

**ARE YOU
DOING
SERIOUS
BUSINESS
WITH
HEATING
SYSTEMS?**

MANTA[®] ecologica
Water Treatment for Heating Systems

THE SCENARIO OF WATER TREATEMENT

01

European directives ask us all to **improve our systems efficiency to reduce CO₂ emissions** to reduce global warming.

ec.europa.eu/energy/en/topics/energy-efficiency/energy-efficiency-directive

02

Boiler/Heat Pumps producers are **pushing to treat the circulating water** to protect their products.

03

End user real problems are increasing due to more sophistication of heating solution.

an increasing
necessity from
all sides

In this scenario, PowerFlushing is often seen as a “only a complement» by installers and distributors ...BUT

- **How many installations and washings are made today, in a hurry or in economy?**
- **How many missed business opportunities are you ignoring by** following the competitors in proposing low end solutions.
- **How many occasions do you have to propose innovative solutions** that will let you emerge from the competition?

Bottom line is:

Powerflushing can only grow due to the ongoing technological change in heat generators (boilers, heat pumps, underfloor heating systems that require greater attention, etc...).

Have you ever thought about seriously increasing your business in this area?

Furthermore:

Do Your Customers often have these problems?

They face a dirty system where **cleaning is the only option**

They hesitate to clean it, **fearing it might cause further damage** to an already deteriorating system

They **fall into common mistakes** (like cleaning with just water or using inadequate tools or chemicals)

...Very often we hear from professionals who are either afraid to perform system cleanings or struggle to make it a profitable part of their business.

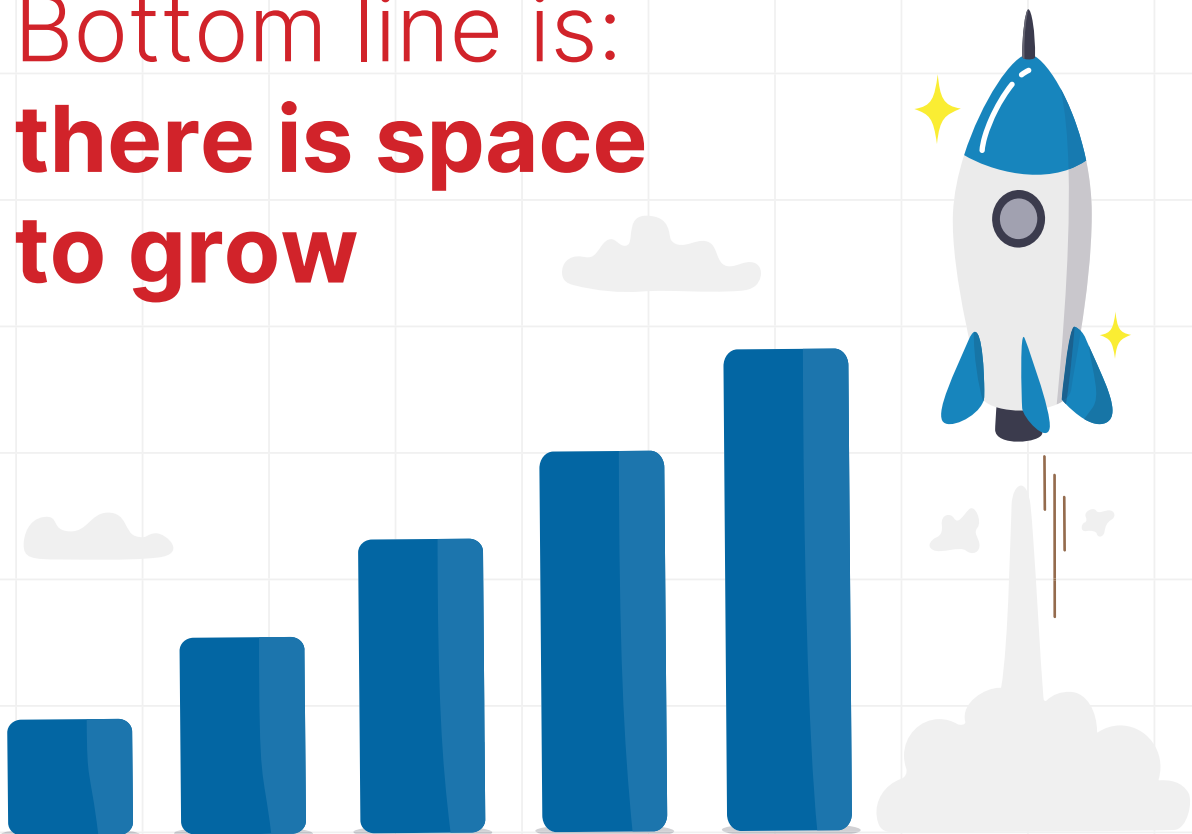

Is it really in your best interest to...

- **Let your installers choose products** from your competitors?
- **Only supply your customers** with heating system materials?
- **Miss the opportunity to create a specialized** position in this market?

Bottom line is:
**there is space
to grow**

That's why at Manta we have developed a tailored approach for distributors...

PRIVATE CONSULTING

Tailored and one to one support

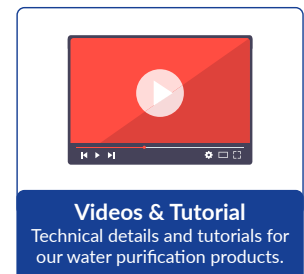

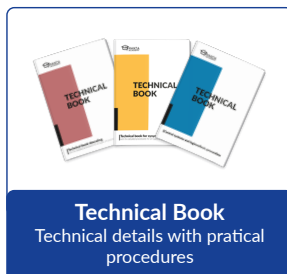

ACADEMY INTERNATIONAL

online workshop

A SERIES OF EVERYDAY'S TOOLS

Updated Info:

Academy Online / Manta H.Q.
www.mantaecologica.com/en/manta-academy-international

Unique range of products

SquEasy

COMPLETE RANGE IN 'POCKET' FORMAT FOR ALL COMMON USES:

high and low temperature system protection, system cleaning with and without pump.

- Easy plug-in:
The chemical can be introduced wherever you want (radiator, vertical wall radiator, sludge remover filter or manifold).
- With patented universal adapter cap.
- No need adapters or external accessories
- Very simple to use

HYPERFLUSH 36

POWER FLUSHING PUMP

Designed for the washing of domestic systems equipped with a flow inverter, a hydraulic system complete with valves, tap and overflow.

- Unscrewable motor flange in 10" and no tools
- Flow inverter
- Dry running will not damage the pump
- Works up to 70 ° C
- Recovers optimal heat exchange
- Reduces energy consumption

TRANSFORMER PFH 55 / PF 55

POWER FLUSHING PUMP

Pump suitable for restoring heating systems where higher pressures or high flow are required.

- Easy handling
- High pressure
- Specifically for washing of radiator systems
- Exclusive design
- Complies with EN 60335-2-41:2003 and EN 60335-1:2012

Manta Ecologica

all the experience of a designer & producer in one of the most challenging markets for Water Treatment

45

Years of production and technological development
from chemicals to the complete solutions for heating systems

1 Specialisation:
Production of equipment and chemicals for heating and air conditioning professionals

Over 1,500 technical assistance services,
installers and distributors served each year

2,954 professionals took the **Manta Academy**
courses in the last 3 years

11 boiler and equipment manufacturers:
the brands for which we have produced or are producing
