INTENSI 316 UNO

INTENSI 316 UNO shower tray was designed with the latest trends and market expectations in mind. Its very low build-up allows installation in difficult conditions. The shower tray is available in two variants with the possibility of cutting it to the required length, which makes it fit perfectly into the size of the shower tray. It is equipped with a SNAKE BEAN siphon. It receives water along its entire length. The standard length of the base is 300 mm, while the gutter and grate set is 1200 and 1500 mm long. The whole is made of certified steel grade 316 polished, ground or matte.

PVD (Physical Capour Deposition) is a process of physical deposition of thin layers from the gas phase, carried out under conditions of high vacuum. The coating formed in this process, is characterized by versatile properties. The most important of these are: excellent color quality and a wide range of colors, high abrasion and corrosion resistance, high thermal stability and chemical inertness.

INTENSI 316 DUO

INTENSI 316 DUO shower tray was designed with the latest trends and market expectations in mind. Its very low build-up allows installation in difficult conditions. The shower tray is available in two variants and can be cut to the desired length, which makes it perfectly adapted to the size of the shower tray. It is equipped with a new double siphon SNAKE BEAN. It collects water along its entire length. The standard length of the base is 300 mm, while the gutter and grate set is 1200 and 1500 mm long. The whole is made of certified steel grade 316 polished, ground or matte.

PVD (Physical Capour Deposition) is a process of physical deposition of thin layers from the gas phase, carried out under conditions of high vacuum. The resulting coating is characterized by versatile properties.

INVISIBLE

The INVISIBLE linear shower drains are the concept of a visually minimalist take on standard linear drains. When installed, its parts are perfectly invisible. The only visible feature are the drain slots in the floor to accept the water through. This solution is recommended for floorings made of materials which can be cut and trimmed to obtain an aesthetic finish (like vitrified tiles or granite stone). The product kit includes a degreasing wipe to clean the substrate before adhesive bonding.

VINYL FLOOR

VINYL FLOOR shower gutters are specially designed linear drainage for installation in floors, which are to be covered with PVC flooring. Vinyl flooring is constantly gaining in popularity and for years has been used primarily in medical and beauty salons, hospitals, but also in offices and increasingly also in homes.

This trend has necessitated the creation of a completely new drain with a special snap-on design, which will allow the safe installation of a linear drain in a bathroom with PVC flooring. Vinyl Floor is made of high quality steel and crafted with high attention to detail so as to provide discerning customers with a luxury product that will last for years.

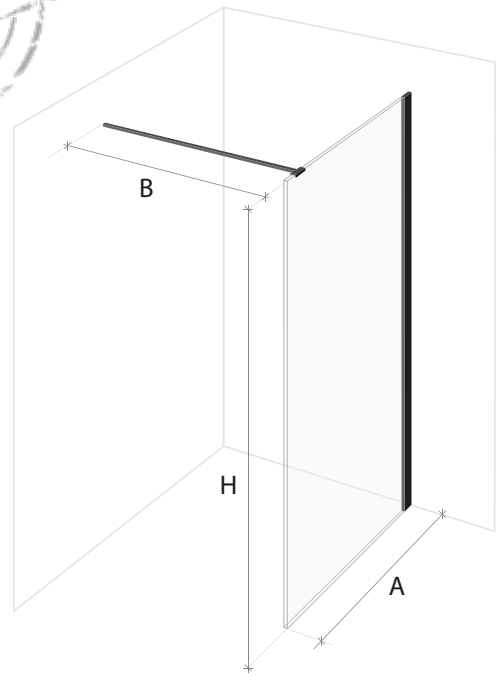
SHOWER SCREEN
VERRE

VERRE walk-in shower cabin comes in two color variants: VERRE BRIGHT timeless silver in gloss version and VERRE BLACK elegant modern black in matte version. The wall is made of 8 mm thick tempered glass with applied hybrid Active Shield coating protecting against dirt deposition and making it easier to keep clean. The wall mounting profile and stabilizing bracket with length adjustment up to 120 cm and angle adjustment of 180° make installation extremely easy and intuitive. The model of the cabins is universal and allows left and right installation.



Active Shield

Advantages:

– glass: 8 mm toughened clear glass with Active Shield coating
– transparent glass does not optically take up space in the wet room
– easy to assemble
– surface finish: polish
– stainless steel stabilizing bracket with adjustable length up to 120 cm and 180° angle
– the door-less system offers plenty of space when showering

SOLID EYE

NEW

A shower tray characterized by an elegant, modern design and a timeless form with an exclusive masking frame with an unprecedented innovative shape. Standard size is 1200 x 900 x thickness 30 mm. The surface has perfect/subtle slopes from and corner of the tray to the drain which provides effortless drainage. The Shower tray can be installed on an existing tiled surface or a screed with tiles layed up to the Shower tray.

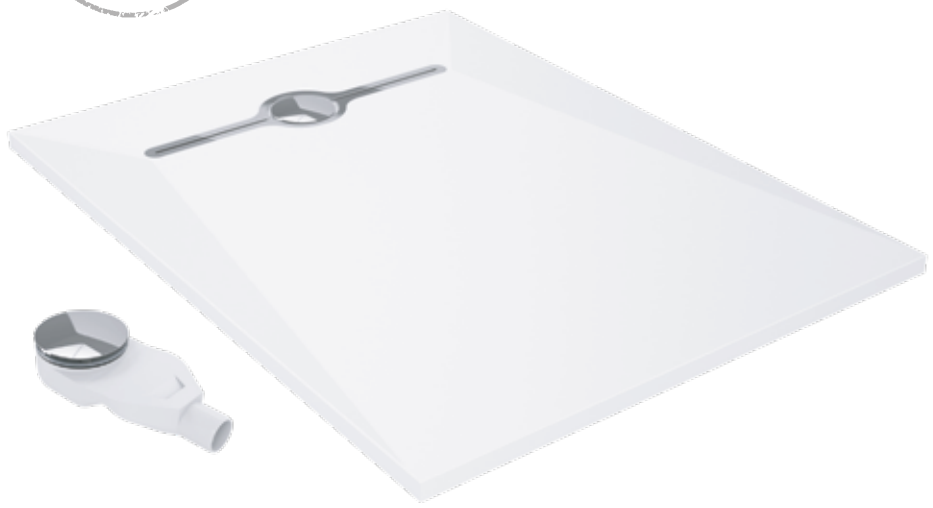
SOLID EYE

5 YEAR GUARANTEE



Set consist of:
1. Composite shower tray
2. Eye-cover, stainless steel, polished surface
3. BRIDGE 90 siphon , 100% polypropylene

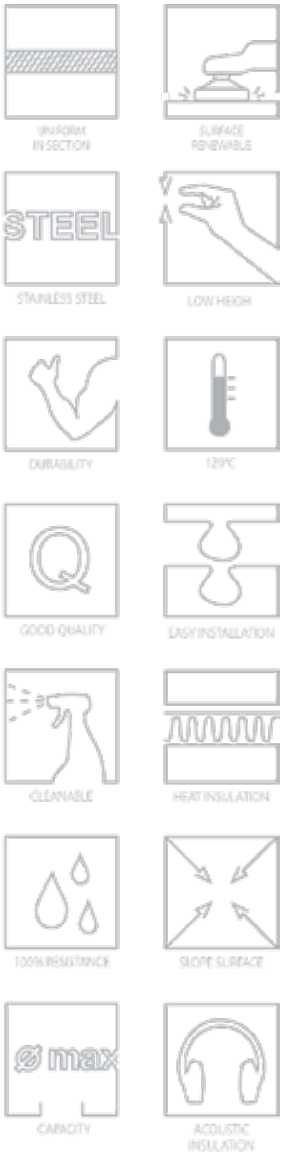
For this product you can buy:
• TANKING KIT s. 44

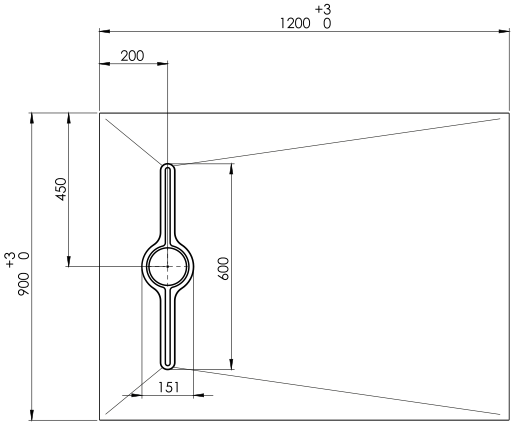
Solid Surface material

The shower tray is made of very durable Solid material Surface and is the latest generation of mineral-acrylic. It guarantees durability and high resistance to impact and abrasion. The shower tray area is easily renewable, Solid material in case of damage Surface allows for grinding and polishing, because it is uniform in cross-section and is characterized by its absence of pores. This composite material does not allow for the formation of fungi or bacterial growth and is resistant to the action of UV. Although it looks like it natural stone, unlike it, it gives very comfortable feeling of warmth.

Advantages:

- antibacterial properties
- easy to keep clean
- durable
- easy to renovate
- unchanging appearance over many years of use
- Eye cover - made of certified stainless steel
- Cover finish - super polished, the mirror effect, the highest quality available on the market
- the shower tray blends in perfectly with glass, wood and tiles
- new, modern, trendy solution





SHOWERLAY

The SHOWERLAY underfloor shower panels comprise an XPS board with a plastic reinforcing mesh, coated with a double coat of a dedicated cement mortar. The product includes a linear shower drain, complete with a cover, and a matching DROP35 drain trap. The essential advantages of the SHOWERLAY include: waterproofing, a slope towards the linear drain, perfect adhesion to top board layer, the top board layer strength sufficient for safe laying of even the finest mosaic tiles, and high acoustic insulation performance.

SHOWERLAY

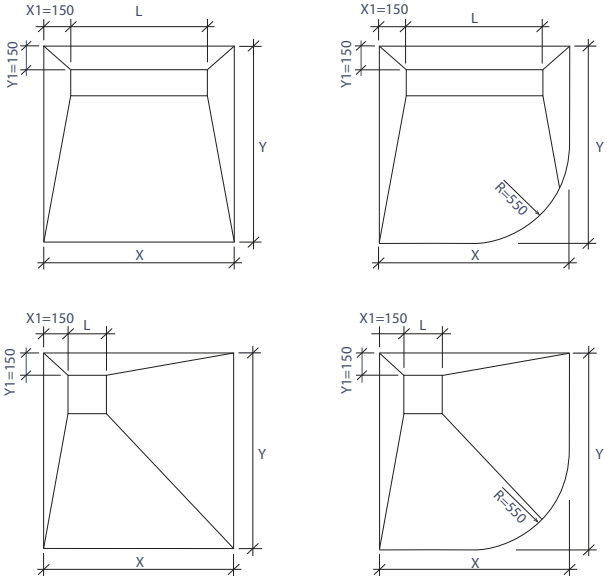
For this product you can buy:
• TANKING KIT s. 44

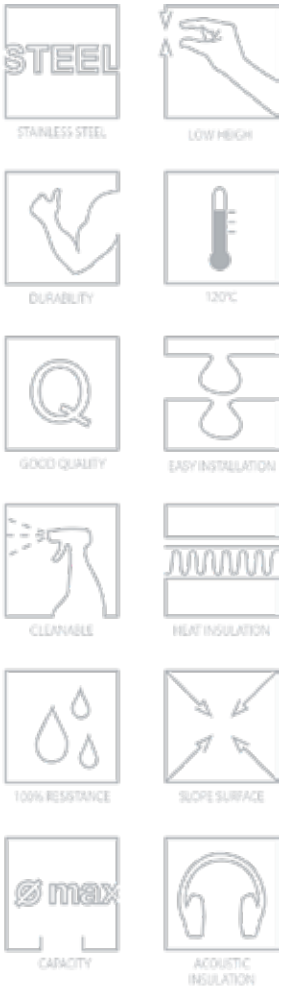
The properties of the WIPER SHOWERLAY prefabricated panels:

- 100-percent efficient waterproofing
- Downgrade towards the linear/point drain
- Perfect adhesion to top board layer
- The top board layer strength sufficient for safe laying of even the finest mosaic tiles
- High acoustic insulation performance
- Available panel thickness: 20, 30, 40, or 50 mm
- The XPS board needs to be supported under the full surface after the installation
- We can produce other sizes and arrangements of drains on custom order

To specify your order, provide these details:

1. The shower tray thickness (20, 30, 40, or 50 mm)
2. Shower tray type (LINE – with a linear drain or POINT – with a point drain)
3. Overall shower tray size in plan: X and Y
4. Linear/point drain grate design





SHOWERLAY
ONEWAY

NEW

OneWay underfloor single-pitched showerlay were created in response to customer demand. They are made of XPS board in a set with a factory-mounted and sealed stainless steel linear drain with a grate in a pattern to choose from and a DROP 35 drain siphon. Simple and modern solution for creating a walk-in shower tray.

realization ~7 working days

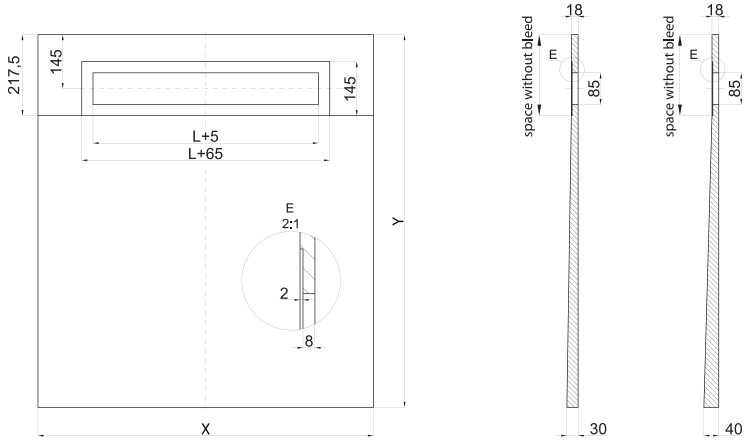
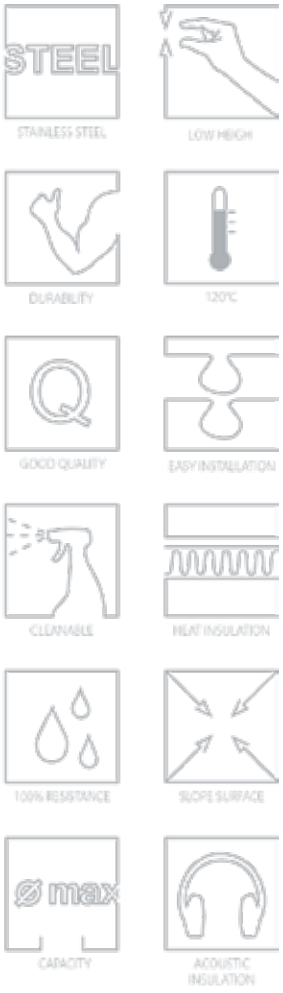
- High acoustic insulation performance
- Available panel thickness: 30 or 40 mm
- The XPS board needs to be supported under the full surface after the installation
- We can produce other sizes and arrangements of drains on custom order

To specify your order, provide these details:

1. The shower tray thickness (30 or 40 mm)
2. Overall shower tray size in plan: X and Y
3. Linear drain grate design





SHOWERLAY
ELITE

Showerlay Elite underfloor shower panels are the ideal solution for custom height tiles. The integrated XPS slab along with the Elite linear shower drain features a reliable dual drainage system, so the user can be sure that no water will collect under the tiles. The drain is available in five color versions so that it gives the room an elegant look that matches the rest of the fixtures.

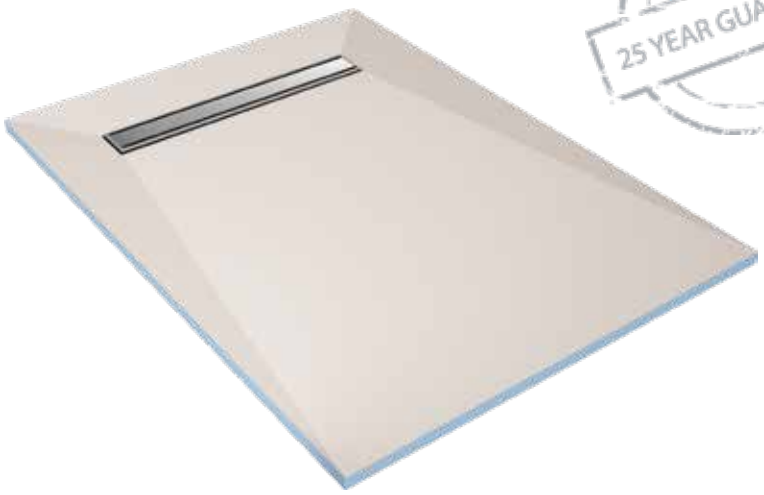
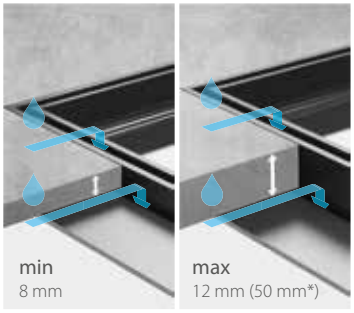
SHOWERLAY ELITE



For this product you can buy:

• TANKING KIT

• adjustable tile space height
• dual drainage system



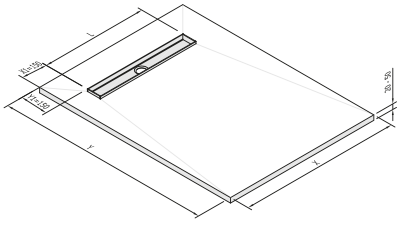
* option

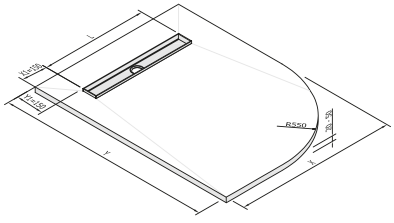
The properties of the WIPER SHOWERLAY ELITE prefabricated panels:

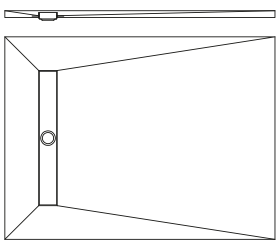
– 100-percent efficient waterproofing
– Dual drainage system
– High acoustic insulation performance
– Perfect adhesion to top board layer
– The top board layer strength sufficient for sale laying of even the finest mosaic tiles
– Available panel thickness: 20, 30, 40, or 50 mm
– The XPS board needs to be supported under the full surface after the installation
– Five color versions of the drain (gold, honey gold, bright gold, silver, black)
– We can produce other sizes and arrangements of drains on custom order

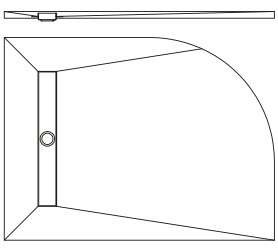
To specify your order, provide these details:

1. The shower tray thickness (20, 30, 40, or 50 mm)
2. Overall shower tray size in plan: X and Y
3. Linear drain grate design









SHOWERBASE

SHOWERBASE underfloor shower trays include an XPS slab with an adhered sealing mat, a shower gutter including a grid in a pattern of your choice, and a corresponding DROP35 drain trap. The main advantages of SHOWERBASE are: 100% double waterproofing, profiled slope towards the drain gutter, excellent adhesion of glue to the top layer of the board, hardness of the top layer allowing gluing even very small mosaics, high sound insulation, increased size of the mat in relation to the board allowing good sealing.

SHOWERBASE
ELITE

Showerbase Elite is a combination of functionality (dual drainage system, adjustable drain height, 100% waterproofing) and an affordable floor slab installation process. The slab is available in a variety of sizes and four basic thicknesses, which make it possible to achieve a properly contoured slope towards the drainage. Take advantage of Showerbase Elite floor slab if you need a reliable solution for your bathroom.

SYSTEM ISOL-ONE

ISOL-ONE is a complete system of waterproofing and sealing products for wet rooms and surfaces which require waterproofing layer: bathrooms and shower units in private homes, hotels, and public buildings. The ISOL-ONE sealing mat is made of polyethylene film, both sides of which are coated with a specially formulated cloth for better bonding of the adhesive. It is recommended for installation in all rooms which require this sealing and waterproofing method. The mat is impervious to substrate cracking, ensures a secure waterproof seal over its whole surface of coverage, and reduces the installation time by allowing tile laying directly after adhesive bonding of the mat. Flexible quick-setting adhesives are recommended for the installation process, e.g. PCI Rapid Light.

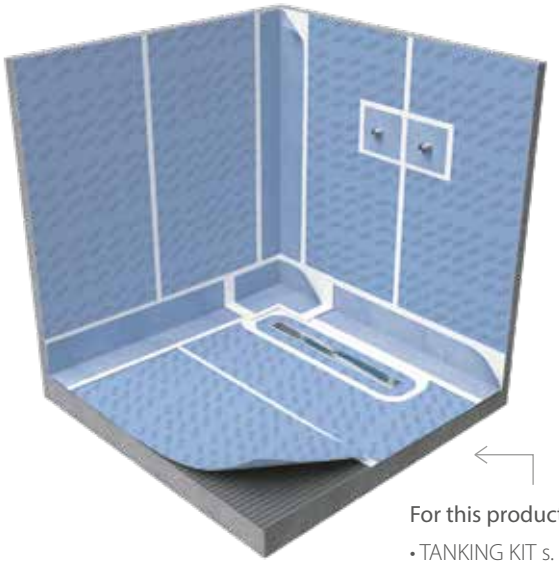
SYSTEM ISOL-ONE



For this product you can buy:

• TANKING KIT s. 44

The ISOL-ONE installation sealing mat is made of polyethylene film, both sides of which are coated with a specially formulated cloth for better bonding of the adhesive. It is recommended for installation in all rooms which require this sealing and waterproofing method. The ISOL-ONE mat is lightweight and resists corrosion and decomposition, ensures a level thickness of the waterproofing layer, resists cracking of the substrate, ensures a secure waterproof seal over its whole surface of coverage, and reduces the installation time by allowing tile laying directly after adhesive bonding of the mat. The components are made of thermoplastic elastomer coated with cloth on both sides. This endows the product with high flexibility and resistance to aggressive media. The mat highly protects corners, edges, superficial cracks, and plumbing penetrations against ingress of moisture by forming elastic and durable joints.

PROPERTIES:

– Watertight
– Plastic
– Bridges cracks
– Ready to use
– Reduced time to proceed with downstream work

ADVANTAGES:

– Binds with every tile laying system
– Seals corner grout in wet rooms by forming flexible and durable joints

APPLICATION:

– Indoor and outdoor
– For walls and floors
– For wet rooms, e.g. bathrooms and shower units in private homes, hotels, and public buildings (moisture load classes A01, A02, A1, and A2)
– Balconies and patios
– For water-sensitive surfaces, e.g. gypsum plaster, gypsum blocks and panels, drywall panels, and chipboards
– For installation on water-absorbing mineral substrates, e.g. concrete, screed, cement render, cellular concrete, cement-based putties, and levelling compounds

TANKING KIT
FOR SHOWER CABIN

The sealing kit is intended for waterproofing of substrates to be clad in ceramic tiles inside of wet rooms. It is recommended for locations which require a high waterproof performance in presence of high moisture levels (like shower units, bathrooms, toilets, laundry rooms, kitchens, etc.). The waterproofing solution is suitable for all substrate types: drywall panels, plastered walls, gas concrete masonry walls, engineered wood, old cladding of ceramic or stone, and more.

wiper®

TANKING KIT

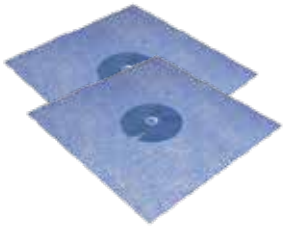
TANKING KIT INCLUDES:

- tanking liquid 4 kg

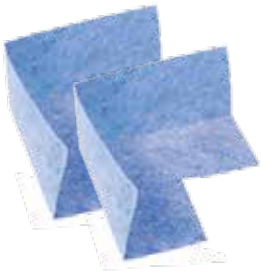
- primer 1 l

- sealing tape 10 m

- pipe collar 2 pcs.



- corners 2 pcs.



TANKING LIQUID:

The tanking liquid is a ready-to-use, one-component solvent free sealing compound based on a dispersion of polymers, fillers, and modifiers. When applied to the substrate and set, the product forms a waterproofing coating. The product is intended for permanently occupied interiors, predominantly wet rooms (like bathrooms, kitchens, and laundry rooms), for waterproofing underneath cladding and flooring made with ceramic tiles, glazed tiles, terracotta, timber and wooden panel floorings, and synthetic carpets.

PRIMER:

The product is intended for priming of absorbing, porous substrates indoors and outdoors. It is especially recommended for lime and cement plaster, gas concrete, drywall panels, and cement render. The primer highly penetrates the substrate which deeply absorbs it, becoming stronger and still breathing vapours. These advantages improve the structure of the substrates which have degraded over time. The priming solution improves adhesion of materials to be applied to the sealed substrate. By reducing the absorptivity of the substrate, the yield of applied emulsion paints, adhesives, and mineral putties is improved. The solution contains a biocidal and a fungicidal which preserves the substrate against mould and bacterial growth in the product container.

SUNFLOOR
HEATING MATS

NEW

The SUNFLOOR heating mat is a modern, easy to install solution to provide the primary or auxiliary heating system at your home. It is thin (4 mm), which makes it easy to install without making the flooring system thicker. The heating mat can be easily embedded in a layer of levelling screed or adhesive mortar, directly under the tiles, without raising the floor surface.

25 YEAR GUARANTEE

realization
~48 h

SUNFLOOR HEATING MATS

Product kitting:

- 50 cm x 2 ÷ 30 m heating mat
- Thermostat with Wi-Fi connectivity (optional)
- Floor temperature sensor
- Shielding zip tube
- Mobile app
- Detailed instructions

The roll width is 50 cm. Thanks to this, the mat can be easily laid out in small rooms, like bathrooms. The mesh to which the cable is attached can be freely trimmed to size and make turns, U-turns, or bypass furniture or other fitments. Do not damage the heating cable while cutting the product to size. The mesh is coated with an adhesive for much easier initial layout fitting. When finally aligned, the mat can be bonded in place with self-adhesive strips.

The digital controller offered for Sunfloor heating system is a modern digital device with Wi-Fi connectivity for convenient operation with mobile devices. The controller features a modern, minimalist design for a discreet match for any bathroom style. The intuitive touch control panel makes operation user-friendly. The compact front face size of 8.5 x 8.5 cm and a low depth make flush installation easy. The controller provides plenty of convenient features, like open window detection, night mode, anti-freezing mode, and much more. A single unit supports a system of 3600 watts maximum (max. load of 16 amps, which is approximately 23 m^2).

The manual controller has two temperature sensors (built-in air and floor sensors for connection), thanks to which it is possible to precisely determine the room temperature in depending on the situation. The device has two visible buttons (switch and control knob temperature), making it very easy to use. In addition, the driver has the appropriate safeguards that prevent damage to the heating system. Choosing air temperature sensor option with floor temperature limit during device installation, you can easily protect e.g. a wooden floor against overheating.

The Warmme app is very simple to configure, intuitive software that allows you to remotely monitor and set the heating temperature with a mobile phone connected to the same Wi-Fi network as the thermostat control. The app allows you to configure separate temperature settings for different rooms. You can define an advanced heating schedule to reduce energy consumption when no one is at home or when a lower indoor temperature is required at night. You can download the Warmme mobile app to your phone from Google Play or Apple App Store by scanning the QR code from the manual sheet included with the controller.

SUNFLOOR
HEATING FOIL

Sunfloor heating film is the ideal solution for providing additional heating under the panels in any home. The biggest advantage of the heating film is the fact that it is installed in a dry system, i.e. without forging in the floor and subsequent sinking into the screed or glue. The foil is efficient, yet economical. It heats up quickly and gives a pleasant, natural heat radiating from the lowest parts of the room.

realization
~48 h

SUNFLOOR HEATING FOIL

Skład zestawu:

- heating foil on a roll
- flexible sensor tube
- insulation tape
- connection terminals
- connection leads
- clear step-for-step installation instruction
- pressure distribution and crimping pliers

The heating foil is designed for use under laminate, wood panels, planks and parquet. It is installed in a dry system, that is, without the need for forging in the floor and subsequent sinking into the screed or glue as in the case of heating mats. It is ideal as an additional source of heat in living rooms, hallways, corridors, bedrooms or offices.

The foil is efficient, yet economical. It heats up quickly and gives a pleasant, natural heat radiating from the lowest parts of the room. Unlike other types of heating such as air conditioners or stoves or radiators, it requires no additional operation or maintenance and is completely invisible. Underfloor heating offers the most human-friendly, even temperature distribution in the room and is a type of heating recommended for allergy sufferers due to less convective movement, which translates into less dust circulating in the air.

The Warmme app is very simple to configure, intuitive software that allows you to remotely monitor and set the heating temperature with a mobile phone connected to the same Wi-Fi network as the thermostat control. The app allows you to configure separate temperature settings for different rooms. You can define an advanced heating schedule to reduce energy consumption when no one is at home or when a lower indoor temperature is required at night. You can download the Warmme mobile app to your phone from Google Play or Apple App Store by scanning the QR code from the manual sheet included with the controller.

WIPER SOUND STOP

SOUNDPROOF MAT

NEW

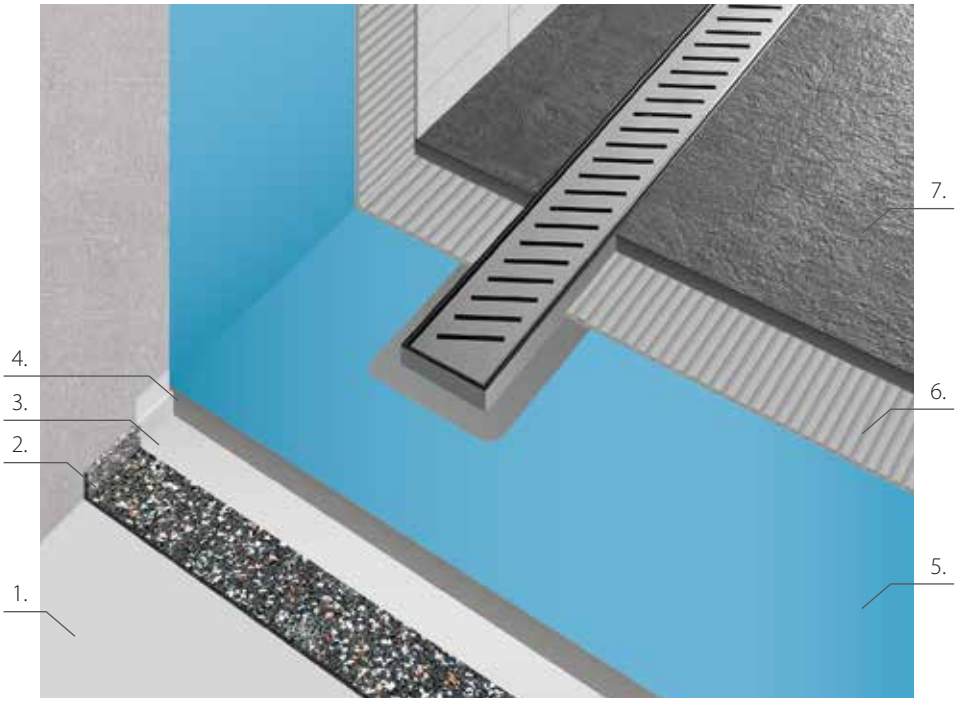
The Wiper Sound Stop sound insulating mat is recommended for acoustic insulation between two adjacent building floors. It effectively absorbs noise and vibration in every shower unit. Sound insulation is recommended for shower units with a low installation height, which results in higher noise due to the acoustic layer originally missing from the separating floor plans.

realization
~48 h

WIPER SOUND STOP

The mat size is 125 x 125 cm with a thickness of mere 0.6 cm. The normal sound reduction over a 35 mm thick screed coat is 19 dB(A). The material is reprocessed rubber with a dedicated PUR elastomer binder. Compared to other acoustic insulation systems, it is extremely resistant to pressure and compression.

Diagram of the assembly of the soundproofing mat:



1. leveled substrate
2. soundproof mat
3. isolation foil PE
4. screed
5. waterproofing
6. tile adhesive
7. flooring

Material:
Granulated rubber with PUR elastomer binder

Surface:
Smooth with a grainy texture

Surface unit weight:
3.870 to 4.730 g/m^2

Density:
680 to 750 kg/m3

Compressibility:
(DIN EN 12431) < 1.0 mm

Dynamic stiffness:
< 70 MN/m^3

Max. pressure:
(EN 826) 0.2 N/mm^2

Tensile strength:
(ISO 1798) approx. 0.4 N/mm^2

Ultimate elongation:
(ISO 1798) approx. 50%

Temperature range:
-30 °C to 80 °C

Heat transfer coefficient:
(ISO 8302) 0.05 m^2 K/W

Flammability class:
(ISO 13501) E

Impact sound reduction:
ΔLW = 19 dB at 6 mm
(over 35mm thick screed)

Emission level:
AgBB program compliant
