

Autocom AVILOO

Check the status of electric
vehicle batteries.

autocom®

Check high voltage batteries on electric and plug-in hybrid vehicles

Autocom AVILOO is one of few solutions to test the actual status of high voltage vehicle batteries. It is super easy and you get a full report of the battery health.

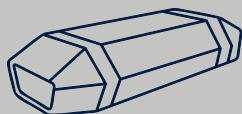

You only need an Autocom AVILOO unit to plug into the vehicle's OBD socket. The results will be sent to your e-mail.

3 minute electric vehicle battery check

You are standing in front of a used electric vehicle, wondering about the status of the high voltage battery. How can you check the remaining capacity?

Autocom AVILOO can help you. Connect the unit to the car and it will perform a full battery check in about 3 minutes. You then get a report of the battery status to show the customer or to the vehicle fleet manager of your company.

You can also perform a comprehensive battery test, where you get the battery analysed during drive. This test takes more time.

Autocom AVILOO unit
Easy to connect

Gain of customer trust
Done deal

Your benefits with Autocom AVILOO

- Get the answers you need
- Gain of customer trust
- Enables a more correct vehicle pricing
- Easy to use
- Informative reports
- TÜV-certificated battery certificate
- CARA certification (www.cara-europe.org)

Two tests - FLASH and PREMIUM

There are two test options to choose from. FLASH or PREMIUM. Both give you real time battery information and status. Check battery condition, State of Charge (SoC), State of Health (SoH) and much more .

FLASH Test

The fastest battery test. Detects possible defects and determines the functionality of the traction battery.

- 3 minute battery analysis
- Testing on parked vehicle
- Receive a test report

How FLASH Test is done

1. Plug the unit into the vehicle
2. Start the engine

The battery check starts (the LED flashes yellow). The test takes about 3 minutes (the LED turn green).

A test report is now sent to your e-mail.

PREMIUM Test

The most comprehensive battery test. Provides exact battery information and a TÜV certified battery certificate.

- Detect possible defects on the battery
- Battery is analysed during drive
- Independently measured SoH

How PREMIUM Test is done

1. Plug the unit into the vehicle
2. Charge the vehicle to 100%
3. Follow the instructions you have received
4. Drive the vehicle from 100% to 10% charge level in the course of your ordinary driving. You have up to 7 days to do this.

A certificate will be sent in a few days

How to order Autocom AVI100

Contact an official Autocom distributor for more information and to place an order.
