**Quality - Made in Germany**

## WUS Quality supports - since 1905

WUS was founded in 1905 by Wilhelm Ungeheuer as one of the first industrial companies in the field of supports world-wide.

Landmarks in the continuously growing organisation have been the development of one of the first hot dip galvanising plants in the area already 1927 and the development of automatic pipe clamp manufacturing facilities already in 1973.

Today, WUS is one of the leading manufacturer of pipe clamps and supports made of steel, stainless steel, copper and other materials in Germany with a output of 22.000.000 clamps in the year 2000.

## WUS production technology

Ever since, WUS developed and constructed own tools and machines for the production process in order to safe-guard the high quality level of the products and a good value for money ratio.

Today a team of 3 skilled toolmaker with Master Degree and one mechanical engineer are taking care of development and maintenance of machinery and equipment.

They continuously improve existing facilities and design and construct new machines and tools.

## WUS and "Made in Germany"

Using WUS supports means using German products.

WUS supports are manufactured in the own factory in Schmitten (near Frankfurt am Main).

Raw materials and small parts like bolts are selected referring to DIN- EN- and other international standards. Even galvanising is made in-house at the latest state of the art.

A strict control process safeguards that all materials fulfil the required specifications.

## WUS and Quality

WUS company principles are to serve the market with reliable products at reasonable prices.

For that reason, products are regularly checked through independent testing institutes. Such tests are made during production and specially for newly developed article. They give safety for the design of the product and the general reliability of WUS materials.

Beside these tests, the materials are checked during the production process with own test equipment and facilities.

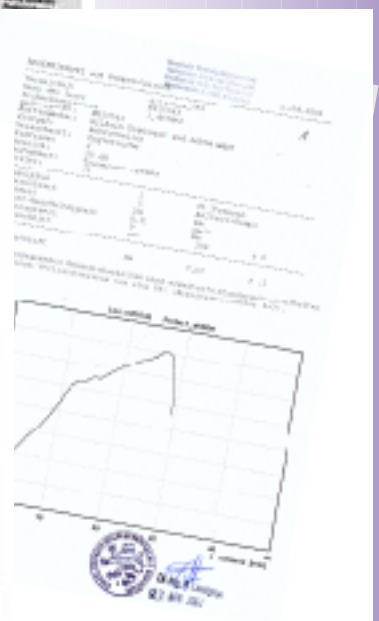

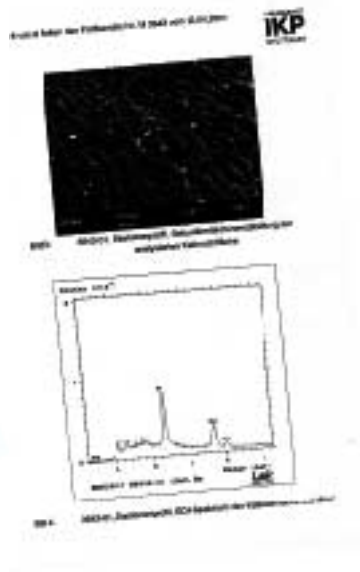

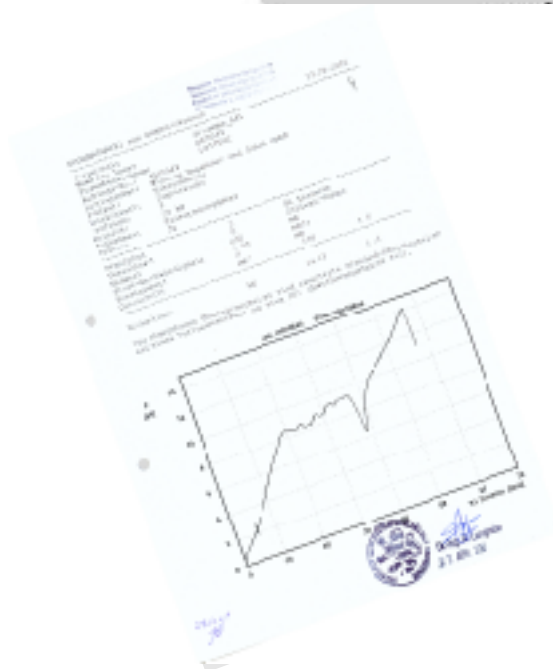

A further and very important factor for the safety of WUS supports is a long

term staff policy which guarantees expert labour at every single production step. WUS materials are produced by experient staff. Most of them working for the company since decades. New team members are well trained before they handle machinery and tools themselves.

Know How and the companies principles are handed over from generation to generation and consequently adjusted to new market requirements.

## WUS and Standards

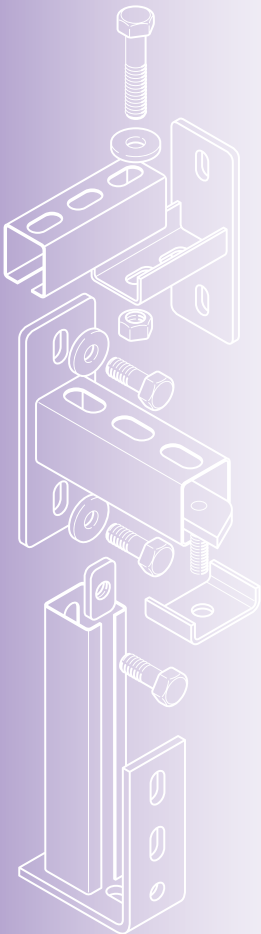

WUS applies different standards on products, raw materials and surface treatments in order to safeguard excellent quality of WUS materials. The mentioned standards are the most important, however only a small selection out of a wide framework of standards, rules and regulations.

WUS - Dämmprofile lining in pipe clamps is designed to absorb noise and vibration from pipework to the building structure. Important characteristics of this high performance material is resistance against ageing, ozone and UV-rays for a long lifetime. Dämmprofile lining is related to following standards:

DIN 1016	Steel
DIN 1614	Steel
DIN 17100	Steel
DIN 17162	Galvanised steel
DIN 50941	Galvanised steel
DIN 50961	Zinc plating
DIN 50976	Hot dip galvanizing
DIN 50981	Measuring of zinc coating
DIN 3567	Pipe Clamps standard version

DIN 4109	Noise level in Buildings
VDI 4100	Noise level in Buildings
ISO 1629	Rubber lining, general
DIN 53505	Hardness of Rubber
DIN 53504	Physical characteristics of elastic materials
DIN 53482	Electrical Characteristics of elastic materials
DIN 78078	Ageing of rubber
DIN 4102	Fire rating
DIN 53509	Resistance against Ozone

## Co-operation with WUS

As a leading manufacturer in the field of supports, WUS is holding reliable stock of standard materials.

Beside the stock materials, WUS offers to the clients the possibility to receive tailored products as per

customer's specification which are produced upon request.

Skilled, multilingual staff is taking care of customers and their requirements.

Don't hesitate to contact us!
