## TA-Nano

**Combined control & balancing valves for small  
terminal units**

Pressure independent balancing and control valve  
(PIBCV)

# TA-Nano

The pressure-independent balancing and control valve TA-Nano ensures optimum performance over a long life. Adjustable maximum flow enables design flow and eliminates overflows for accurate hydronic control. The TA-Nano Plus together with our balancing instruments enables advanced measuring and diagnostics.

## Key features

### Standard and Plus version

Flexibility for customer needs.  
Standard: no measuring points  
Plus: measuring points and flushing

### Smallest PIBCV in the market fitting within the most constrained area

Slim and compact shape simplifies installation.

### Precise hydronic balancing

Smoothly adjustable setting of max. flow prevents over flow through terminal unit.

### Full control of the system (Plus)

Exact flow measuring and unique diagnostic functions for ultimate energy savings and highly reliable system.

### Precise setting and ease of commissioning

Valve position visible when actuator is mounted, easy valve identification with colour coding.

### High reliability

High resistance to corrosion using AMETAL<sup>®</sup>, strong resistance to dirt and completely tight valve.

## Technical description

### Application:

Heating and cooling systems.

### Functions:

Control  
Pre-setting (max. flow)  
Differential pressure control  
Measuring ( $\Delta H$ , T, q) \*  
Flushing \*  
Isolation (for use during system maintenance – see also Leakage rate)  
\*) Plus version only

### Dimensions:

DN 10-25

### Pressure class:

PN 25

### Differential pressure ( $\Delta pV$ ):

Max. differential pressure ( $\Delta pV_{max}$ ):  
600 kPa = 6 bar  
Min. differential pressure ( $\Delta pV_{min}$ ):  
DN 10 NF/15 LF/15 NF:  
15 kPa = 0.15 bar  
DN 15 HF: 20 kPa = 0.20 bar  
DN 20 NF: 18 kPa = 0.18 bar  
DN 20 HF: 30 kPa = 0.30 bar  
DN 25 NF: 25 kPa = 0.25 bar

(Valid for position 10, fully open. Other positions will require lower differential pressure, check with the software HySelect.)

$\Delta pV_{max}$  = The maximum allowed pressure drop over the valve to fulfill all stated performances.

$\Delta pV_{min}$  = The minimum recommended pressure drop over the valve, for proper differential pressure control.

### Flow range:

The flow ( $q_{max}$ ) can be set within the range:

DN 10 NF: 18 - 180 l/h  
DN 15 LF: 28 - 280 l/h  
DN 15 NF: 54 - 540 l/h  
DN 15 HF: 95 - 950 l/h  
DN 20 NF: 120 - 1200 l/h  
(DN 20 HF: 160 - 1600 l/h)  
(DN 25 NF: 220 - 2200 l/h)

$q_{max}$  = l/h at each setting and fully open valve plug.

LF = Low flow  
NF = Normal flow  
HF = High flow

**Temperature:**

Max. working temperature: 120 °C  
 Min. working temperature: -10 °C

**Note:** If the medium temperature is below 2 °C, then ice forming on the spindle must be prevented. Therefore valves should be insulated with vapor tight insulation (stem extension can be used). IMI valves were tested for performance and durability with mono-ethylene as well as mono-propylene glycol up to a concentration of 57%.

**Media:**

Water or neutral fluids, water-glycol mixtures (0-57%).

**Lift:**

4 mm

**Leakage rate:**

Tight sealing (Class VI according to EN 60534-4).

**Characteristics:**

Linear, best suited for on/off control.

**Material:**

Valve body: AMETAL®  
 Valve insert: AMETAL® and PPS  
 Valve plug: PPS  
 Spindle: Stainless steel  
 Spindle seal: EPDM O-ring  
 Δp insert: Brass CW614  
 Membrane: EPDM  
 Springs: Stainless steel  
 O-rings: EPDM  
 Setting wheel: PA

Measuring points: AMETAL®  
 Sealings: EPDM  
 Caps: Polyamide and TPE

AMETAL® is the dezincification resistant alloy of IMI.

**Marking:**

IMI, PN, DN and flow direction arrow.  
 Insert: TA-Nano, DN (+LF/NF/HF)  
 LF: Red insert.  
 NF: White insert.  
 HF: Grey insert.

**Connection:**

Internal thread according to ISO 7.  
 External thread according to ISO 228.

**Connection to actuator:**

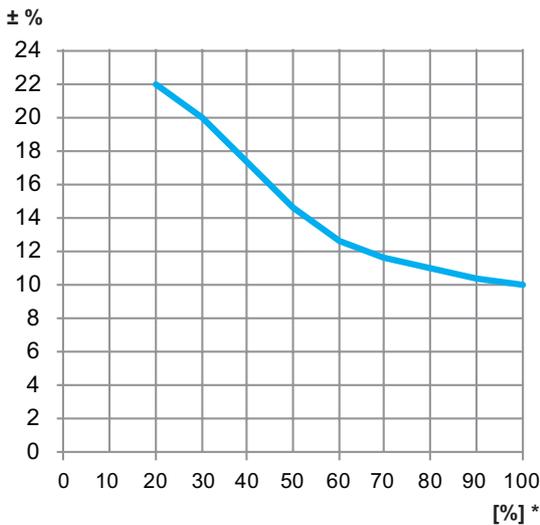

M30x1.5

**Actuators:**

See separate technical documentation on EMO T\*, EMO TM\* , TA-TRI and TA-Slider 160.

**Measuring accuracy**

**Maximum flow deviation at different settings**

\*) Setting (%) of fully open valve.

## Correction factors

The flow calculations are valid for water (+20°C). For other liquids with approximately the same viscosity as water ( $\leq 20$  cSt =  $3^\circ\text{E} = 100\text{S.U.}$ ), it is only necessary to compensate for the specific density. However, at low temperatures, the viscosity increases and laminar flow may occur in the valves. This causes a flow deviation that increases with small valves, low settings and low differential pressures. Correction for this deviation can be made with the software HySelect or directly in our balancing instruments.

## Noise

In order to avoid noise in the installation, the valve must be correctly installed and the water de-aerated.

## Actuators

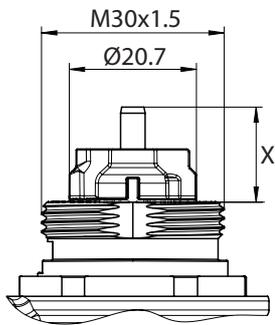

The valve is developed to work together with recommended actuators according to table. Care should be taken by the user to ensure that actuators not manufactured by IMI are fully compatible to provide optimal control from the valve. Failure to do so may provide unsatisfactory results.

See separate catalogue leaflets for more details about the actuators.

Actuators of other brands require;

Working range: X (closed - fully open) = 11,7 - 15,7

Closing force: Min. 100 N

### Maximum recommended pressure drop ( $\Delta pV$ ) for valve and actuator combination

The maximum recommended pressure drop over a valve and actuator combination for close off ( $\Delta pV_{\text{close}}$ ) and to fulfill all stated performances ( $\Delta pV_{\text{max}}$ ).

DN	EMO T/EMO TM/TA-TRI/TA-Slider [kPa]
10	600
15	
20	
25	

$\Delta pV_{\text{close}}$  = The maximum pressure drop that the valve can close against from an opened position, with a specified force (actuator) without exceeding stated leakage rate.

$\Delta pV_{\text{max}}$  = The maximum allowed pressure drop over the valve to fulfill all stated performances.

## Sizing

1. Choose the smallest valve size that can obtain the design flow with some safety margin, see “ $q_{\max}$  values”. The setting should be as open as possible.
2. Check that the available  $\Delta pV$  is within the working range  $\Delta pV_{\min}$  (according to DN) - 600 kPa.

### $q_{\max}$ values

Low flow (LF)

Normal flow (NF)

High flow (HF)

	Position									
	1	2	3	4	5	6	7	8	9	10
<b>DN 10 NF</b>	18	36	54	72	90	108	126	144	162	180
<b>DN 15 LF</b>	28	56	84	112	140	168	196	224	252	280

<b>(DN 20 HF) *</b>	160	320	480	640	800	960	1120	1280	1440	1600
<b>(DN 25 NF) *</b>	220	440	660	880	1100	1320	1540	1760	1980	2200

$q_{\max}$  = l/h at each setting and fully open valve plug.

LF = Low flow

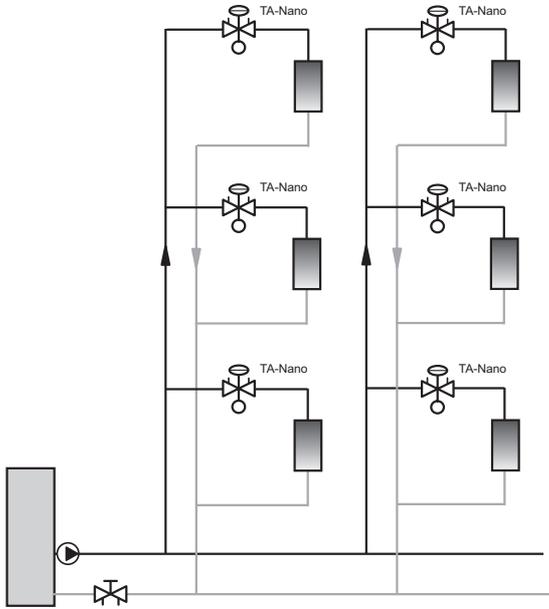

NF = Normal flow

HF = High flow

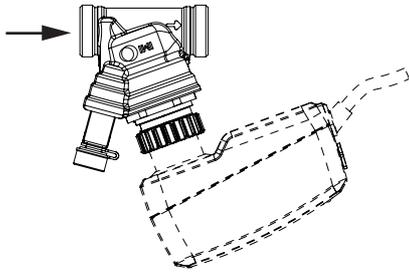

\*) Launch Sep -25, values not yet verified.

## Installation

### Application example

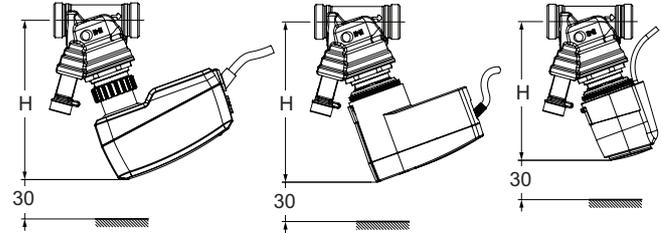

### Flow direction

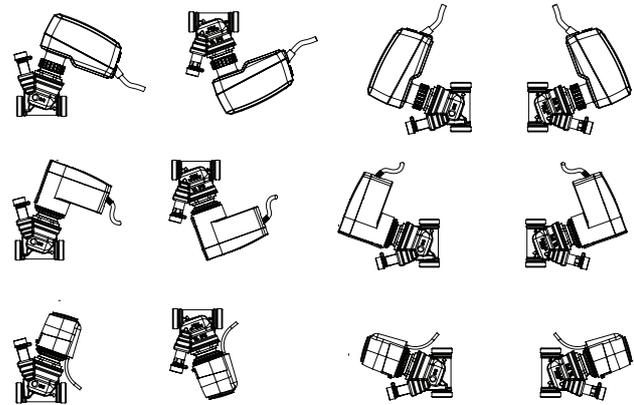

### Installation of actuator

**Note:** Free space is required above the actuator for easy mounting/dismounting.

	TA-Slider 160 H	EMO T/TM H	TA-TRI H

IP54

IP54

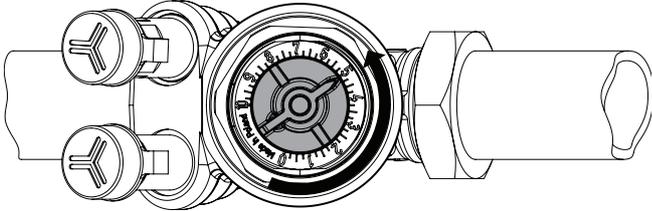

IP54

## Operating function

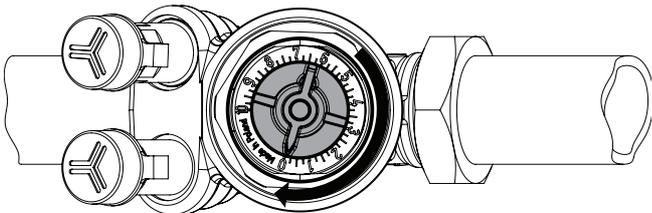

### Standard / Plus versions

#### Setting

1. Turn the setting wheel to desired value, e.g. 5.0.

#### Shut-off

1. Turn the setting wheel clockwise to 0.

### Plus version

#### Measuring q

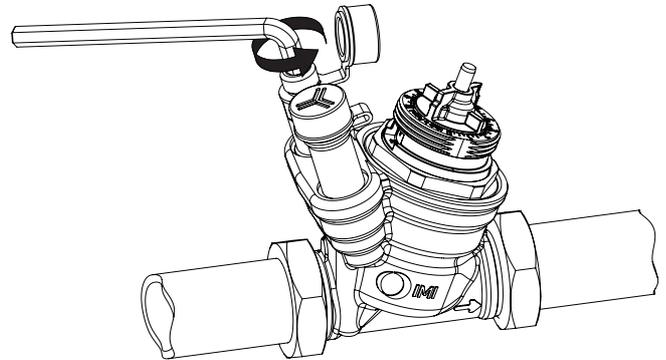

1. Remove the installed actuator.
2. Connect the IMI TA balancing instrument to the measuring points.
3. Input the valve type, size and setting and the actual flow is displayed.

#### Measuring $\Delta H$

1. Remove any actuator.
2. Close the valve according to "Shut-off".
3. Connect IMI TA balancing instrument to the measuring points and measure.

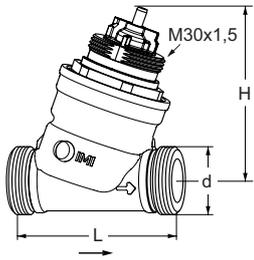

**Important!** Reopen the valve to previous setting after the measurement is completed.

#### Flushing

1. Remove any actuator.
  2. Open the valve fully, setting 10.
  3. Bypass the  $\Delta p$ -part by inserting a 5 mm Allen key in red measuring point and open  $\approx 1$  turn anticlockwise.
  4. Increase pump head to flush the valve.
- Important!** Set the valve to previous setting and close the bypass spindle after the flushing is completed.
