

HEAT GENERATION

Only **no vibrations** are good vibrations.

Reduced vibrations and therefore less space required at the heat generator: our flexible pipe systems enable a direct connection, save costs and are perfectly tailored to your requirements.

● Reduced vibrations

Flexible bellows elements reliably absorb vibrations and make your heat pump quieter.

● Space-saving design

The direct connection reduces space requirements and therefore ensures easy installation even in narrow assembly situations.

● Cost-efficient solution

By using stainless steel, we save on material costs and minimize your installation work by supplying complete assemblies.

Everything from a single source. Everything for your success.

From planning to the ready-to-use pipework: We are your full-service provider. Based on your load cases, we develop tailor-made pipeline that make your devices smaller, more cost-effective and quieter.

Consulting & planning:

We design a pipeline that is perfectly tailored to your requirements.

Development:

We develop flexible pipelines for our customers that are maintenance-free, efficient and easy to install.

Series production:

As a long-standing supplier in various industries, we know the needs of our customers. From prototypes to small or large series.
