

**Extraordinary USI.
Extraordinary High Efficiency.**

Chronotech HE

The art of finishing for **PROS.**

Chronotech HE

A safe and time-proof investment complying with the stringent standards

Thanks to the use of high efficiency technologies, the new design of the ventilation system, the use of cutting-edge material, **Chronotech High Efficiency** is able to offer a cabin that fully complies with the European standard EN 16985, in particular with regard to the required air speeds, mounting 2 engines (one in emission and one in extraction) each of 5.5 kW.

Cyclopean power, low consumption

With Chronotech HE **you only need 12 kW of installed power** instead of the usual 25 kW (be careful that other manufacturers may require even tripled power).

Conceived with our planet in mind

Cronotech HE maintains all the functional technical characteristics typical of the Chronotech spray booths, but **reduces the electrical consumption of each work cycle by 50%**.

When combined with a HRS equipped with bypass, Chronotech HE can reduce up to 50% of the heat consumption used for heating.

Spatial silence

Our designers have also intervened on comfort, making Chronotech HE such a quiet working environment that you will find it hard to believe that the cabin is in operation.

Light at its best

In addition, with the use of high-efficiency LED technology we have also reduced the electrical power required for the operation of the lights, **while ensuring intensity and quality of illumination during the application process without compromise.** Seeing is believing.

And that's not all

There are tons of other exciting features waiting for you if I would like to enter the HE world.

Contact us, our team is at your disposal: you can come and try the HE system whenever you want, and as much as you want, at our USI Training Center.

Extraordinary USI. Extraordinary Innovations.
