GREEN COJALI

Conserving the environment and searching for sustainability are issues that currently concern all companies, but especially those of the automotive sector.

This industry is obliged by European standards to significantly reduce the waste derived from vehicles and their components, as well as manage them at the end of their lifetime.

For this reason, Cojali has compiled a complete catalogue of products that promote efficient and sustainable consumption, under the name of Green Cojali.

The strategy is clear: Promoting responsible consumption of raw materials, playing a part in environment conservation and, in addition, helping those clients committed to this alternative to save costs.

EXHAUST GAS AFTERTREATMENT SYSTEMS

COOLING SYSTEMS

Our cooling systems adaptable to the main brands of truck, bus, light vehicle, passenger car, agricultural machinery and construction machinery are manufactured under the most demanding quality standards.

SUSPENSION AND BRAKE SYSTEM

In Cojali we give priority to the driving safety and the resource optimisation. We develop and manufacture the best brake and suspension systems compatible with the main brands of truck, bus and trailer.

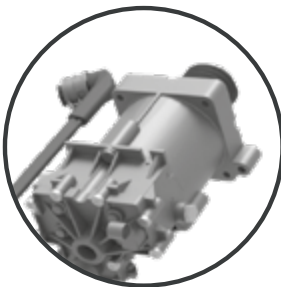

ELECTRICAL AND ELECTRONIC COMPONENTS

These are in charge of functions as important as the exhaust gas measurement, the cabin climate control or the fuel consumption reduction, therefore becoming essential elements to meet the current needs of the automotive sector.

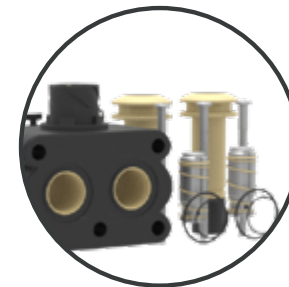

REMAN

In Cojali we are committed to the repair and extension of the useful life of components with electronic control. Our catalogue of remanufactured products includes brake callipers, valves, suspension and brake systems and ECUs.

TRANSMISSION AND POWER SYSTEMS

We offer a wide catalogue of components for the transmission and power systems of the main brands of truck and bus. Our clutch servos use the most modern techniques in hydraulic or pneumatic transmission.

REPAIR KITS

Repairing a component in the workshop can save time. Therefore, in Cojali we have applied all our experience as manufacturers in the development of a range of repair kits to make them available for our customers.

JALTEST DIAGNOSTICS

The multi-brand and multi-system diagnostics tool Jaltest Diagnostics has been designed and developed to carry out the most advanced tasks of diagnostics and vehicle maintenance, in a simple and intuitive way.

It provides coverage for commercial vehicles, trucks, buses, trailers and light vehicles, as well as for agricultural machinery, construction machinery and vessels.

VESSELS

Jaltest Telematics is the first solution in the market that combines traditional fleet management and innovative capacities, such as remote multi-brand diagnostics or predictive maintenance.

Through an on-board device, Jaltest Telematics is able to collect real data from the vehicle and its control units remotely and in real time, providing the user with exceptional power for fleet management.

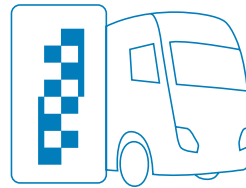

JALTEST TOOLS

Jaltest Tools product range is designed to supply the workshop with high-quality professional equipment, consistent with the current technology of commercial vehicles.

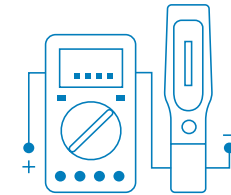

Together with Jaltest, the leading multi-brand diagnostics tool, it provides new business opportunities and an easy and guaranteed service for the final customer.

This combination will facilitate the most advanced tasks of diagnostics and maintenance of vehicles in a simple and intuitive way, not only at software level, but also at manual level and regarding verification tasks.

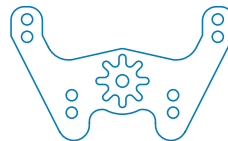

ADAS CALIBRATION AND TESTING EQUIPMENT

Jaltest Tools range launches onto the market, in a pioneer manner, the equipment and accessories necessary for the correct ADAS calibration systems present in commercial vehicles, always accompanied by detailed information for their installation and operation.

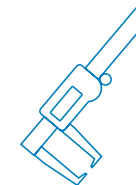

ELECTRICAL AND AUXILIARY EQUIPMENT

Jaltest by Cojali, based on its great experience in workshop diagnostics equipment, has developed under the Jaltest Tools brand a wide variety of instruments to be used in a complementary and frequent manner in order to perform diagnostics tasks and any subsequent action on the vehicle correctly.

SPECIAL TOOL

Jaltest Tools offers specific equipment necessary for maintenance and repair operations in essential components of the vehicle, such as gearboxes or engines.

PRECISION AND AUXILIARY TOOL

Jaltest Tools provides the workshop with the precision and auxiliary tools necessary for common maintenance and repair operations in vehicles in an agile and professional way.

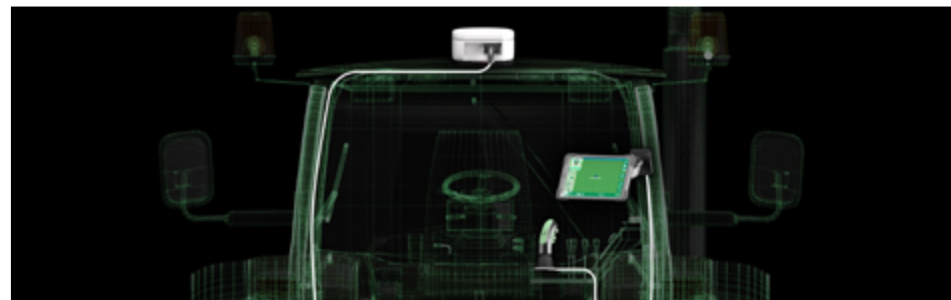

JALTEST ISOBUS CONTROL

JALTEST ISOBUS CONTROL offers solutions for the digitalisation of all types of agricultural equipment, ensuring compatibility between agricultural implements and tractors regardless of the manufacturer. The purpose is to achieve the maximum performance of agricultural equipment in order to manage successfully and easily a productive and efficient business, adapted to new technologies and environmental demands.

JALTEST UNIVERSITY

Jaltest University division gathers all our training offer, from on-site courses to e-learning courses or webinars. This way, we adapt to the needs for universal and quality training, at the disposal of any professional in the sector.

ALL MODALITIES

Accessible training: distance, on-site, live or recorded. Choose the modality that better suits your needs without giving up quality.

CONSTANT EVOLUTION

Content totally updated on the new repair reality where electrical and electronic problems play the main role.

REAL CASES

Courses focused on resolving doubts and real cases that arise at the workshop everyday, which makes them fully applicable to the daily development of your activity.

QUALIFIED TRAINERS

Trainers with wide expertise and more than willing to attend to the students.

INTERACTION WITH OTHER TECHNICIANS

Possibility of exchanging experiences and doubts with other professional colleagues.

FOCUSED ON DIAGNOSTICS

Our courses are based not only on the system knowledge, but also on its diagnostics and problem resolution.

COJALI OEM SOLUTIONS

In Cojali we provide the manufacturer with all the know-how acquired during our more than 30 years of experience in the industrial automotive sector.

We offer our wide expertise in the development of software and hardware solutions to build as a whole innovative products in a customised way.

As a reliable supplier, we actively capture the ideas of our clients and we take care of each detail of the process in order to obtain the result that better fits their service strategy.
