Buildings Simply Made Better

Patented *Solution*

Integrated Operational Optimization
With the Optimization Bundle by aedifion

ESG performance, operating processes and plant technology at a glance at all times - with the Optimization Bundle from aedifion, you have all the levers in your hand to operate your building sustainably, efficiently and transparently. The cloud platform enables savings of up to 40% without any construction measures or investments.

- Transparency and evaluation of building quality
- Efficient and effective recommendations for action
- Improvement of ESG performance
- Easy and fast scalability
- Identification of operational errors and their causes
- Fully compliant with GEG § 71a, 1,2 & 4

The software bundle is the complete solution from holistic data collection to AI-based data analysis and intelligent control of the systems, continuously supported by our experienced engineers. Operation optimization made simple.

Save up to **40 %**
energy, CO_2 & operating costs

Optimization Bundle
Your Components on the Way to Sustainable Building Operation

.io
Data Availability & Monitoring

.io connects via our Plug-and-Play solution to all subsystems of BAS and makes the data of the BAS available on our platform. Smart meters can easily be integrated.

.controls
Optimization from the Cloud

.controls is the digital system upgrade for autonomous, self-learning optimization. For an efficient, cost-effective operation.

.analytics
Analysis with Artificial Intelligence

.analytics uses artificial intelligence in automated analyses to generate recommendations for increasing energy efficiency.

.elevate
Service-Plus all around the platform

Our engineers guide you as you work with the platform, keeping an eye on the analytics and curate the results and recommendations for you.
