

Applicator Arches

Better clean, better experience

Features:

- Stainless-steel construction
- Quick and easy installation
- Custom signage offerings
- Delivers detergents to the vehicle with less distance to travel and greater accuracy
- Easy to maintain

In 2001, we patented a unique circular arch design that offered customers a more spacious experience and better surface cleaning. Today, this simple innovation continues to perfectly balance form and function in high-performance car washes across the world. Tommy's patented Applicator Arches are constructed from stainless-steel, the ideal material for car washes due to its durability, efficiency, and ease of maintenance. The arches are quick and easy to install, offer custom signage options, and deliver detergents to vehicles with greater precision over shorter distances, resulting in more effective washes. Start providing a better clean and a better experience for your customers.

Triple Presoak

Our Triple Presoak Arch makes prepping cars easy and free of hands-on work, while applying the proper dilutions and saving a large amount of presoak. The three different manifolds apply concentrated solution targeted to the front, rear, and entirety of the vehicle. Chemical tire applicators lower on the arch also target tires and wheels. Our Triple Presoak Arch includes a triple inner ring arch spray bar system with nozzles, which can be used for foam dispensing if equipped with two or more foam generators connected at the arch's top inlet.

Triple Coat

The triple foam coat is an important value-added service that can increase your car wash's revenue. Our Triple Foam Arch Applicator applies an even coat of multi-colored foam to the entire vehicle, adding extra shine and surface protection. Guests, especially children, will love this fun, upscale service and your business will benefit. Triple foam coat is applied by the patented inner arch manifold. Pumping stations sold separately.

Wax Applicator

Our Wax Applicators add a deep layer of protection and magnify paint reflectivity on customer vehicles. The smooth gliding formula is easily and safely applied to all exterior surfaces, including paint, chrome, plastic, and trim, and does not leave white residue. Our stainless-steel branded teardrop arch includes dispenser manifolds, fittings, signage, and lighting— everything you need to add this upsell item to your wash. Options for Ceramic Wax, Simonize Hot Wax, Hot Wax, and custom sign panels are available.

High Pressure Rinse

The teardrop-style applicator arch is our standard and preferred High Pressure Rinse Arch. This arch is made in stainless-steel with a full inner ring manifold. Sign panels and several LED light color options are available. The teardrop arch is accompanied by a four-row shower bar for maximized rinsing at maximum conveyor speeds. No moving parts reduces maintenance for the operator.
