Sustainability

‘The world is changed by your example,
not by your opinion’

– *Paulo Coelho*

Hotbath's approach to sustainability

As market leader in the Netherlands, we see it as our job to take the lead when it comes to sustainable business practices. We are constantly looking for ways to reduce our environmental impact and save water and energy: during the production and transport of our taps, at our head office and while using our products.

A true story

Hotbath deems it important to make products that are good for people *and* the environment. And truth be told, we are not there yet. Although sanitary facilities with zero ecological footprint do not exist, we deem it important to take our responsibility. For our staff and for the world we live in.

'You are never too small to make a difference.'

We are constantly looking for ways to improve and become more sustainable. Which starts as early on as the tap design process, at the drawing board, and is also an important point for attention during production, transport *and* usage. Our innovative technologies are ensuring we are making progress in the right direction. Making sustainable bathroom and kitchen taps an ever easier option, for instance.

Hotbath's approach to sustainability

Bathroom taps that save water

Hotbath is constantly looking for water-saving and energy-saving technologies. Without having to make sacrifices in terms of quality and comfort, of course! This is what makes our taps sustainable:

1. Cold Start

According to an environmental advisory service, over 25% of our gas consumption goes on heating water for the kitchen and bathroom. Which is why pretty much all of Hotbath's taps are fitted with a Cold Start, enabling you to save hot water and energy without even noticing.

How does it work? All Hotbath taps are fitted with cold start, in contrast to other single-handle taps, which commonly dispense mixed (lukewarm) water. Thereby activating the boiler or other heat source, which uses energy. Most of Hotbath's taps will only supply mixed or hot water once the handle is turned.

2. Saving water with a washbasin mixer

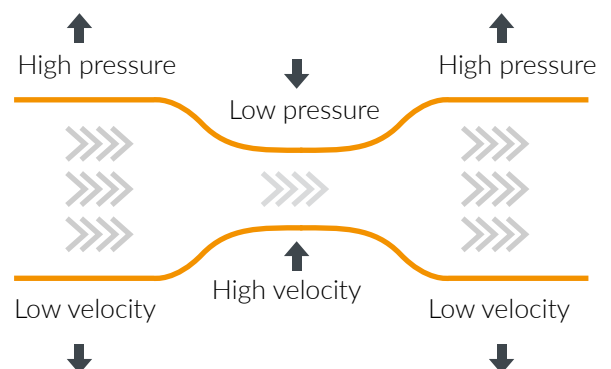

Whether you prefer built-in or surface-mounted, all washbasin mixer taps feature an aerator that regulates the flow of water from the tap. Thanks to this built-in limiter, Hotbath's taps dispense just 5.7 litres of water a minute. For comparison, 9-10 litres was the norm previously.

3. EcoAir System

Thanks to our EcoAir system, all our surface-mounted overhead showers will save you water. The system adds air to the flow of water. A constricted section has been introduced into the ball joint, increasing the flow rate of the water. Change Giving rise to contributing to a drop in pressure, which sucks water in and mixes it with the water. This is also called the Venturi effect. Hotbath's rain showers consume just 9 litres of water a minute.

Venturi Effect

4. Shower Power System

Our Shower Power System ensures an even distribution of water within the overhead showerhead, creating a fantastic shower experience with minimal water supply. A patented cartridge membrane system in the showerhead is used for this purpose.

5. Factories

Just as much attention is given to environmental impact during production as to during the design of the taps. Hence during production the factories' efforts are focused on:

- Separated waste collection
- At least 30% of packaging being made of recycled paper and cardboard
- Products only being supplied in 100% recyclable packaging
- Production using energy-saving machinery
- Water recovery in test labs

6. Transport

Hotbath's products are manufactured in Italy and are sold globally. It's the distributed products that are shipped via train in the Netherlands, Belgium and the United Kingdom. The taps and accessories are transported by train from the factories before being delivered to Hotbath's warehouse by lorry. Thus reducing CO₂ emissions. What's more, the lorry drivers in the Netherlands use automated route planning geared towards energy-efficient fuel consumption.

7. Head office in the Netherlands

At our head office in Alblasterdam, we do our utmost to make our processes as sustainable and efficient as possible. Properly looking after all of Hotbath's staff is part of that. Recently implemented sustainable initiatives include:

Warehouse:

- Full-colour printed boxes replaced with brown, environmentally friendly boxes
- Boxes used for shipment contain 0% plastic
- Plastic filler material in the boxes has been replaced with recycled paper
- Foam filler material has been replaced with cardboard varieties

Office:

- LED lighting has been installed in the premises
- Old paper, printer toners and batteries are being collected and recycled
- The staff are using water-saving overhead showers from Hotbath

Dutch Design combined with Italian production

Inspiring work

All work is geared towards guaranteeing the integrity and reliability of our products. At the end of the day, more than anything our quality stems from the professional skill of our staff.

Italian craftsmanship is well known across the globe for its precision, style and quality. The manufacturers who produce the inner workings for Hotbath's taps are among the finest in the fields of fine metalwork, chrome plating, thermostat technology and assembly. Situated on Lake Orta, these factories are a repository of knowledge and expertise, staffed by craftsmen dedicated to and passionate about perfecting the art of tap technology.

The region surrounding Lake Orta is not so much an industrial hub as a sacred space for Italian craftsmanship, where traditional know-how and modern technology converge, enabling the creation of taps that are astonishing both functionally and aesthetically. Each and every detail, from the shape of the handle to the surface finish, is designed with meticulous care and attention.

Quality is the core value espoused by the factories at Lake Orta. Each part and fitting is subjected to stringent checks to ensure that they satisfy the highest standards. Moreover, every part is produced and inspected by hand, from the smallest handle to the most delicate overhead shower. The brushed finish of all products is done by hand, lending them an artisanal look and making every tap unique.

Archie

①

②

③

④

Tough, stylishly designed
collection made of the very
finest stainless steel

Archie is a boon in any modern bathroom, kitchen and toilet due to its stylish image. In contrast to our other taps – which are made of brass – the Archie tap collection is the only one to be made entirely from high-quality 316 stainless steel. This is stainless steel of the very highest standard of quality, exceptionally resistant to moisture, dirt and high temperatures. The material's indestructible nature makes it an exceedingly sustainable choice. Moreover, the collection features three PVD finishes: brushed brass PVD, brushed copper PVD and brushed gunmetal PVD.

Taps of the highest quality

Whichever version of Archie you go for, one thing is certain: this tap exudes pure class. Archie comes in various sizes and is characterised by its slender outlet. Whether you opt for a washbasin mixer, a trendy freestanding bath mixer, a luxurious cascade from the wall or a bathroom waterfall, our matching accessories (also in high-quality 316 stainless steel) will enable you to create a coherent bathroom aesthetic. We work closely with the very best tap technology specialists in Italy; choosing Archie means benefiting from Italian craftsmanship and design.

! Keen to find out about the other models in our Archie collections? Ask your sanitary facilities advisor about the options!

Hand shower AR353

Vinyl Touch

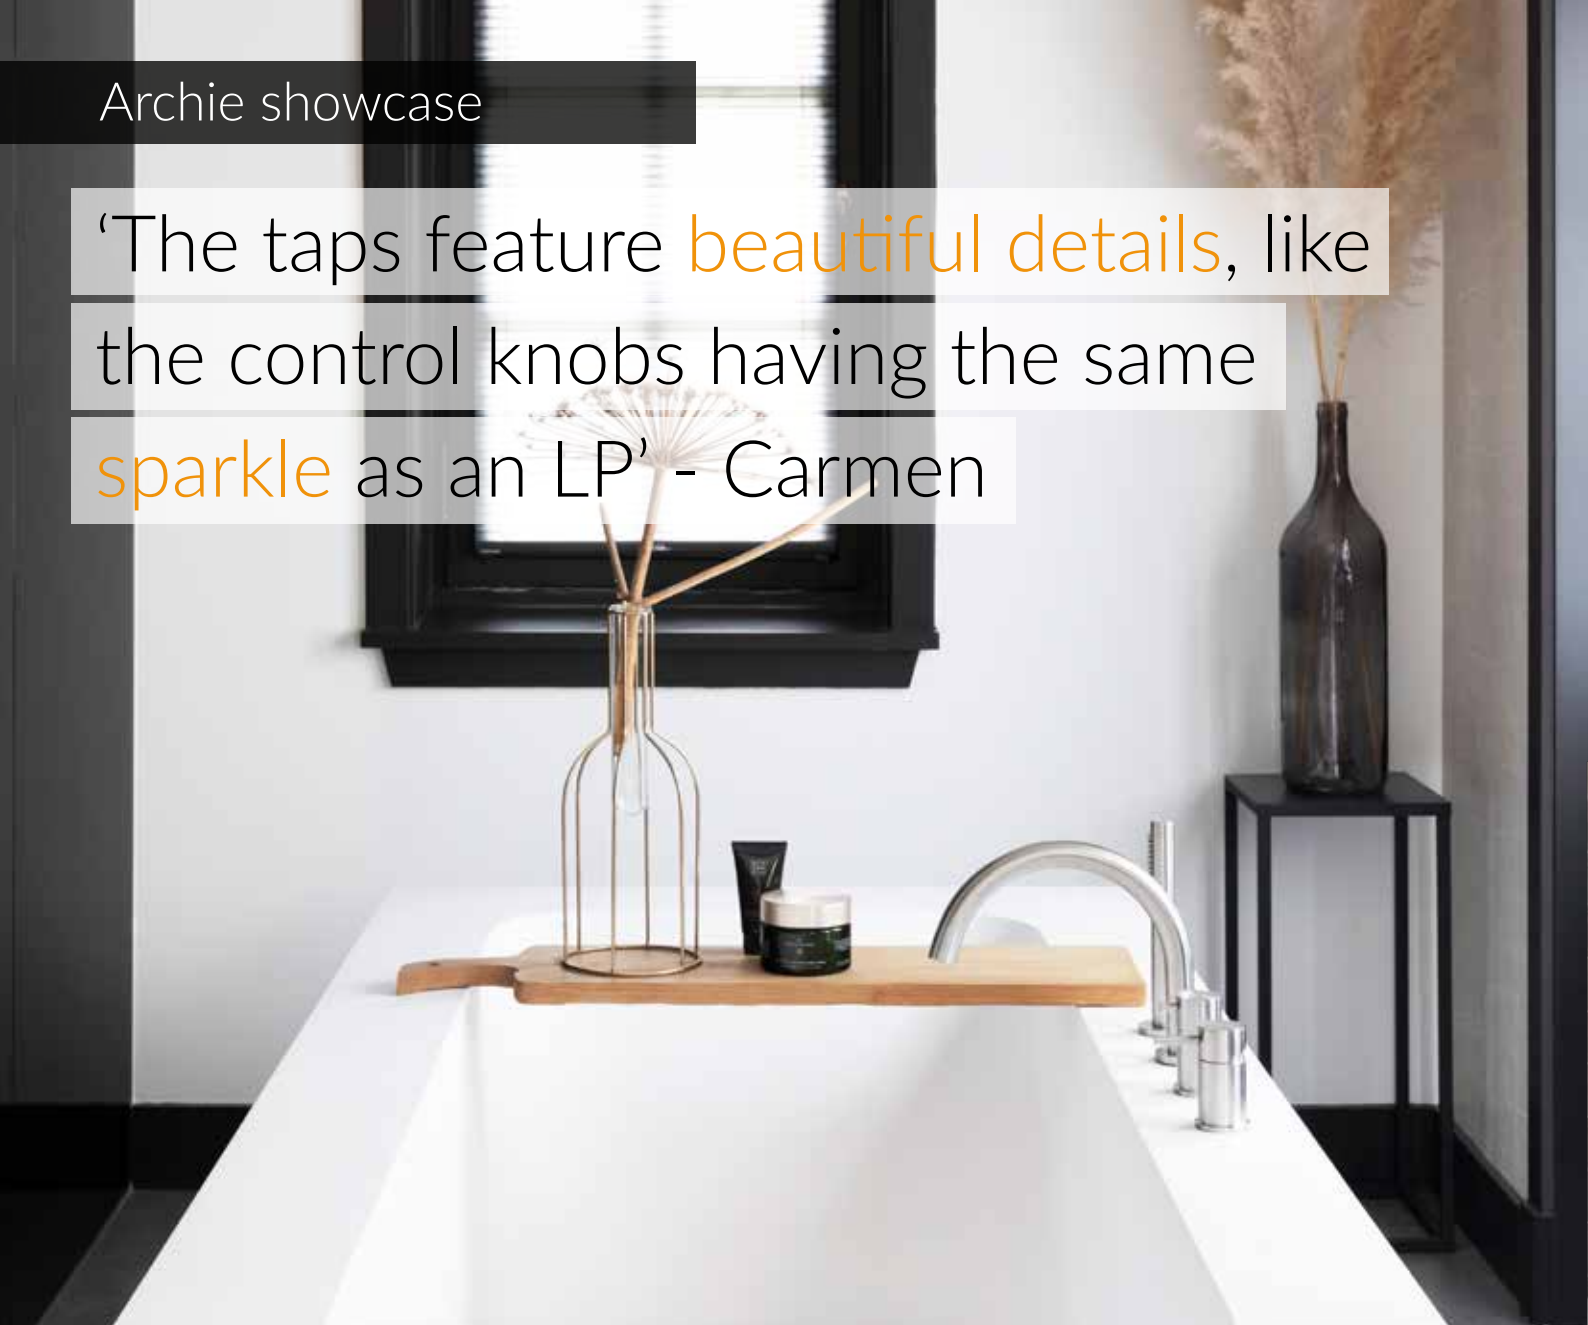

The finish on the control knob of our Archie collection reflects light just like a gramophone record and lends the tap that little extra touch. No other tap sparkles like this one in the right lighting. The brushed finish will make the tap the centrepiece of the bathroom.

The benefits of Archie:

- Rock-solid and virtually indestructible
- Hygienic and easy to keep clean
- Stylish due to the magnificent Vinyl Touch
- Sustainable: 316 stainless steel means the collection is built to last for many years
- Plumber-friendly: easy to install
- 10-year warranty
- No hot water wasted thanks to the Cold Start
- Three PVD finishes

① Built-in rain shower AR111 ② Shower corner basket ARA21 ③ High Flow thermostat ARHR2 ④ Wall support set AR440 ⑤ Freestanding bath mixer AR077 ⑥ Surface-mounted washbasin mixer AR003H

‘The taps feature beautiful details, like the control knobs having the same sparkle as an LP’ - Carmen

📍 Veghel, North Brabant

Who Carmen (35, Director Category Bakery), Mike (28, property maintenance) and cat Jimmie **Where** Veghel **Property type** Detached 1930s house spanning 250 m² **Bathroom** approx. 20 m² **Fun fact** The 200 kg bath had to be hoisted into the house with a telehandler **Instagram** @carries_casa

Dream bathroom bursting with character

Carmen and Mike spent roughly a year renovating their 1930s house themselves. With its smoked glass shower wall, rectangular bath and taps made of 316 stainless steel, their bathroom is truly special. Carmen thinks it is the most beautiful room in the house. Decide for yourself and get inspired!

The taps feature beautiful details

After more than a year of renovation work, Carmen and partner Mike's detached 1930s house is nearly complete. Carmen coordinated the renovation and they did nigh on everything themselves, with a little help from family and friends. The dated 6 m² bathroom with mint-green washbasin and beige tiles was expanded to create a luxury hotel-style bathroom spanning approx. 20 m².

They sacrificed one bedroom to free up the additional space for the bigger bathroom. Carmen is not a fan of safe choices and likes doing things a little differently.

'We've got a smoked glass shower wall that runs all the way up to the ceiling and there's a bespoke, oblong bath in front of the doors leading onto the balcony. The image exuded by the taps is extremely important.

'The control knobs have the same sparkle as an LP'

I ruled out chrome or black straight away – too shiny, too faddish. In the end we went for the stainless steel Archie collection. The stainless steel is brushed, giving these taps a matt

finish. I'd describe the taps' design as simple, timeless and luxurious. They feature beautiful details, like the control knobs having the same sparkle as an LP'

Bath and bath rim combination

Carmen is up and about at six in the morning and is always on the go. 'Sometimes I've got to hit the brakes and grab some peace and quiet. How? I like having a bath and spending more time in the bathroom, particularly in the winter. There's a great view from the tub of a wooden beam of that was part of the old hearth and which we've incorporated into the ceiling. The beam separates the old bathroom from the new one. Rather than a freestanding bath mixer, which is a common sight these days, we wanted

an Archie AR073 bath rim combination. It's gorgeous! We can pull out the hand shower and use it to rinse the bath clean. We largely did the renovation work ourselves, so it was really useful that Hotbath's website provides a clear technical overview of all its taps. The bath is bespoke, and I let the factory know beforehand the dimensions of the spout and shut-off valves to enable them to drill the holes into the bathtub rim.'

The Archie AR005 built-in washbasin mixers caught Carmen and Mike's eye. 'We gutted the bathroom, giving us plenty of options in terms of concealing all the pipes. It makes cleaning a smoother, more practical process', says Carmen. 'And no more limescale deposits on the washbasin!'

Bathroom, toilet and kitchen taps for any style

Hotbath's success story started with the Dude fountain tap, but soon grew to encompass a complete collection of fountain taps. The range now comprises a wide array of bathroom, toilet and kitchen tap collections for any style. Several collections have even been extended to include matching accessories.

1. Washbasin taps

Washbasin taps come in all kinds of style and finish. Hotbath offers a variety of designs, such as surface-mounted and built-in taps, meaning you will always find the perfect match!

2. Cold water taps

A fountain tap is specifically designed for use in small sinks or washbasins. The really striking thing about fountain taps is the variety of styles and designs available.

3. Bath taps

Hotbath offers a plethora of bath taps. Including freestanding bath mixers, thermostatic valves with a cascade spout or stunning bath rim or bath filling combinations.

4. Kitchen taps

Hotbath kitchen taps come in a wide array of designs, finishes and functionalities. From classic to industrial or modern, there will always be a kitchen tap that matches your kitchen's style.

5. Shower sets

An extensive range of both built-in and surface-mounted shower sets makes it easier than ever to strike the right balance between functionality and style. The shower sets can be configured entirely to your liking, meaning you will always find a suitable combination available.

! Keen to find out more about our full range of taps? Ask your sanitary facilities advisor about all the options!

6. Overhead showers

Hotbath's impressive overhead showers have been designed to provide you with the perfect shower experience. Various types of overhead shower are available, each with their own unique characteristics and benefits.

7. Hand showers

The perfect shower set needs a matching hand shower too. Choose a wand-style hand shower for a sleek appearance. Or an elegant round hand shower.

Quality, Design and Technology.

This is the Hotbath collection that
blends everything.

The benefits of Gal:

- Choice of five finishes, including three PVD finishes
- Bathroom accessories in the same finishes as the taps are available
- 10-year full warranty
- High-quality materials, such as the high-quality inner workings from Flühs
- No hot water wasted thanks to the Cold Start

Gal is the new girl in town. The perfect girl among Hotbath's boys. It is the collection that blends all of Hotbath's quality and technology. At the heart of this collection lie perfection and the peace of mind that comes with our 10-year warranty. Gal comprises only high-quality materials and parts, such as the first-class inner workings from Flühs.

This collection is extremely comprehensive, from built-in shower set to fountain tap and matching accessories, enabling you to equip out your whole bathroom with Gal. Her refined, bold shapes make Gal a real asset for any bathroom. The Gal tap collection is available in chrome, matt black, brushed brass PVD, brushed gunmetal PVD and brushed nickel PVD.

Peace of mind and perfection

The Gal tap collection has been designed using extremely high-quality materials and comes with a 10-year full warranty. It is no coincidence that peace of mind and perfection are at the heart of this collection. In this collection we have made turning on and off even smoother and easier due to the New Smooth Control technology. This technology mixes the water so smoothly that what would otherwise be an unconscious action feels surprisingly different.

Keen to find out more about the other models in the Gal collection? Ask your sanitary facilities advisor about the options!

‘Everything is that little bit different in this bathroom’ - Lotte

Muiden, North Holland

Who Lotte (37, interior designer and 3D relief artist), Rick (37, bank employee) and their daughters Bo (5) and Emma (3) **Where** Muiden

Property type A wooden barn-style house spanning 210 m² **Bathroom** 9 m² **Fun fact**

The bedroom features a walk-in closet with a washbasin unit and washbasin mixer Gal (GL003H)

Repeat business for Hotbath

Lotte and Rick moved to Muiden with their daughter in 2019. Lotte designed the entire interior and chose Cobber taps for both bathrooms. Four years on and with another daughter in tow, the family has just moved to their dream house not far away. And again they have gone for Hotbath, even if they have pretty much changed everything else!

Lotte: ‘Back in 2019, Hotbath was one of the few brands to be featuring coloured taps. I was keen on getting matt black built-in Cobber taps for our bathrooms and it worked out well.’ Four years on and with another daughter in tow, the family has just moved to their dream house not far away. A detached, wooden house situated on the water. And again they have gone for Hotbath. ‘We did consider other brands too, but Hotbath really stands out in terms of price-quality ratio, design and options. In our previous property we were delighted with our taps, so it was an no-brainer.’

New bathroom, new tap

Lotte and Rick had two bathrooms in their previous house, though in practice they only used one. This time round they went for one bathroom plus an extra washbasin unit with a Gal (GL003H) washbasin mixer in their bedroom. 'No doubt the girls will spend more time in front of the mirror once they're taller. So having an extra washbasin will come in handy.

'I'm already noticing that it's a great spot'

Lotte was eager to take a slightly different approach in this house to last time. Hence they have gone for

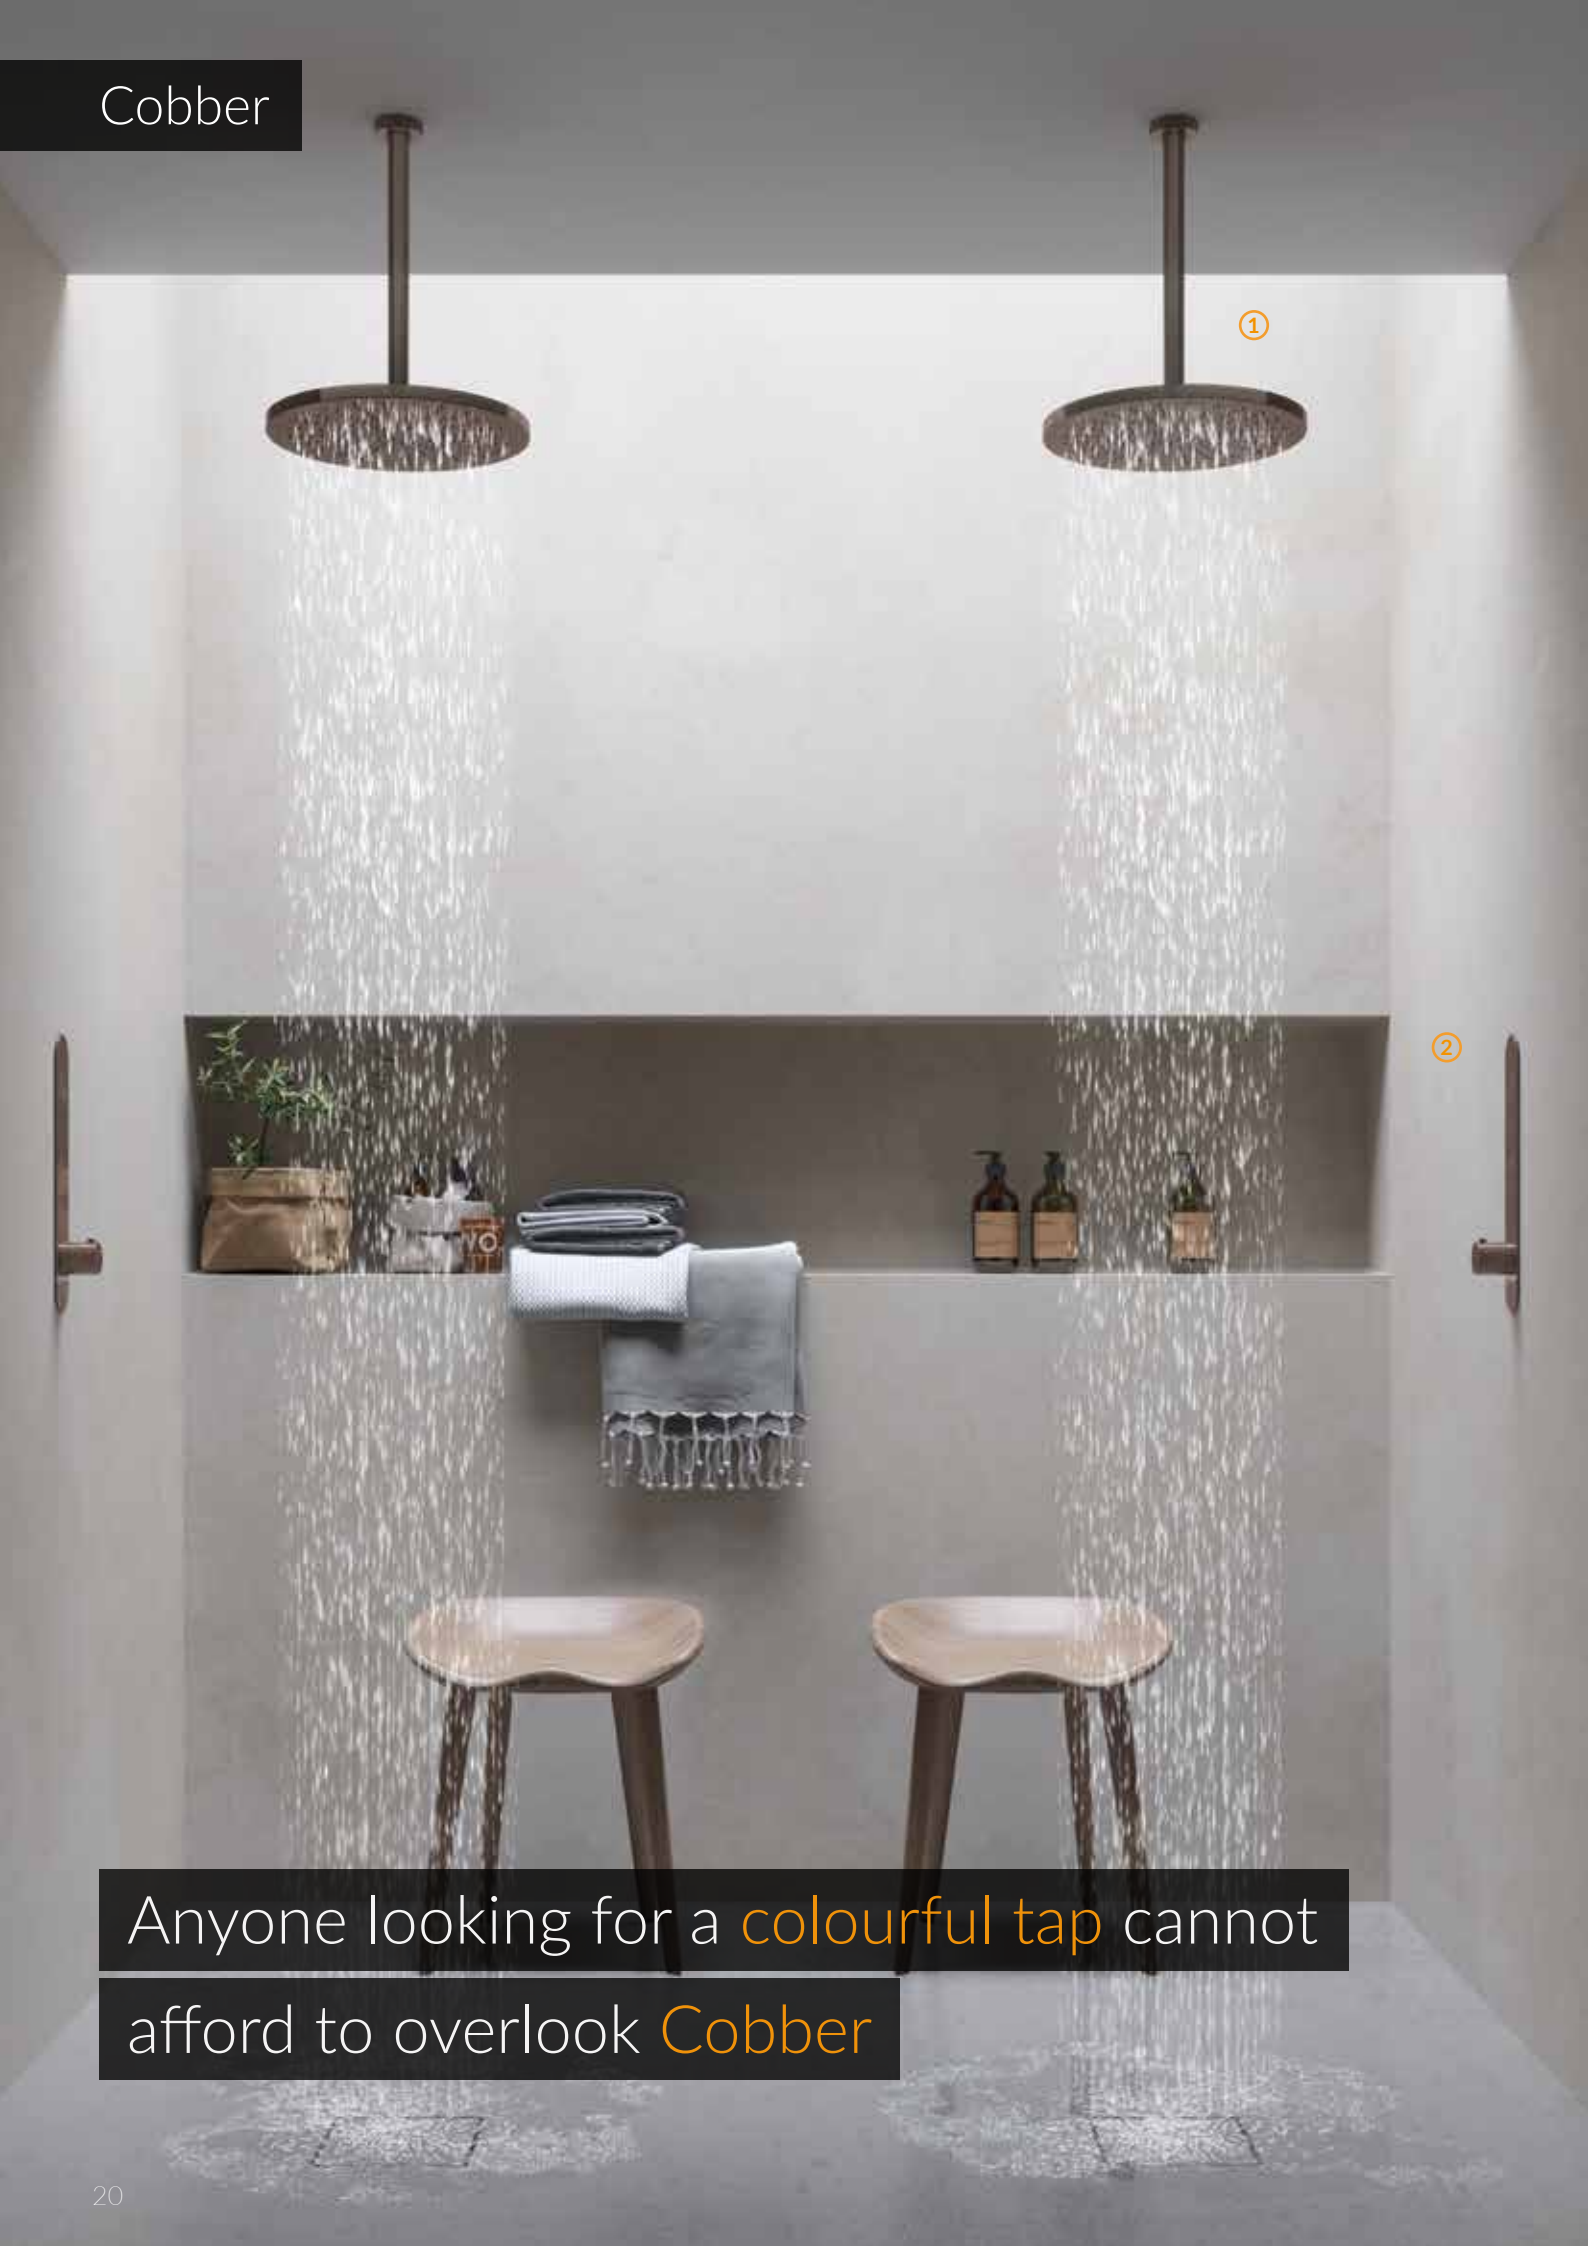

one washbasin in the bathroom rather than two, the recess in the shower has been replaced with a plateau and they chose a different model of tap. I think Cobber is stunning, but I wanted a bit of a change. And that coincided with Hotbath launching a brand-new collection of taps. Gal has a bold appearance due to its angular lines and that really appealed to me. A welcome break from all the round shapes that are so in vogue at the moment. The brushed brass finish fits in well with the materials in our bathroom: a dark-stained oak unit, ceramic tiles with a natural stone pattern and a white Solid Surface bath. The taps feature a PVD (Physical Vapour Deposition) coating to prevent the colour from fading. I love clean and new, so taps with a

vibrant patina are great but they're not my cup of tea.'

Luxury carwash

One of Lotte and Rick's wishes was a large walk-in shower. 'Rick and I pretty much never use the bathtub. My life is too hectic. But we love a shower. Our shower is 1.75 metres deep and has a shower bar (GL311) with a hand shower (Cobber M353) and a rain shower behind that (GL100). I also call it a luxury carwash', she laughs. 'It's great that we can pile into the shower with the kids and make the process of getting ready that bit quicker during the week. ■

Cobber

①

②

Anyone looking for a colourful tap cannot afford to overlook Cobber

The benefits of Cobber

Cobber is the most versatile collection, being fully adaptable to your own style. Whether you are looking for a washbasin mixer or a fully fitted bathroom, the options presented by Cobber are endless.

Benefits of the tap include:

- Choice of no fewer than thirteen finishes
- Living colours change naturally
- Three finishes with a unique PVD coating are available. Which makes the finishes more robust, scratch-resistant and ensures the perfect sheen
- Bathroom accessories in the same finishes as the taps can be added
- 10-year warranty on the inner workings from Flühs
- No hot water wasted due to the Cold Start

It is the trendy designer tap, blending form, innovation and colour and unsurprisingly being one of Hotbath's most popular tap collection.

Designer tap Cobber's unique finishes

Cobber comes in no fewer than thirteen finishes. The tap is available in beautiful matt black or trendy brushed brass, for instance. Veritable eye-catchers in a modern bathroom, dovetailing with the latest trends. If you would prefer a timeless tap, then you might wish to go for chrome or brushed nickel.

Or choose one of the Living Colours such as brushed brass, natural brass, aged brass or brushed copper. These taps have no surface protection in the finish, enabling the colour to change naturally. Over time, physical contact and other external influences will make the taps take on a life of their own and the material will develop a unique patina.

- ① Overhead shower M106 ② Built-in thermostat with pushbuttons PB050

‘As a copper wire company you choose brushed copper!’ - Monique

📍 **Berkel en Rodenrijs, South Holland**

Who Monique (midwife), Hans (owner of a technical trading firm) and their children Simone (19), Hugo (17), Olivier (17) and Ralph (13) **Property type** Detached corner house built in 2022 and spanning 190 m² **Bathroom** 9 m²

Fun fact The twins have their own bathroom in the attic

‘We like a nice, slow start at the weekend’

Monique's job as a midwife means she sees a lot of bathrooms in other people's homes. The inspiration she has taken from these came in handy when she and her husband went looking for a new bathroom. A green herringbone tile was high on their wish list. Except she ended up coming home with something completely different...

A couple of years ago Monique and husband Hans found themselves faced with a dilemma: renovate or move house? They chose the latter and moved to a new-build property not far away, which left them looking for a new bathroom. Monique: ‘My job as a midwife means I see a lot of bathrooms in other people's homes. Which is how I came up with the idea of having a wall featuring a green herringbone tile. I even made a mood board giving pride of place to the green tile. When we visited bathroom specialist Joost Post we fell in love with a green marble-look tile measuring 120x120 cm. Something completely different to what we had in mind, but we've not regretted it for an instant. We're delighted with our new bathroom.’

Perfect match: brushed copper

The marble-look tile forms the starting point and Monique and her partner are looking for bathroom furniture and taps to match. 'We discovered Hotbath's taps on our visit to the bathroom specialist. Fantastic! Our building contractor came along to the appointment and as it turned out he had plenty of experience with Hotbath. We went for the Cobber tap collection. We soon agreed that the brushed copper finish would be the best match for the green marble-look tile. Hans owns a firm that specialises in copper wire, so that's a funny coincidence.'

The brushed copper finish is one of Hotbath's Living Colours. These taps change colour naturally, and using them gives them a vibrant patina. Monique chooses to have a PVD (Physical Vapour

Deposition) coating on the taps. This will keep the taps looking like new. 'I thought having a protective coating for the taps would be important to preserve their beautiful appearance. One nice touch is that the Instamat towel warmer has exactly the same brushed copper colour as the taps.'

These taps change colour naturally.'

Twice the joy with two washbasins

Monique is eager to have built-in taps in the new bathroom. 'Because of the

aesthetic effect. I find them better-looking and sleeker than surface-mounted taps. We chose to have two washbasins, just as we had in our previous bathroom. The washbasin mixer (CB005) buttons are both to the right. I like symmetry, you see. Hans and I aren't often in front of the mirror at the same time, but we do also share the bathroom with two of our children.' ■

Seventies collection

③

Unique in the world
of bathrooms!

① Built-in bath thermostat with spout CB7072

Seventies collection

Unique collections in the sanitary industry!

True eye-catchers with a subtle 'edge' – that is what our Cobber Seventy collection stands for. Made of robust brass and finished with the most refined escutcheon plates on the market, with a diameter of just 72 mm. True Italian craftsmanship!

Why Seventy?

The name Seventy refers to the slimline escutcheon plates measuring just 72 mm in diameter. Unique in the world of taps, as regular escutcheon plates usually have a bigger diameter with different dimensions and a coarser look. This is not the case with the Cobber Seventy: the thermostat button and the buttons to operate the shower and/or bath taps are all of the same size. Creating a fantastic result!

Can be configured entirely to your liking

The collections comprises three kinds of built-in tap: a shower thermostat (CB7067), a bath thermostat with spout (CB7072) and a shower and bath thermostat without spout (CB7071). The taps can be configured entirely to your liking; with a choice of three types of handle, 13 finishes and a free choice in terms of hand shower or extra-large rain shower, for example.

Horizontal or vertical

The Seventy collection will be a truly unique addition to your home. Lending your walk-in shower a sleek, modern look. The built-in shower thermostat with two shut-off valves (CB7067) can be installed both horizontally and vertically. Whatever ensures maximum ease of use and the most beautiful look in your bathroom. The built-in shower and bath thermostat with shut-off valves and optional spout can only be installed horizontally (CB7071 and CB7072).

Technical marvels

The Seventy collection built-in products are not only great to look at but also technical marvels. You see, all the technology is neatly concealed right behind the unobtrusive escutcheon plate. If some maintenance work is required after many years of showering pleasure, then that will always be possible without needing to call in a builder. Useful!

The technology is powered by Flühs!

All our taps are fitted with high-quality inner workings from German company Flühs Drehtechnik. The world's largest, most innovative company in the field of inner workings and turning technology in the tap industry. Their high-quality inner workings make our taps an exceptionally sustainable choice, enabling you to enjoy taps from the Seventies collection for many years to come.

Craftsmanship

crafts·man·ship

quality of design and finished product; skill with which something is made by hand; artistic talent.

Quality and Design

Hotbath is a Dutch company comprising an international team of specialists in the design and production of bathroom, toilet and kitchen taps. Hotbath strives to develop high-quality taps that meet market demand and dovetail with contemporary bathroom trends.

For reasons of quality, our production is done entirely in Italy, quite simply because that is where the world's best specialists are.

The manufacturers that Hotbath's network encompasses are among the finest in the fields of fine metalwork, chrome plating, thermostat technology and shower system development.

FM Mattsson Group

Hotbath was fully taken over by Swedish multinational FM Mattsson Group on 14 May 2019. The group consists of several strong, established brands all engaged in the production, development and sale of bathroom, toilet and kitchen taps.

'The group wants to provide customers with a real wow factor'

Advanced technology, craftsmanship, high quality, aesthetically appealing design and environmental friendliness are key aspects of the production process. The group's vision is to be customers' first choice in the bathroom, toilet and kitchen and to provide them with a real wow factor.

①

②

The coolest accessories for your bathroom

Just got a new bathroom? Bathroom accessories provide that finishing touch. Make your bathroom cohesive by choosing accessories that match the colour of your taps. Looking to give your existing bathroom a makeover? Bathroom accessories are perfect for that too!

Black bathroom accessories

They might not be the first things you think of when getting a new bathroom, but accessories often provide the finishing touch. They maximise ease of use and comfort and give the room a luxurious appearance. A **towel rail** will ensure that you always have a clean (and dry!) towel to hand and a **wall-mounted soap dispenser** will lend the room that classy hotel bathroom feel. Black bathroom accessories are popular. If you already have black Hotbath taps, a shower wall with black detailing or a black designer radiator, then echoing that colour in accessories such as a **toilet roll holder**, **hooks** and a black **click plug** in your basin will be a great touch.

Bathroom accessories in the shower area

Contemporary bathrooms are featuring an increasingly broad palette of colours of material. Forget chrome or stainless steel and imagine matt black taps, copper-coloured soap dispensers or a rain shower in brushed brass. Cobber is Hotbath's colourful collection of taps. The taps and matching accessories come in no fewer than 13 colours. Customers are increasingly going for brushed finishes over glossy finishes. Prefer brushed brass or brushed copper? You can have these same finishes for the bathroom accessories in your shower room. Refrain from putting your shampoo and shower gel on the floor or your shower thermostatic valve, as that

is a sure way to encourage limescale build-up. Instead, use a space-saving **wire corner basket**, a **double wire corner basket** or a **soap dish**. Hang a **towel rail** within easy reach of your shower (or walk-in shower) so you can wrap yourself in a nice soft towel once you have finished showering. Lovely!

Cobber X

①

Looking for a **special** tap?

Choose the unique **artisanal handle**

from the Cobber X collection!

Unique finish

Turning on a tap has never been so special thanks to Cobber X! Features of this collection include:

- Artisanal handle
- Available in four finishes
- Three different mounting options
- 10-year warranty on the inner workings from Flühs
- No hot water wasted thanks to the Cold Start

Cobber X throughout your interior

Cobber X is well suited to both bathroom and kitchen. The unique knurling is a recurrent feature in the collection, making it easy to create a cohesive theme. You might wish to go for a magnificent freestanding washbasin mixer or a fully built-in thermostat with a variety of control knobs. And Cobber X in the kitchen? No problem!

Looking for a special tap? Look no further than the **Cobber X**, which comes with a handle that features unique, rugged engraving. The inviting artisanal handle makes you want to touch and use the tap. This detail makes Cobber X a bold, striking feature in any bathroom and kitchen. Not only is the tap beautiful to look at, it also stimulates your senses.

Tap with its own character

Cobber X has four finishes to choose from: chrome, brushed nickel, matt black and brushed brass PVD. Whichever finish you choose, the artisanal handle will stand out beautifully. You might go for brushed brass PVD, for instance – a brushed finish with a touch of gold that will immediately set the tone in your home. The PVD coating makes the tap even more robust and scratch-resistant and lends it a wonderful sheen. Make a statement with matt black or add atmosphere with the warm glow of brushed nickel. Chrome exudes a timeless beauty and is an all-time favourite.

SCAN THE QR CODE AND WATCH THE VIDEO!

‘Plenty of taps look the same, but Hotbath’s taps are anything but ordinary’ – Vincent

Veghel, North Brabant

Who Vincent (46, client manager in IT) and Janneke (49, teaching assistant) **Where** Purmerend **Property type** flat spanning 120 m² **Bathroom** 10 m² **Fun fact** In addition to the washbasin taps and shower taps, pretty much all the accessories and the separate toilet are from Hotbath too.

Like being in a luxury hotel

Vincent and Janneke were on the point of selling their beautiful flat in Purmerend city centre. But now that they have turned their old-fashioned bathroom into a luxury private spa, they no longer want to leave.

Vincent and his wife Janneke generally like travelling. From the Maldives to Santorini in Greece, they have already been to a great many places across the globe. And when they are on holiday they like staying in beautifully furnished hotels. Which is where they drew inspiration for their new bathroom. Vincent: ‘We wanted to create the feel of being on holiday in a luxury designer hotel in our bathroom. It needed to be a no-frills sanctuary where we can escape from day-to-day life. And we think we’ve done a pretty good job of it!’

Taps with a rough edge

For their new bathroom, Vincent and Janneke also drew inspiration from Pinterest and Instagram, which is how they found Hotbath. ‘Plenty of taps look the same, but Hotbath’s taps are anything but ordinary. We first saw the special edition Cobber X

tap in the showroom. The handle has a rough, rugged finish, which immediately won us over. The taps are real gems in our bathroom.

'Our Cobber X taps are real gems in our bathroom'

They're not only stunning but also very practical to use. Turning them on and off is really easy even when the handles are wet. We soon settled on matt black taps. Last year we restyled our lounge, which features plenty of black detailing too. We wanted that echoed in the bathroom.'

Turning showering into an experience

Taking inspiration from the hotels they

have stayed in, Vincent and Janneke chose to have an extra-large walk-in shower. The icing on the cake was an overhead shower with a diameter of at least 30 cm, which is the biggest showerhead in the Hotbath collection. 'We sometimes need a shower at the same time and it's possible to both stand under the big rain shower. We've incorporated lighting and speakers into our suspended ceiling, which we designed ourselves. We'll often put on some relaxing music in the shower, like the sounds of nature or crickets. Turning showering into a proper experience. We haven't been able to do any long-distance travel recently, but now we can go on a journey in our bathroom every day.' The couple had a water pressure booster and water softener fitted to ensure that they always have enough water pressure and to minimise cleaning. 'We use the hand

shower regularly too and wouldn't want to be without it. We were surprised by the quality of its spray. Prior to this we had a bath too, but we haven't looked back since!'

Accessories for the finishing touch

Vincent and Janneke chose to have all their taps – from their washbasin mixers to their shower taps – built in. They had the shower thermostat and the two shut-off valves fitted vertically to ensure a bold, sleek result. ■

Grego van den Broek

WONDERFUL WELLNESS

For many years now interior architect Grego van den Broek has been using Hotbath taps in his interior designs. For this townhouse in Breda he designed a whole new interior in a warm, minimalist style. The luxury bathroom – or wellness room, you might say – is perhaps the most beautiful room in the property.

One large glass pivot door with slender wooden profiles opens from the bedroom onto the spacious bathroom in this townhouse in Breda. The bathroom is approximately six by six metres and the occupants were struggling with the layout for such an ample room. Leave it to Grego van den Broek from Grego Interior Architects. He and his team designed a warm, minimalist bathroom featuring an island comprised of dark brown oak and luxurious Taj Mahal quartzite. The floor, walls and ceiling have been finished with sand-coloured microcement. 'These materials combine beautifully with Hotbath's brushed brass taps', says Van den Broek. 'Just that little bit warmer and more stylish than black taps, for instance, which are beautiful too, as it happens.'

'Being able to choose from no fewer than thirteen colours is a bonus. There aren't many brands that offer such variety.'

First the walls, then the taps

'When designing a bathroom I quite often start with the wall finish, such as tiles or microcement, before moving on to woodwork and taps. The taps get chosen early on in the design process because they help set a room's image.' Van den Broek frequently works with Cobber collection taps due to the broad selection of models and colours. 'The taps in this collection are timeless, functional and clean and that ties in neatly with our style. Being able to choose from no fewer than thirteen colours is a bonus. There aren't many brands that offer such variety.'

Two washbasin mixers (CB033) have been installed in the bathroom island. 'The taps have a beautiful arch to them. The bathroom has a lot of straight, sleek lines, and the rounded shapes interrupt that.' One striking detail is that the taps have been fitted behind the washbasin, whereas the buttons are situated to the side. 'Having to reach over the washbasin to turn on the tap doesn't make sense. That's why we positioned them on the side. We like surprising people and doing things a little differently. The occupants think it's a nice touch and really practical.'

We tend to use a set template for our bathroom layout, but as Van den Broek shows, this need not be a foregone conclusion. 'The occupants wanted a calm, serene vibe for their bathroom. Which is one reason why we chose not to hang any mirrors above the washbasin. Thus preserving the room's light, open character.' They do have a mirror, of course, next to the island, dovetailing with the bathroom's style. There is even a make-up corner with an additional mirror for the lady of the house. And a floor-mounted freestanding bath and bath mixer (CB077) in front of the island.

Pure luxury

At the back of the bathroom there is a spacious walk-in shower in which two rain showers with a wall arm have been secured to the Taj Mahal quartzite rear wall. Extra-large (Ø 30 cm) overhead showers and a single shower bar with a hand shower have been chosen. 'The occupants wanted to be able to operate the rain showers simultaneously with and separately to the hand shower. Meaning we had to ensure that the buttons were logically positioned whilst being unobtrusive.' Next to the walk-in shower is an inconspicuous door leading into the toilet. Here too brushed brass accessories such as a toilet roll holder were chosen. The occupants are over the moon with the result. 'What do they think of the bathroom? They've said it's their dream bathroom. That's a tremendous compliment and we're hugely proud of this project.'

Last but not least, there is a small children's bathroom on the second floor. Here the interior architect went for a built-in shower set and separate shower bar with a hand shower. Again in brushed brass. The fact that the taps have a protective PVD coating means they will not lose their beautiful golden colour. There are built-in taps over the washbasin. 'The washbasin isn't that big, so it's more practical to have the taps coming out of the wall. And it looks great too!' ■

Designer tap with a robust look.

An industrial model in the popular

Cobber tap collection.

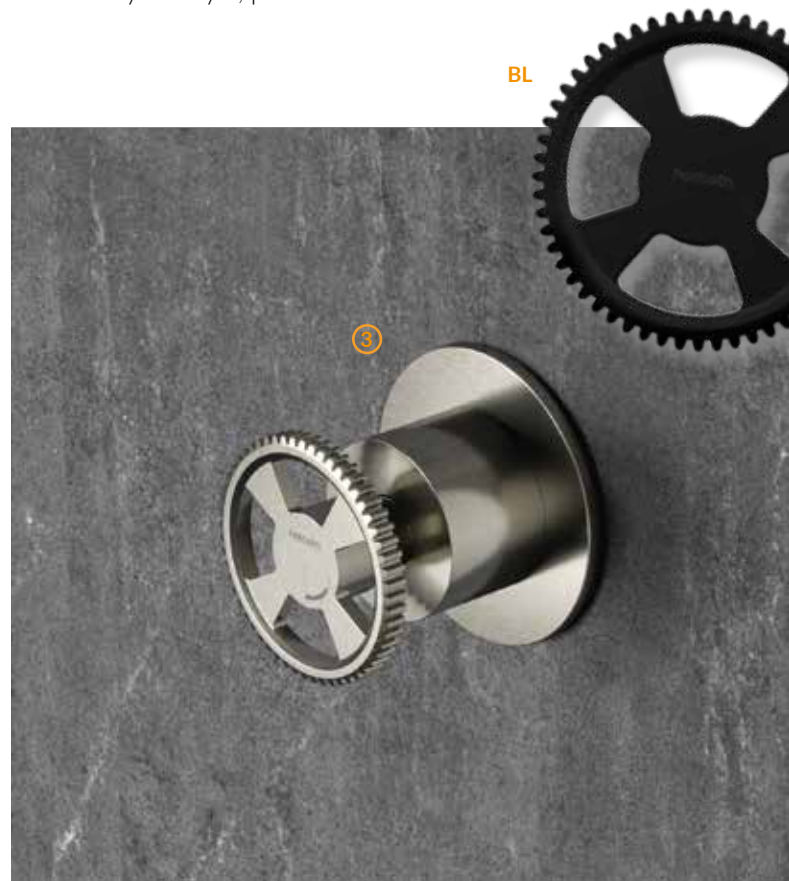

Cobber @Work in four finishes

Cobber @Work is an excellent choice for anyone looking for something really special for the bathroom. The tap is available as a built-in washbasin mixer, built-in shower thermostat and bath combination. The finish makes the tap extra-special. Choose chrome, for example, and let Cobber @Work shine in your home. Not quite striking enough? A matt black tap is trendy and will set the tone in the bathroom. The brushed brass PVD model has the appearance of gold and a robust brushed finish. The PVD coating makes the tap even more robust and scratch-resistant and lends it the perfect sheen. Brushed nickel is a beautiful matt finish with a warm glow. In short, at Hotbath you can choose the tap that fits your style, personal wishes and situation.

Cobber @Work has a gearwheel as a handle, making the tap a truly eye-catching feature. Its robust looks make the tap really stand out in an industrial or modern setting. We associate gearwheels with movement, speed and changing direction. An indispensable part enabling you to set something in motion. Here: water! Turn the gearwheel and the water starts flowing. This special edition Cobber comes in four finishes: chrome, brushed nickel, matt black and brushed brass PVD.

Designer tap at its best

Cobber @Work is unrivalled!

Characteristics of this unique collection include:

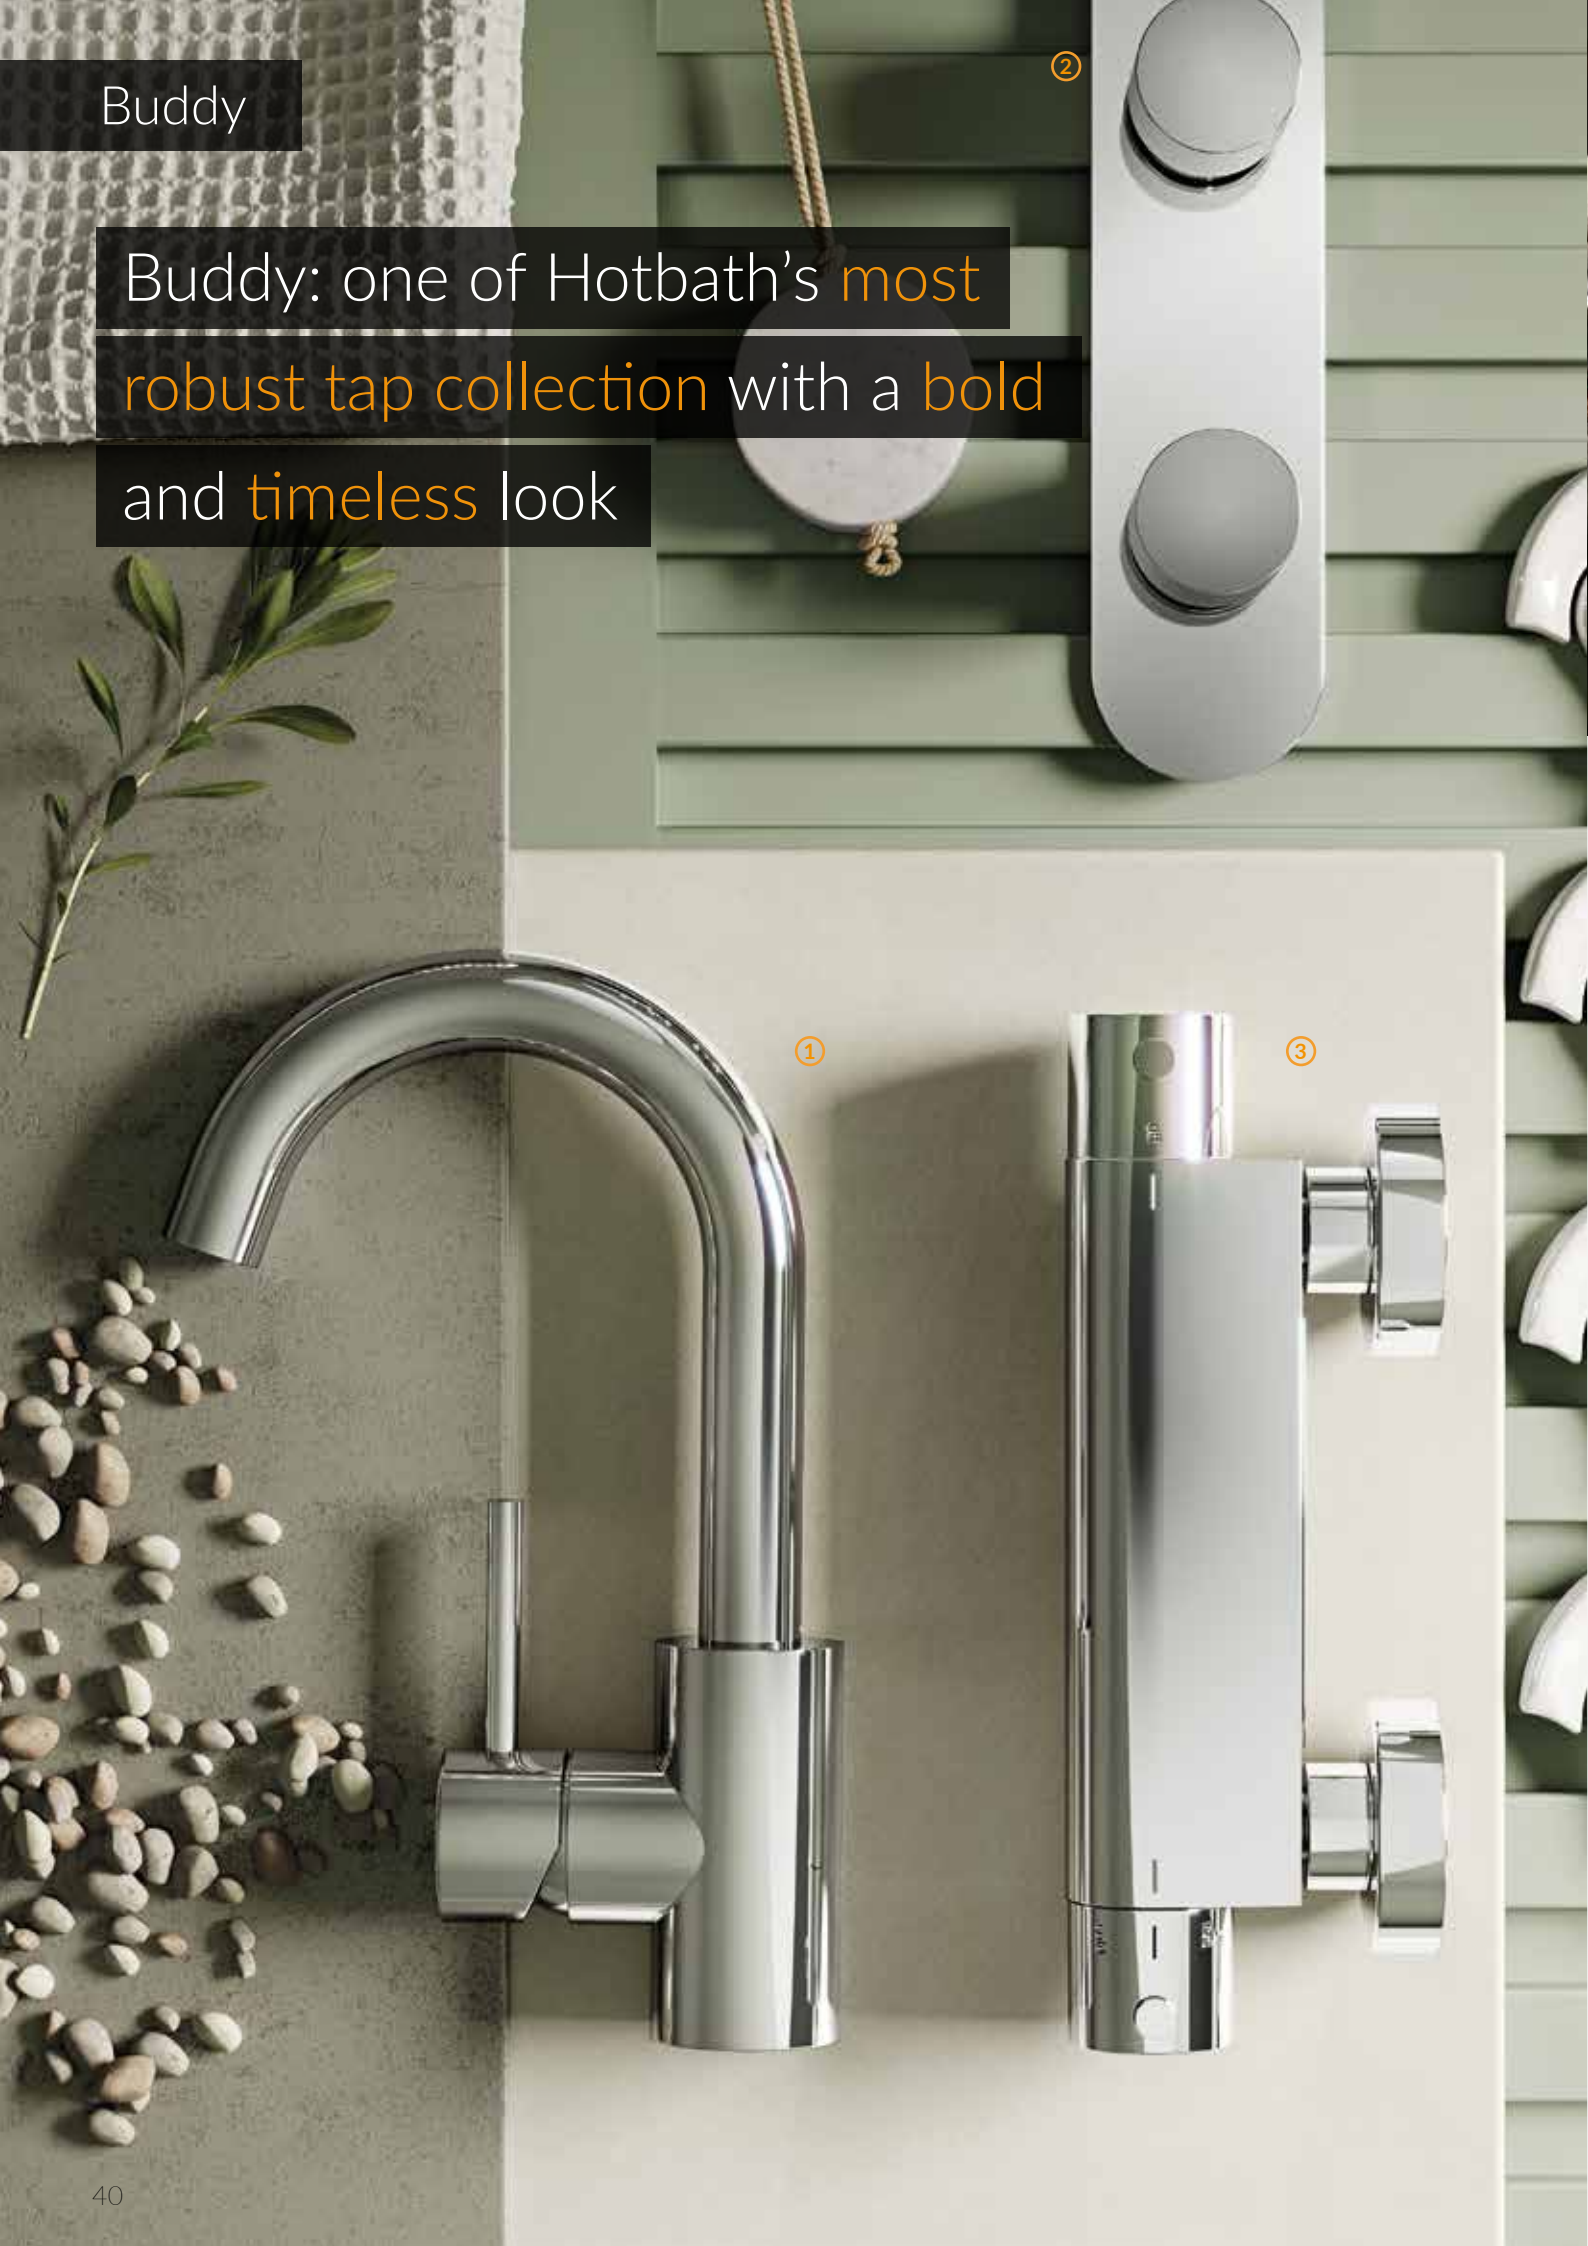

- Gearwheel handle
- Available in four finishes
- 10-year warranty on the inner workings from Flühs
- No hot water wasted thanks to the Cold Start

① Built-in washbasin mixer CW005T ② Built-in bath thermostat with spout CW7072 ③ Built-in 2-way diverter CW011

Buddy

Buddy: one of Hotbath's **most**
robust tap collection with a **bold**
and **timeless** look

A tap you can rely on – the **Buddy** collection consists of various models in chrome or brushed nickel. Buddy is not only a fantastic addition to your home but also a sustainable choice. The Cold Start ensures the tap is economical with hot water. The tap dispenses cold water in the neutral position, in contrast to other single-handle taps, which dispense mixed water. Buddy will only supply mixed or hot water once the handle is turned. Thus ensuring no hot water is wasted!

The perfect complement to your bathroom

Our Laddy, Cobber and Buddy were all developed on the basis of the same concept, being top-quality, sustainable taps that are easy to install. The differences between the taps are subtle, yet they all have their own unique character. Buddy is the most robust version out of the three, with a spout 26 mm in diameter, in contrast to Cobber (ø 20 mm) and Laddy (ø 18 mm). This makes Buddy the ideal addition to an industrial or rustic bathroom, such as the washbasin with rotatable spout. Which tap will suit your bathroom best?

! **Get inspired by this impressive collection of taps at one of our dealerships! Find your nearest dealership at hotbath.uk/retailer.**

The benefits of a Buddy tap

Has this tap what your appetite? That is perfectly understandable! Buddy is a robust tap that cannot be ignored.

Unique characteristics include:

- Bold design
- Available in chrome and brushed nickel
- No hot water wasted thanks to the Cold Start
- Three different mounting options
- Plumber-friendly: easy to install
- 10-year warranty on the inner workings from Flühs

① Surface-mounted washbasin mixer B004 ② Built-in shower thermostat B066 ③ Thermostatic shower mixer B008 ④ Bath rim combination B073 ⑤ Thermostatic bath mixer B017 ⑥ Built-in bath thermostat B061 ⑦ Built-in washbasin mixer B006J

'In our new house we've gone for Hotbath again' – Kelly

Panningen, Limburg

Who Jarno (33, sales), Kelly (29, nursing specialist) and daughter June (2 months)

Property type Detached former farmhouse built in 1949 and spanning 162 m² **Fun fact** The bathroom was finished three weeks before Kelly gave birth. That was pretty exciting!

Instagram @diyzelen

Finishing touch to the new home spa

Kelly and Jarno's former farmhouse is over seventy years old, but their bathroom is still brand new. This was one of the first rooms in the house to be completed after extensive renovation work. Finished in chrome, the Buddy tap is the finishing touch to their new home spa.

Kelly and Jarno detached former farmhouse is nestled among the cornfields in the vicinity of the town of Panningen in Limburg. They have been living there for nearly a year now and are still heavily engaged in renovating. Kelly: 'We were looking for a doer-upper that we could make our own. And that's precisely what we got, as we absolutely gutted the place. The top floor is pretty much done now. I gave birth to our daughter June three weeks after the bathroom was complete. It's fair to say we had a tight deadline!'

An extra room

The original bathroom was on the ground floor and there was just a toilet on the first floor. Kelly and Jarno decided to sacrifice one bedroom and the upstairs toilet to allow them to put in a new

Identify products using numbers in this photo

bathroom. 'Now we have an extra-spacious bathroom. We chose to conceal all the taps in the wall. We didn't have any space for built-in taps in our previous property and had one surface-mounted washbasin mixer. A really lovely one: Hotbath's Buddy. It was so nice that we went for Hotbath again. For the new bathroom we were keen on getting a double washbasin with two taps.

The couple chose the same tap as they had in their previous house, albeit a different model: built-in washbasin mixer Buddy (B005J) in chrome with a curved spout. The 3+3 system makes it possible to fit the taps in three ways. 'We're both right-handed, so we chose to have the handles on the right. It's practical and looks great too. We did consider black taps too, but in the end went for chrome. They

seemed a bit more low-maintenance.'

'Twice the joy with two washbasin mixers'

The luxury of a large showerhead

In their previous house Kelly and Jarno had a walk-in shower containing a Hotbath rain shower. A luxury they were keen to have again. 'We had to put our thinking caps on because the bathroom has a sloped roof and we also wanted to put in a freestanding bath and a toilet. In the end we managed to create a relatively deep walk-in shower and we spoiled ourselves with a thermostatic Buddy shower set with the biggest showerhead. It's a bit more luxurious and works well in our

slightly more spacious walk-in shower. We didn't use the hand shower in our previous house very often but now it's indispensable. We use it on a regular basis to give June a bath.'

Eye-catcher

As one of Kelly's priorities, they got the freestanding bath too. With a freestanding floor-mounted bath mixer next to the bath. 'I love a freestanding bath and June will have a great time playing in it in due course. And I reckon if you're going to go for a freestanding bath then a freestanding tap is the perfect addition! ▀

Mate

①

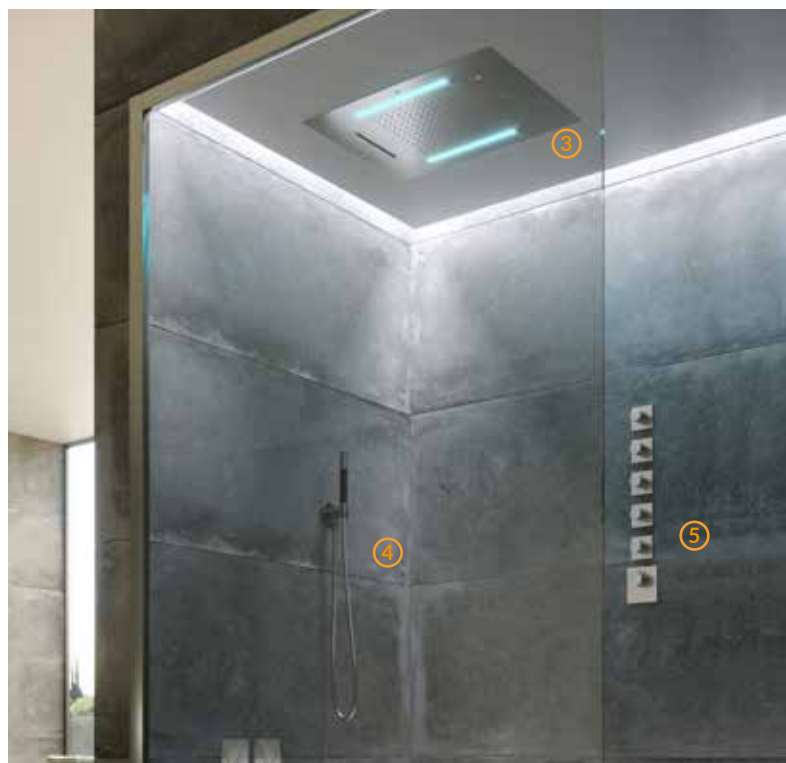

Keen to create the ultimate
wellness experience in your bathroom?
Choose from our 117 comfort options!

Keen to create a home spa atmosphere in your bathroom? Choose the **Mate** collection, which puts maximum enjoyment centre stage. The sleekly designed overhead and hand showers will lend any bathroom a luxurious look. The options presented by this collection are endless and include a cascade spout, or a relaxing waterfall for your bathroom. Or opt for massaging body jets and a soothing mist function. Some of the models even enable you to enjoy your favourite music in the shower thanks to four built-in Bluetooth speakers. Our Mate provides without a doubt ultimate comfort and total relaxation in our hectic lives.

Indulgence in the bathroom

Mate will ensure you can fully unwind in the bathroom. You can choose from round or square built-in overhead showers incorporated into the ceiling as well as a surface-mounted overhead shower with wall arm or ceiling tube. Several of the overhead showers also come with LED lighting, allowing you to choose from no fewer than nine colours. Red LED lighting will give you an energy boost, for instance, and a green hue will help you to relax. Last but not least, the taps are a sustainable choice. The overhead showers consume less water than regular rain showers, without any sacrifices having to be made in terms of comfort.

Interested in finding out whether your boiler has enough capacity for one of these fantastic rain showers? Ask your sanitary facilities advisor about the options.

Maximum enjoyment with Mate

The overhead and hand showers from the Mate collection ensure a true experience. Benefits of this collection include:

- Available in variety of finishes
- Optional LED lighting, Bluetooth speakers, body jets and cascade function
- Possibility of combining multiple functions thanks to High Flow thermostats
- Sustainable: the EcoAir System means these overhead showers are economical with water
- 10-year warranty on the inner workings from Flühs

① Built-in shower set IBS25 ② Overhead shower M111 ③ Built-in overhead shower M190 ④ Hand shower set M440 ⑤ High Flow thermostat MHRQ5 ⑥ Overhead shower M385 ⑦ Cascade M160 ⑧ Hand shower M350

The unique characteristics of our finishes.

Hotbath products are produced in many finishes, each with its own unique characteristics. You can choose from 16 finishes:

316 stainless steel (IX)

Taps in 316 stainless steel present a wide array of benefits. 316 stainless steel is of the very highest standard of quality, exceptionally resistant to moisture, dirt and high temperatures. This makes the taps perfect for use in humid rooms like bathrooms. What's more, these taps are sustainable and low-maintenance, meaning that they will last a long time and still look new. The control buttons have a Vinyl Touch finish and the same sparkle as a gramophone record. This gives the taps that extra touch, making them outshine the competition.

316 STAINLESS STEEL

Chrome (CR)

A chrome tap has an elegant, refined look. The finish has a sublime sheen and ensures striking, vibrant detailing in the bathroom, kitchen and toilet. Chrome combines well with other materials and ensures thrilling contrasts. The colour's timeless character makes it go well in pretty much any interior style and it is well known for its tough character. You can also rest assured that it will retain its unique appearance even after many years have passed.

PLATED

Brushed nickel (GN)

Brushed nickel has its own subtle, warm glow. The brushed finish is done by hand, lending the tap an authentic artisanal look. This finish will stand out in both a minimalistic setting and a room with lavish detailing. Choosing brushed nickel means choosing a versatile tap with a luxurious appearance which will adapt to its environment like a chameleon.

PLATED

Matt black (BL)

Sum up matt black in three words? Stylish, luxurious and trendy. This popular finish is used both in minimal designs and in bathrooms and kitchens with a trendy design. One thing is certain: matt black taps set the tone and give a bathroom or kitchen the look of a chic boutique hotel or Michelin-starred restaurant. With matt black you will be making a statement and giving your interior a real boost.

VARNISHED

Matt white (WH)

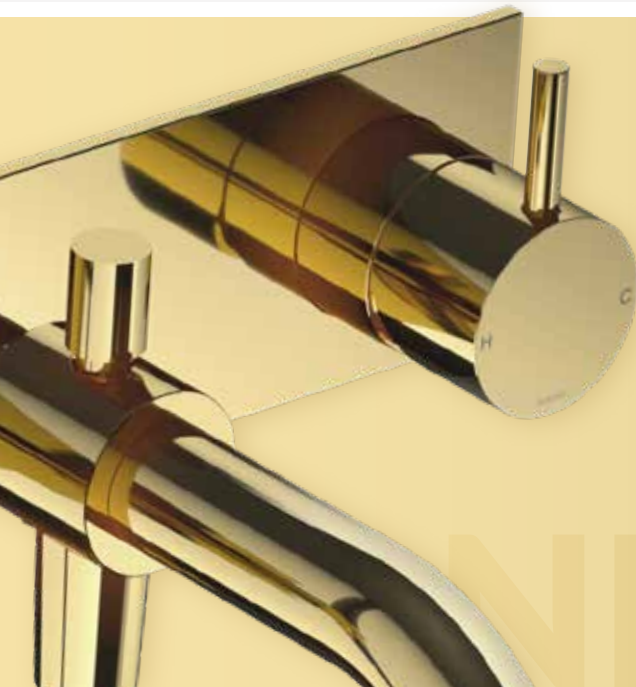

The matt white finish is defined by simplicity, beauty and serenity; in which all the elements are in harmony with one another. Matt white adds a fresh touch to a room. The taps and fittings form part of a bathroom or kitchen design and yet at the same time will stand out due to their matt look. A unique finish neatly pairing simplicity and pure perfection. Also perfectly fits a Nordic interior.

VARNISHED

All Hotbath **Cobber Living Colours** are finished without surface protection, ensuring a beautiful, vibrant result.

Check out our website and find out more about Hotbath's Living Colours!

Natural brass (NB)

Natural brass has the capacity to grow old gracefully whilst preserving its qualities. It is a pure finish of natural brass without surface protection and naturally changes colour due to external influences. The finish starts out gold in appearance with an alluring sheen, creating a unique look and feel to a bathroom and kitchen. The brass develops its distinctive patina over time.

LIVING COLOUR

Brushed brass (BB)

Brushed brass is a finish with a touch of gold. The brushed finish is done by hand, lending the tap an authentic artisanal look. The finish naturally changes colour, producing a beautiful, vibrant result. Brushed brass has a luxurious yet understated look.

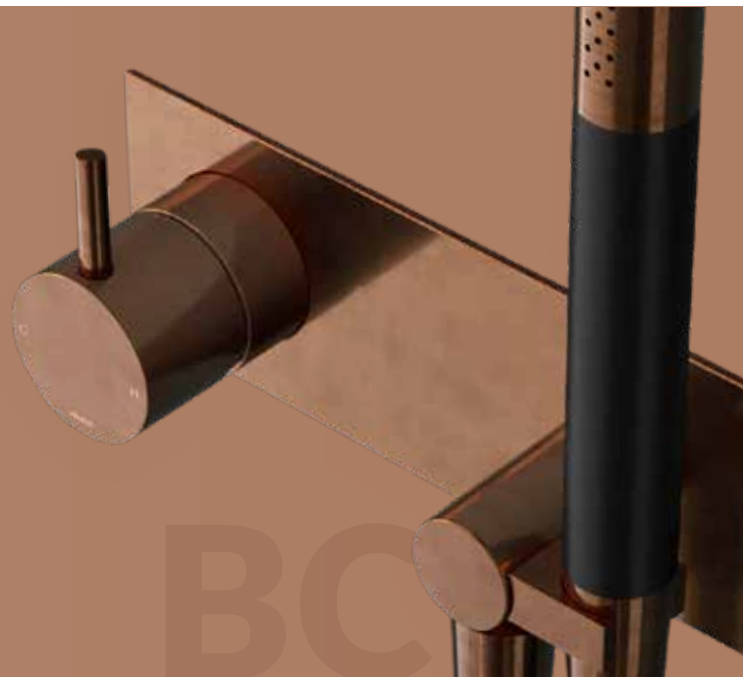

LIVING COLOUR

Brushed copper (BC)

The brushed copper finish is an architectural highlight due to its subtle sheen and warm tones. The finish gradually changes appearance under the influence of air and physical contact, which causes the material to develop a unique patina. Thus giving rise to a tap with a weathered look, which only improves in its beauty the more it is used. Kitchen taps, bathroom taps, fittings and shower sets in brushed copper are the finishing touches for any room.

LIVING COLOUR

Aged brass (AB)

Aged brass is in a class of its own. The finish naturally has an aged look due to the processing method for the material. The ageing only adds to this colour's allure and gives the tap a stunning appearance. Water, air and physical contact have a positive effect on the material, making it increasingly beautiful over time.

NB This finish features an industrially applied, irreversible, aged patina that cannot be scrubbed off.

LIVING COLOUR

Patina, unique from the very first touch

The tap will come alive right from the moment you touch it. It will gradually develop a beautiful, distinctive patina which makes Hotbath's Cobber Living Colours personal and above all unique.

What is a patina?

A patina forms because the metal has been finished without surface protection. The upshot of this is that the tap can naturally change colour and sheen. Hence the finish will sometimes become lighter or even slightly darker and the material will 'come alive'. It will develop little blemishes that lend the tap a unique character.

Hotbath finishes

with a powerful PVD coating

Our unique PVD coating makes the taps even stronger and more scratch-resistant. In total, there are five different finishes available with a PVD coating. From brushed brass PVD to the ruggedness of brushed gunmetal PVD. For all styles, a matching PVD finish with an impressive 10-year warranty.

Brushed brass PVD (BBP)

Fallen in love with the matt appearance of brushed brass? Then go for the BBP (brushed brass PVD) finish. The coating will ensure that a tap with this finish still looks new after many years of use. It is a sustainable choice and a material that is not prone to corrosion, oxidation and scratches. In short, it is a finish that is unrivalled when it comes to withstanding the ravages of time and retaining its beauty.

PVD

Brushed copper PVD (BCP)

The brushed copper PVD is a vibrant tap with a weathered appearance and a unique warm tone. The PVD coating lends the tap an aged look that will be retained even after many years. This differs from brushed copper without PVD, which is a finish that will naturally change colour. Brushed copper PVD is a robust finish which is resistant to scratches, tarnishing, wear and tear, corrosion and discolouration. It is a great choice for rooms bursting with atmosphere, luxury and design.

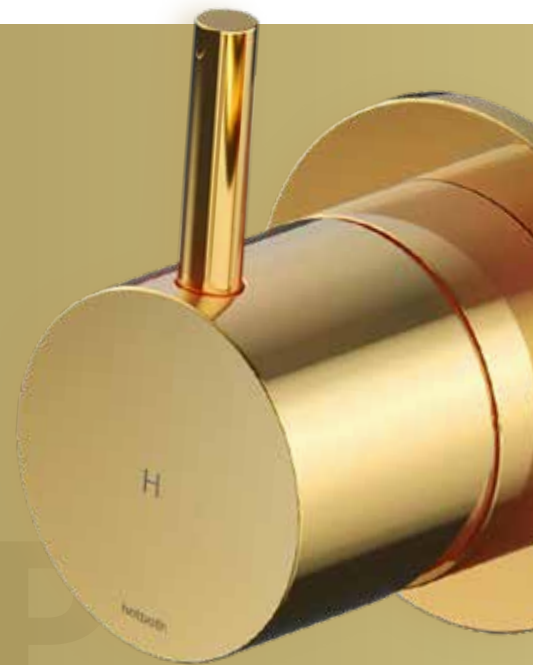

PVD

Natural Brass PVD (NBP)

Natural Brass PVD stands out from other finishes due to its perfect sheen, excellent scratch-resistance and sustainable character. It is a robust finish that is even more resistant to cleaning products, wear and tear and limescale. The finish will not taint and will keep its original appearance. The tap's unique sheen and touch of gold will be retained even after many years of intensive use.

PVD

Brushed gunmetal PVD (BGP)

Give your bathroom a bold look with taps in brushed gunmetal PVD. Brushed gunmetal PVD stands out from other finishes due to its timeless, rugged appearance and personality. The PVD coating lends the tap excellent scratch-resistance and a sustainable character. Even after many years you will still be able to enjoy. You will still be able to enjoy this bold finish even after many years of intensive use.

PVD

Brushed nickel PVD (GNP)

Brushed Nickel PVD is one of the newest finishes to be added to Hotbath's range. It looks like stainless steel and has a subtle, warm glow to it. The brushed finish is applied by hand, lending the tap an artisanal appearance. The special PVD finish inhibits and eliminates bacterial growth on the surface onto which it is applied. It is a sustainable choice and a material that is not prone to metal corrosion, oxidation and scratches. So you can rest assured that this finish will retain its artisanal appearance for many years to come!

PVD

PVD stands for

Physical Vapour Deposition

PVD stands for Physical Vapour Deposition, which is an advanced surface treatment technology for taps. This technology is used to apply a sustainable, decorative coating to the surface. Resulting in a premium aesthetic and improved quality.

PVD coating process:

The PVD coating process uses a vacuum environment in a special coating chamber. In this environment, an electrical discharge or other heat source is used to vaporise metal (such as chrome, nickel, titanium, zinc or other alloys), producing a metal-containing vapour.

The atoms of metal thereby released condense and are deposited on the tap's surface, forming a thin, uniform layer. Strict temperature and pressure controls are used to manage this process, ensuring a consistent coating that will adhere nicely.

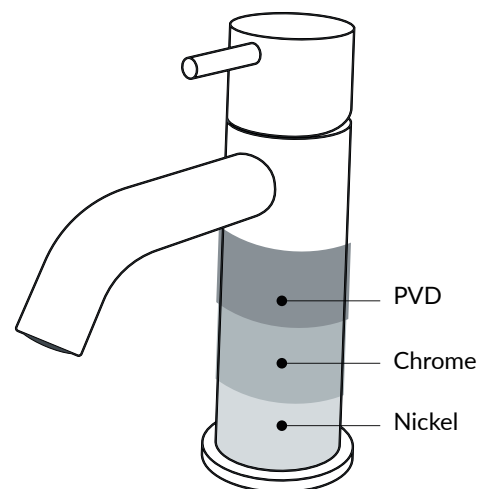

Benefits of PVD coating on taps:

Sustainability: PVD coating provides an exceedingly durable layer that is not prone to scratches, corrosion and discolouration, ensuring the tap will continue to look like new.

Aesthetic: PVD coating is available in a variety of colours and finishes, increasing the design options and lending taps a premium appearance.

Ease of maintenance: The smooth, nonporous PVD coating makes cleaning straightforward because it won't be able to attach to it inhibits dirt and limescale build-up on the surface.

Environmental friendliness: PVD coating is more environmentally friendly than some other coatings as it is a physical process that does not involve harmful solvents or emit harmful substances.

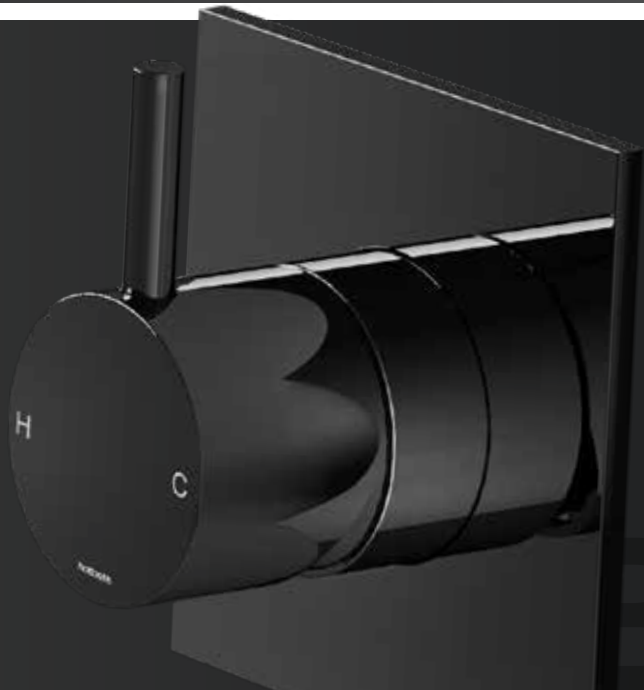

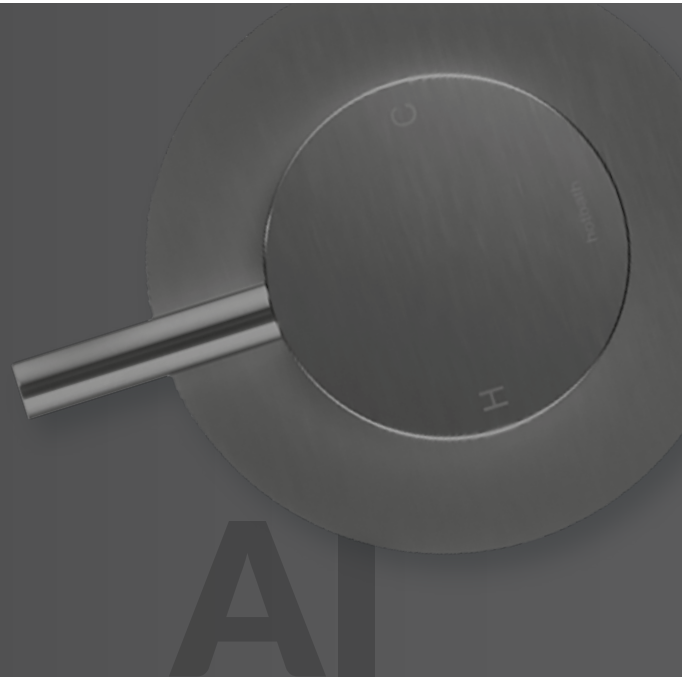

! Scan the QR code and read more on
• our extensive range of colours!

Aged iron (AI)

Aged iron will create an understated, modern atmosphere in your interior. The finish is an aesthetically responsible choice, emphasising the pure form of a tap. Aged iron has a matt look but shines in terms of its simplicity and finesse. Its warm appearance will make the tap a boon in any designer bathroom or open kitchen where enjoyment and relaxation are the focus.

COLOUR-PLATED

Black chrome (BK)

One option among the darker finishes is black chrome: a daring colour that suits both modern and classic bathrooms and kitchens. Unlike a matt black finish, black chrome has an alluring sheen to it. All eyes will be on this finish. Whether you are looking to create atmosphere or are keen to emphasise the beautiful form of a tap, this stunning finish will add a new dynamism to your room!

COLOUR-PLATED

6 bath taps that will steal the show in your bathroom

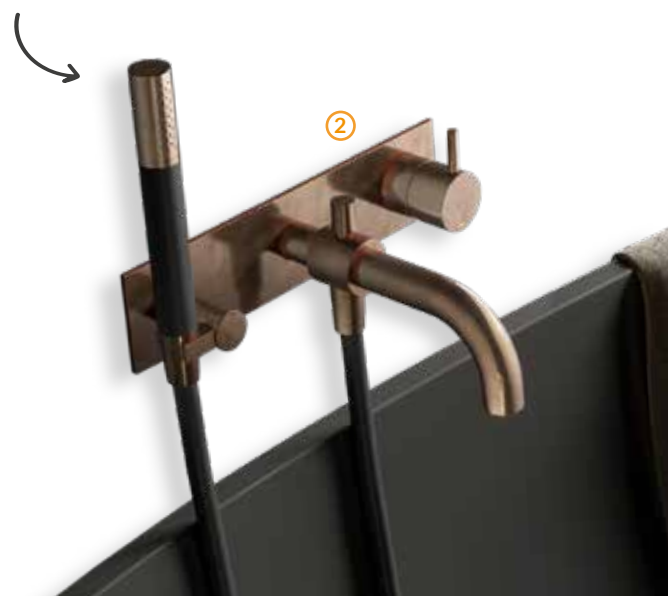

A beautiful bath tap is all part of the enjoyment of having a bath in your bathroom. Choose a tap that fits your bathroom style and wishes. You could consider a freestanding bath mixer or a bath tap with a waterfall, for example. Whatever type of bath you have, we have the perfect tap for you. Here are some of the finest bath taps!

Tap for a freestanding bath

One of the trends when it comes to baths is a freestanding bath. Beautiful in a bedroom, an en-suite bathroom or a large bathroom. A freestanding bath mixer is a great way of emphasising the freestanding nature of the bath. The bath tap is floor-mounted and can be sited anywhere around the bath. This tap is available in no fewer than thirteen colours and makes a great addition to your bathroom. It also features a hand shower, which is indispensable for rinsing the bath clean.

Corner bath? This bath tap is ideal

Installing a bath in your new bathroom is often a matter of fitting and measuring. Situating it in a corner makes the most efficient use of space. Looking for a bath tap for a corner bath? A built-in tap takes up very little space and will look sleek. You might wish to go for bath mixer ② *Cobber CB026*, for instance. Pressing in or pulling out the middle button switches it between hand shower and bath filler mode. This bath mixer does not feature a thermostatic valve, enabling you to adjust the water temperature to your liking yourself. Just as you would with a kitchen mixer!

Bath tap for a traditional tub

What is your favourite way of taking a bath? An oval bath will have you sitting a bit more upright than traditional tubs in which you can enjoy stretching out and submerging yourself. With a traditional tub against a wall you will need a tap that comes out of the wall or is fitted on the rim of your bath. You might wish to go for a thermostatic bath mixer ④ (*Cobber B020*), for instance. It is not uncommon for people to bump into their bath tap, but that is unlikely to happen with this model. You can turn the tap to the side, you see. Or why not choose a thermostatic bath mixer with a cascade spout ③ (*Cobber B021*). Yes, that's right: a bath tap with a waterfall. What luxury!

Tap for a built-in bath

A built-in bath is usually installed against two or three walls and finished with a surround. It looks snug, is easy to clean and no water can end up behind the tub. Combine your built-in bath with a built-in bath thermostat with two shut-off valves (*Cobber CB7072*).

The shut-off valves allow you to use the hand shower and the bath spout at the same time. Which is pretty useful if you are keen to wash your hair whilst the bath is filling. This bath tap features a thermostatic valve, giving you the desired temperature immediately without any water wasted, but with a limiter to prevent the water from ever exceeding 38-40 degrees. Hence children will not be able to just turn the hot tap on. Safety first!

Tap for your hot tub

A wellness bath, spa tub or hot tub is the ultimate among baths. Magically transforming your bathroom into a home spa in which you can kick back and relax. With a spa bath you can enjoy massaging jets of water or air. There are multiple little holes in the bottom of the bath through which water, air or infrared rays pass. A bath as wonderful as that calls for a luxury tap, such as a bath rim combination ⑤ (*Archie AR073*) with a mixer, a bath filler and a hand shower. This tap also combines well with a built-in bath. Do make sure that the rim of your bath is wide enough, however.

Tapless bath? No problem!

Some people would rather keep the tap spout out of sight. One option is a bath overflow filling combination (*Pal P033*). The overflow is the button commonly found on the bath's interior. You use the overflow to control the plug, fill the bath and get rid of excess water. What's more, the bath gets filled silently without the noise of water splashing into the tub. It is not only practical but also lends your bath a sleek appearance. You might wish to have a hand shower tucked away in an alcove, which will prove useful if you want to wash your hair or rinse the bath clean.

- ① Freestanding bath mixer CB077 ② Built-in shower/bath mixer CB026
③ Thermostatic bath mixer with cascade spout B021 ④ Thermostatic bath mixer with rotatable diverter spout B020 ⑤ Bath rim combination AR073 ⑥ Built-in bath thermostat with 2 shut-off valves with spout GL7072

Exceptional ease of use thanks to Flühs inner workings

People tend to judge taps largely on their appearance, but the inner workings are no less important.

Exceptional ease of use

It is not something you are likely to think about, but when you turn the handle of a tap a ceramic disc in the tap will slide over another disc with the utmost precision. The discs hold back the water or allow it to pass through. How easy a tap is to use depends on the quality of these discs. The premium quality of the inner workings in all Hotbath taps ensures that the handles open and close smoothly, the flow of water is easily controlled and the taps are built to last for many years.

The secret? Powered by Flühs

All our productions come with high-quality, patented inner workings from German company Flühs Drehtechnik. The world's largest, most innovative company in the field of inner workings and turning technology in the tap industry.

Configuring your ideal shower set

is easy with Get Together!

The name of the collection says it all: 'Get Together'. This collection merges Hotbath products to form fantastic sets. Prefer a shower bar, a different hand shower or a larger overhead shower? The combinations are endless, as each and every set can be tailored entirely to your wishes. Indulge yourself with our 'Get Together' collection and choose from a variety of modern, luxurious options.

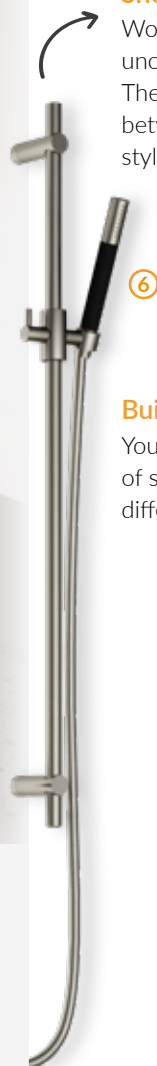

Wall arm or ceiling tube?

Will you choose a wall arm or will you go for a ceiling tube? Even the size of the overhead shower can be tailored entirely to your own taste.

Shower bar or wall support?

Would you like a shower bar or would you prefer an unobtrusive wall support? Anything is possible at Hotbath! The hand shower is interchangeable too. There is a choice between a 3-position hand shower or the standard wand-style hand shower.

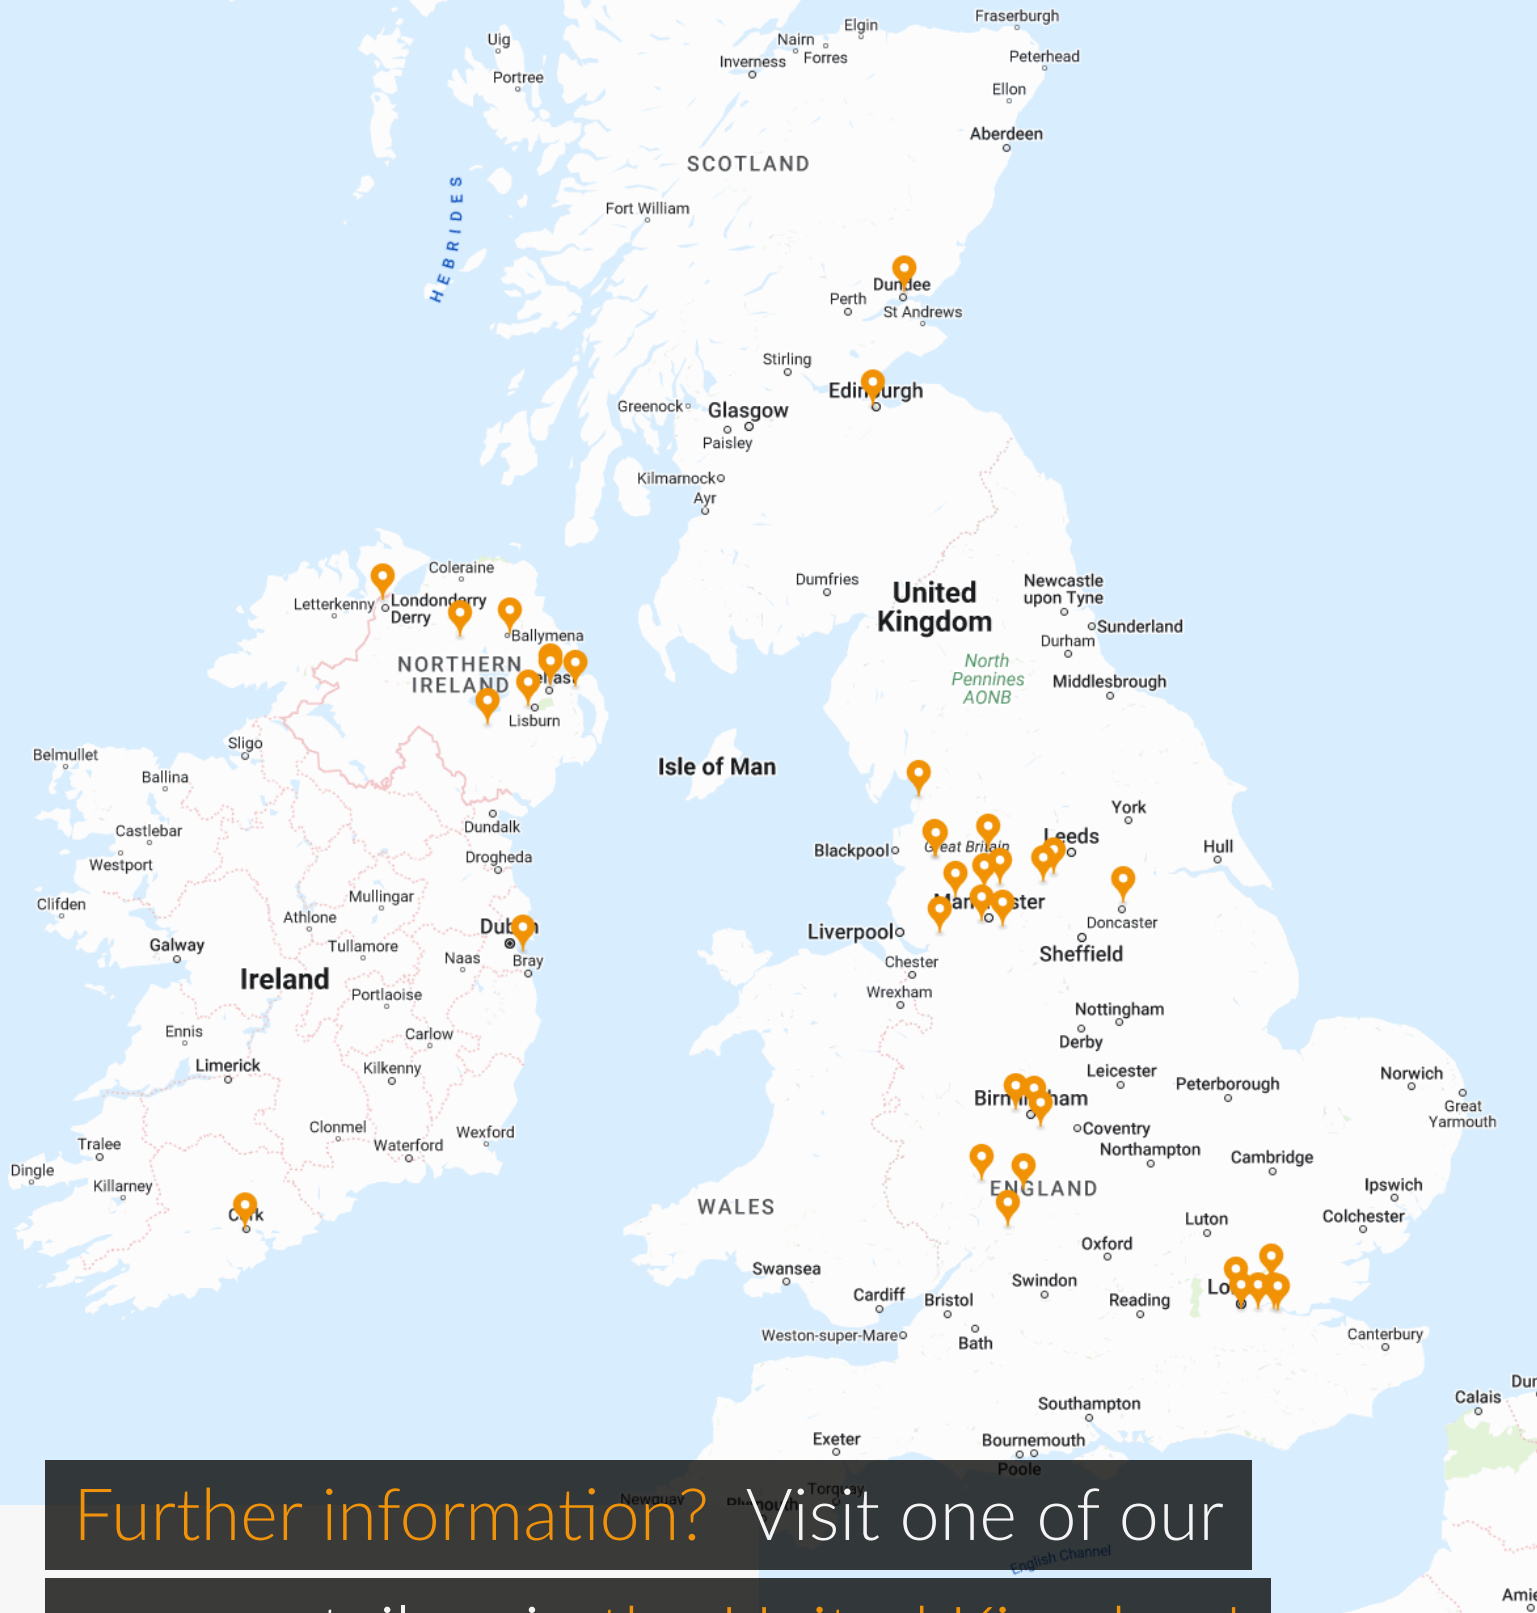

Built-in thermostat options

Your choice of built-in thermostat will determine the type of shower set. We offer a selection of no fewer than 38 different built-in thermostats.

- ① Ceiling tube M452 ② Overhead shower 30 cm M106 ③ Wall arm M450
④ Overhead shower 20 cm M100 ⑤ Complete thermostatic shower Built-in Set IBS1 ⑥ Shower bar set M307 ⑦ Built-in shower thermostat with 2 shut-off valves CW7067 ⑧ Built-in thermostat with 2-way stop diverter L009 ⑨ Built-in thermostat with 2-way stop diverter B009
