
- Pellet storage
- Food industry
- Machine extraction

System graphics

Centrifugal / semi-centrifugal / box / diagonal duct fans

In our portfolio you will find numerous centrifugal, semi-centrifugal, diagonal and sound-insulated box fans for installation in your duct systems. To fully equip you, we also stock associated accessories such as air flow monitors, electric and water air heaters as well as air filters and disc valves. Below you can see an example structure. Folded spiral-seams ducts, which must be available on site, are shown transparently.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

- ❶ TK disk valve
- ❷ LW 9 air flow monitor
- ❸ ERH electric air heater
- ❹ WRH water/air heater
- ❺ RSR -1 tubular sound absorber
- ❻ ERM Ex semi-centrifugal duct fans
- ❼ ESR-3 EC sound-insulated ventilation box

- ❽ EFR centrifugal flat box
- ❾ ECR-2 EC compact boxes
- ❿ EDR diagonal fan
- ⓫ ERR-2 EC centrifugal duct fans
- ⓬ TFE air filter
- ⓭ SG external grille

CENTRIFUGAL BLOWER

OUR RANGE INCLUDES CENTRIFUGAL BLOWERS MADE OF METAL, STAINLESS STEEL AND PLASTIC WITH ROUND AND RECTANGULAR EXHAUST OPENINGS.

Application example

Avoidance of polluted indoor air

In industrial production facilities, the ambient air is often affected by heat, dust, dirt, etc. This polluted air must be removed in a controlled manner for various reasons:

- Occupational health and safety for employees
- Clean process air for production
- Avoidance of production impairment due to dirt

In this example, this contaminated air is conveyed directly from the injection moulding system via a folded spiral-seams duct. This keeps the room air clean and uncontaminated. The GRK centrifugal blower is a high-pressure fan that draws the exhaust air directly out of the machine and blows it into the exhaust duct. As the motor is located outside the air flow and the housing is made of plastic, the centrifugal blower is also particularly suitable for conveying corrosive and acidic media.

HEAT EXTRACTION FROM INJECTION MOULDING MACHINES

Specification of the manufacturer of the injection moulding machine:

35% power loss of the electrical output

Electrical output of the injection moulding machine: 47 kW

Required volumetric air flow at a temperature difference of 10K?

$$Q_{\text{IMM}} = 0.35 \cdot P_{\text{el,IMM}}$$

$$Q_{\text{IMM}} = 0.35 \cdot 47 \text{ kW}$$

$$Q_{\text{IMM}} = 16.45 \text{ kW (heat load)}$$

Required volumetric air flow at a temperature difference of 8K?

$$V = \frac{Q_{\text{IMM}}}{C_{\text{air}} \cdot \Delta T} \quad V = \frac{16.45 \text{ kW}}{0.35 \text{ Wh (m}^3 \cdot \text{K)} \cdot 10 \text{ K}} \quad V = \frac{16450 \text{ W}}{0.35 \text{ Wh (m}^3 \cdot \text{K)} \cdot 10 \text{ K}}$$

① Folded spiral-seams duct

② GRK centrifugal blower

➔ Exhaust air

$$V = 4700 \text{ m}^3/\text{h}$$

Suitable channel fan:

DPK 35 EC

Suitable centrifugal blower:

GRK 35/4 D

GRK centrifugal blower, plastic

Plastic centrifugal blower with rectangular exhaust opening

- ➔ Size 120-350 mm
- ➔ Air volume up to 7,000 m³/h

GRK centrifugal blower, plastic

Article	Article no.	Size	V (m³/h)	P (watt)

GRM HT 18/2	0073.0283	180	2,490	1,100

Size: impeller size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Centrifugal blower with metal housing for high temperatures
- Suitable for airstream temperatures up to + 150 °C
- Powerful fan for industrial applications
- Motor outside of the air flow

APPLICATION EXAMPLES

- Machine extraction
- Hardening shop
- Foundry
- Plastic injection moulding

GRK R Ex – Ex centrifugal blower, plastic

Size: impeller size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Centrifugal blower made of plastic for applications in areas subject to explosion hazards
- Explosion protection and approvals in accordance with ATEX
- Qualified for all gases and vapours of Ex group IIA and IIB and also for hydrogen
- Suitable for conveying corrosive and acidic air
- Motor outside of the air flow
- Powerful fan for industrial applications

APPLICATION EXAMPLES

- Environment with explosion hazard (Zone 2)
- Workplace extraction
- Fume cupboard
- Digestorium
- Sewage treatment plant

GRM ES Ex

Ex centrifugal blower, metal

Centrifugal blower with stainless steel housing

- ➔ Size 100-180 mm
- ➔ Air volume up to 2,790 m³/h

GRM ES Ex – GAS Ex centrifugal blower

Article	Article no.	Size	V (m³/h)	P (watt)

GRM / GRK / Ex

The GRM centrifugal blower is also available in the GRM HT variant for high temperatures and the GRM Ex variant for use in potentially explosive atmospheres. We can also supply you with all the necessary accessories such as intake and exhaust protection grilles, intake sockets, motor bases and transition adapters. Below you can see an example structure.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

- ❶ SGEI inlet protective grille
- ❷ ASI intake socket
- ❸ GRM HT / GRM Ex centrifugal blower
- ❹ MSI motor base
- ❺ URRI transition adapter

CHANNEL FANS

**FIND OUT MORE ABOUT OUR CENTRIFUGAL CHANNEL FANS
WITH AND WITHOUT SOUND INSULATION FOR INSTALLATION
IN YOUR CHANNEL SYSTEMS.**

Application example

Channel fans for industrial facilities

MAICO channel fans are particularly suitable for all types of industrial applications:

- Warehouses
- Machine extraction systems
- Assembly and production halls
- Workshops

Channel fans are particularly useful for large room volumes and correspondingly large air volumes, such as those found in halls. As the system components (fan, air heater, heat exchanger, air filter, etc.) can be combined as required, the right ventilation solution can be put together for every conceivable requirement. In this example, the exhaust air is drawn in via intake grilles and the outgoing air is conveyed outside via an exhaust air grille using a channel fan. In parallel, another channel fan draws in outside air via an external grille. This flows into the warehouse via supply air grilles and provides fresh air.

- ❶ Intake grille, type MLZ or type MLA (not shown)
- ❷ Fan, type DSK EC
- ❸ Air grille, type LGA or type LGZ
- ❹ Exhaust air grille, type LGA or type LGZ (not shown)
- ❺ Fan, type DSK EC
- ❻ External grille, type MLZ or type MLA
- ➡ Supply air
- ➡ Outside air
- ➡ Exhaust air
- ➡ Outgoing air

WAREHOUSE WITH CENTRALISED AIR VENTILATION AND EXTRACTION WITHOUT HEAT RECOVERY

Ventilation and air extraction are provided via the hall ceiling. Supply and exhaust air is discharged via the gable. Distribution takes place via grilles in the channel system.

Area of the warehouse (A):	150m ²
Height of the warehouse (h):	8 m
Desired air exchange (AE):	2.5 1/h
Calculated volumetric flow:	3,000 m ³ /h
Calculated system pressure loss:	approx. 550 Pa

The DSK 50 EC fan can be operated with an ST EC 230 potentiometer with 6V.

$$V = A \cdot h \cdot AE$$

$$V = 150 \text{ m}^2 \cdot 8 \text{ m} \cdot 2.5 \text{ 1/h} = 3000 \text{ m}^3/\text{h}$$

DPK EC channel fans

Centrifugal channel fan with EC motor

- Channel dimensions 500 x 250 mm to 1,000 x 500 mm
- Air volume up to 11,990 m³/h

DPK EC channel fans

Article	Article no.	Channel dimension (mm)	Size	V (m ³ /h)	P (watt)
DPK 22 EC	0086.0800	500 x 250	220	2,000	198

Size: impeller size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Installation in square ventilation channels
- Low energy consumption thanks to EC motors
- Reduced space requirement due to compact dimensions
- Motor impeller can be swivelled out for cleaning purposes

APPLICATION EXAMPLES

- Commercial spaces
- Workplaces
- Showrooms
- Production facilities
- Supply air in industrial halls

DSK EC sound-insulated channel fans

Centrifugal channel fan with EC motor

- Channel dimensions 500 x 250 mm to 1,000 x 500 mm
- Air volume up to 11,990 m³/h

DSK EC sound-insulated channel fans

Article	Article no.	Channel dimension (mm)	Size	V (m ³ /h)	P (watt)

DSK 56 EC	0086.0811	1,000 x 500	560	11,990	2,470

Size: impeller size · V (m³/h): air volume · P (watt): nominal power

PRODUCT FEATURES

- Installation in square ventilation channels
- Particularly quiet due to sound-absorbing lining
- Low energy consumption due to EC motors
- Reduced space requirement due to compact dimensions
- Motor impeller can be swivelled out for cleaning purposes

APPLICATION EXAMPLES

- Commercial spaces
- Workplaces
- Showrooms
- Production facilities
- Supply air in industrial halls

System graphics

DPK / DSK

Our range also includes centrifugal channel fans such as the DPK and sound-insulated centrifugal channel fans such as the DSK. In addition to channel fans, we also supply various sensors and controls as well as air heaters for your individual application. We also offer basic accessories such as outside air, exhaust air and supply air grilles, air filters, disk valves and various shutters. Below you can see an example structure. Channel sections and heat exchangers that must be available on site are shown transparently.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

ROOF FANS

**CONVINCE YOURSELF OF OUR CENTRIFUGAL AND AXIAL FANS
FOR UNIVERSAL APPLICATIONS ON YOUR ROOF.**

Application example

Exhaust air in a machine hall via a roof fan

In industrial production facilities, the ambient air is often affected by heat, dust, dirt, etc. This polluted air must be removed in a controlled manner for various reasons:

- Occupational health and safety for employees
- Clean process air for production
- Avoidance of production impairment due to dirt

In this example, the warm, polluted air rises in the hall. This is drawn in via intake grilles, then conveyed via a ducting run and finally blown out via a fan on the roof. Fresh air can flow into the lower area of the hall.

- ❶ Intake grille, type LGR
- ❷ Roof socket, type SOK or type S0
- ❸ MDR EC roof fan
- ➡ Exhaust air
- ➡ Outgoing air

DAD axial roof fan

Axial roof fan with horizontal exhaust opening

- ➔ Nominal size 630-900 mm
- ➔ Air volume up to 45,000 m³/h

DAD axial roof fan

Article	Article no.	V (m³/h)	P (watt)
DAD 63/6	0073.0080	7,445	370
DAD 63/4	0073.0074	13,274	1,100

DAD 90/4	0073.0077	45,000	9,200

V (m³/h): air volume - P (watt): nominal power

PRODUCT FEATURES

- Housing made of galvanised sheet steel
- Plastic weather protection hood
- Suitable for extracting large volumes of air
- High efficiency
- Low noise level

APPLICATION EXAMPLES

- Large-volume production halls
- System extraction

System graphics

DAD

We are happy to supply the DAD axial roof fan with a matching roof socket for flat roofs and mounting frame. You will also find useful accessories in our portfolio, such as tubular sound absorbers or duct shutters, which you can add on a modular basis. Below you can see an example structure. You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

- ① SGCI contact protection grille
- ② GSI counter socket
- ③ ELI flexible couplings
- ④ VKRI R duct shutter
- ⑤ RSKI tubular sound absorber with baffle
- ⑥ RSI tubular sound absorber without baffle
- ⑦ SOFI insulated flat roof socket
- ⑧ MRI mounting frame
- ⑨ DAD axial roof fan

EZD / DZD / DZD Ex

Our EZD/DZD axial roof fans are also available in the DZD Ex version for environments with an explosion hazard. Our wide range of roof sockets enables installation on a wide variety of roofs – from flat roofs and pitched roofs to corrugated and trapezoidal roofs.

We can also supply you with the appropriate socket sound absorbers to reduce the sound. Our range also includes other accessories such as various sockets, flexible cuffs, counter flanges, control shutters and suction nozzles. On the right you can see an example structure. Folded spiral-seams ducts, which must be available on site, are shown transparently. You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

EHD

The EHD mini centrifugal roof fan can be optimally combined with a protective grille and an automatic backflow preventer as shown.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

- ① AVM automatic backflow preventer
- ② SGR protective grille
- ③ EHD EC centrifugal roof fan

PRODUCT FEATURES

- Space-saving roof fan with extremely compact dimensions and low weight
- Attractive housing made from galvanised and powder-coated sheet steel
- Aluminium cover
- Highly efficient EC motor
- Steplessly speed controllable

APPLICATION EXAMPLES

- Greenhouses
- Garages
- Construction containers
- Foreman's offices

MDR EC centrifugal roof fans

Centrifugal roof fan with EC motor and intelligent control options

PRODUCT FEATURES

- Attractive housing made from galvanised sheet steel
- Low energy consumption thanks to EC motors
- Integrated service switch
- Variants with pressure constancy
- Variants with constant volumetric flow
- Built-in shutter

APPLICATION EXAMPLES

- Industrial halls
- Production facilities
- Central ventilation systems
- Hotels
- Multi-storey flats

System graphics

MDR

As a system provider, we offer a wide range of solutions for your specific applications. The MDR centrifugal roof fan can be installed on all types of roofs with different roof sockets. With various controls and sensors such as servomotors, pressure and temperature control systems and potentiometers, you can customise your system to suit your individual requirements.

Other practical accessories such as socket sound absorbers and control shutters can also be found in our portfolio. Below you can see an example structure.

You can find the complete range of accessories in various sizes and designs in the catalogue and on our website.

MAICO. THE PROFESSIONALS FOR **Ex FANS.**

In many industries and applications, explosive atmospheres can occur in the form of gases, vapours or dusts. A ventilation system is therefore necessary for explosion protection in order to transport this explosive atmosphere out of the room.

Typical areas in which explosive atmospheres can occur are the chemical and petrochemical industry, hydrogen applications, the food industry, storage of hazardous substances or biogas plants.

MAICO has been a specialist for fans in potentially explosive atmospheres for more than five decades and has the right Ex fans in its product range for a wide variety of requirements:

- ▶ Ex fans for gas or dust atmospheres
- ▶ Ex fans for hydrogen
- ▶ Air volume up to approx. 70,000 m³/h
- ▶ Pressure up to approx. 2,000 Pa
- ▶ ATEX and IECEx approval
- ▶ A wide variety of designs
- ▶ Corrosion-resistant ex fans

OUR EXPERTISE FOR YOUR CUSTOMISED DESIGN: Certain applications or production processes often require special ventilation and air extraction requirements. And that's exactly where we like to show what we can do. Because exceptional requirements are our strength. We will be happy to advise you. Get in touch with us!
