

MZ^X

COMPOSITE JIGS

MZx is the evolution of the already popular Celette dedicated MZ+Jig. It is most advanced change in manufacturing technology for the structural collision repair industry.

- Precisely printed in carbon fiber reinforced with metal inserts.
- Super light, under 40 lbs. per set and strong enough for every vehicle collision repair.
- Same high accuracy as steel jigs at a fraction of the weight.
- Requested and printed on demand for most vehicles in the Celette fixture bank since 1950.
- Reach difficult mounting areas where other system fall-short.
- Can be Combined with other Celette positioning technologies (MZ+, Cameleon, Naja holding device)
