

TRADE FAIR ANNOUNCEMENT

Pioneering system solutions for water treatment:

JUDO at the ISH 2025 in Frankfurt

Innovative system solutions, intelligent system control and water treatment on a large scale: JUDO invites you to ISH 2025 in Frankfurt with these promises – and more. At its new stand in Hall 4.0, Stand C51, the full-service provider will be presenting its expanded range for private households as well as for industrial and building technology – whether softening, alternative limescale protection, filtration or heating water treatment.

Winnenden, March 2025 – As the world's leading trade fair, the ISH in Frankfurt is the number one contact point for the HVAC industry and therefore an important source of inspiration for the water treatment of tomorrow. JUDO particularly appreciates the trade fair platform for personal dialogue with its wide-ranging audience of business partners, interested parties and potential new customers. The new trade fair concept with eight solution areas tailored to the interests of the visitors enables clear orientation and focuses more on the users – for optimum knowledge transfer and needs-based mediation between suppliers and customers. This makes the trade fair the ideal platform for JUDO to cultivate contacts and acquire new customers.

‘The optimised, theme-specific exhibition concept of the ISH makes it easier for visitors to find their way around and enables us to address customers in an even more targeted manner. We look forward to presenting the latest trends and innovations from JUDO Water Treatment to our business partners and interested parties and to shaping the future of sustainable water treatment together.’

- Kathrin Reggi-Dopslaff, Managing Partner of JUDO Wasseraufbereitung GmbH

In Hall 4.0, Stand C51, at the water-bearing systems, the company offers a wide range of applications for the water treatment of tomorrow. With decades of experience, JUDO has the necessary expertise and a product portfolio that is unique on the water treatment market. The innovative, customised technologies are specifically designed to meet the highest quality standards and guarantee optimum protection.

TRADE FAIR ANNOUNCEMENT

The right product solution for every requirement: The water treatment processes for preventing limescale deposits and their consequential damage are diverse – at the ISH, JUDO will be presenting process technologies ranging from dosing units and alternative limescale protection to softening: The i-soft PRO softening technology, the highlight of JUDO softening, will soon also be available for larger properties and delivers the softest water for building services 24/7. Thanks to patented i-salt management, the system continuously and precisely records the salt supply and brine concentration for cost-efficient use. For larger projects, the range of alternative limescale protection is also being expanded with a particularly innovative, environmentally friendly process. The new product will be presented for the first time at the ISH and is the first choice for anyone looking for a sustainable, low-maintenance and economical method of limescale protection – for residential, industrial and commercial buildings.

JUDO also scores with decades of expertise in the field of heating water treatment – from recording water quality to standard-compliant filling. This is reflected not only in the versatile product range, but also in the particularly practical, user-orientated product design. Visitors to the JUDO stand will be able to see the optimised JUDO technology and one or two new products for themselves.

Another trade fair highlight are the intelligent, floor-standing softeners of the SMART GENERATION K, which was recently expanded with the fully automatic i-soft PRO L softening system for buildings and apartment blocks with up to 10 residential units. The system not only provides users with soft MyWater 24/7, but also a solution that combines intuitive operation, functionality and design – including a micro-leakage protection system. Thanks to the use of state-of-the-art technology and digital networking, the system also makes facility management easier: all operating data can be accessed remotely and users are notified when maintenance is required.

Optimally networked with system solutions from JUDO: JUDO has expanded its range of floor sensors to counteract water damage in the best possible way. The JUDO HOME GUARD wireless floor sensor, which was first presented at the end of last year, can help to minimise damage by detecting the presence of water and informing users in good time. In addition to an acoustic warning signal, the floor sensor makes itself visually noticeable via a

round light strip. If it is linked to a JUDO micro-leakage protection system via WLAN, it triggers the system to shut off the water pipe and informs the user via JU-Control APP. Thanks to battery operation with USB-C charging connection, the JUDO HOME GUARD does not require a tedious battery change.

JUDO provides customers with advanced and high-quality solutions for every need. The ZVSHK quality mark 'Certified manufacturer – quality, safety, service' has underlined the high quality standards of the traditional family business since 2019. Comprehensive services are at the centre of the company's philosophy and safeguard the trade – for optimum water treatment without compromise.
