 **MADE IN ITALY**

MAS DAMPER SRL was founded in 2019 by a Group of Industrial Investors which acquired the 25 years know-how and technology of Mediterr Shock absorbers S.p.A. The headquarters have been maintained in Asti/Italy in a complete new and functional plant adding the latest production systems and technologies to meet our customer's targets.

All components of your vehicle have been designed, tested and put-on trial according to severe parameters, in order to offer the best performance. To keep this quality level unchanged over time, it is vital that the spare parts are perfectly equal to the components of the vehicle just as this left the factory. MSA DAMPER shock absorber is a product which has a specific technology for freight transport, able to assure safety, comfort.

The goal of our Technical department is to design and develop projects according to customer technical specifications. With the help of 2D and 3D CAD software we are able to satisfy the market requirements for dampers and rubber to metal components and co-design new products both with customers or suppliers. In addition, FEM simulation is part of the design process for not-standard customized components.

MSA DAMPER guarantees its partners the delivery of reliable products with the best performances and optimized service intervals validated through its testing laboratory which can perform extreme life tests simulations.

MSA DAMPER has obtained the international certification ISO 9001-2015, welding certification EN3834-2/15085-2, ISOTS 22163 : 2017-IRIS3, EN 1391, ISO14001 and ISO45001. The aftermarket products are certified as original parts and equal to those and can be mounted to replace the OE components.

Even a shock absorber makes a difference! Maintaining solid contact between the tire and the road is essential to ensure driving safety, handling and load control. The condition of the shock absorber can be a key factor in the life of a commercial vehicle tyre. Genuine parts are the part that keeps your vehicle's value and strength intact. As established by the European Regulations, our company certifies that the articles placed on the market with the MSA DAMPER brand correspond, in quality, duration, functionality and technical characteristics, to the original spare parts used for assembling the vehicle.

Possibility to customize the product: Laser marking is the best technology to ensure the legibility and permanence of codes/names/brands. The laser can mark as small as 0.5 x 0.5 mm and can customize the shock absorbers according to the customer's requests.
