

FROM COMPETENCE TO EXCELLENCE.

Welcome to the home
of aftermarket

Editorial

Guido Berkefeld
Managing Director

MOIN [mɔɪn] a typical North German way of saying hello

Almost 50 years of Jürgen Liebisch GmbH. Over this time, we have continuously expanded our knowledge of the market so that we can not only serve our customers competently, but also with excellence. By doing so, we have built up a considerable international network of customers, suppliers and service providers.

Since 2004, we have been providing a comprehensive range of great value automotive spare parts under our own AIC Germany brand. In this way, we ensure that even those vehicles for which a repair with original parts would often not make sense due to cost reasons remain operational.

Performance-oriented

Our approach is based on understanding needs and requirements. What direction are the markets developing in? Are individual components specifically needed in order to conduct repairs in accordance with the current value of the vehicle? Or is a smart complete solution better suited?

AIC Germany currently lists over 13,500 items in its product range, thereby catering to the widest demands for spare parts of vehicles – no matter if with internal combustion engines or electric motors. We believe it is important to find targeted solutions for the aftermarket in order to meet the requirements of our customers.

Reliable

We believe that a trustful and sincere business relationship is as much about good stock management as it is about reliable and fast delivery. What we have on offer, we also deliver as quickly as possible. And this is not merely an empty promise. It is backed up by a delivery capability of over 90% and high delivery rates. An effective combination of teamwork and automation in our warehouse enables us to achieve short throughput times for incoming orders and fast delivery to our customers. Our sales team is a reliable point of contact for ensuring successful cooperation and maximum flexibility in all customer requirements.

We are at your service!

Welcome to the home of aftermarket

From competence to excellence

Five decades of success

Founded in 1975 as a two-man business in the middle of Hamburg, the Jürgen Liebisch GmbH has grown into a successful, medium-sized company for the independent automotive spare parts market. With our many years of experience in the market, we are one of the established suppliers of spare parts with a current value worldwide. Our entrepreneurial actions are always guided by the proven Hanseatic virtues. From Hamburg to all corners of the world - reliable, down-to-earth and authentic.

Today, we operate from our state-of-the-art logistics center in Glinde. Several thousand automotive spare parts are handled daily in our dynamic warehouse system. With the introduction of an automated small parts warehouse (AS/RS) in 2019, we can ensure fast and efficient picking of our parts with the help of 42 robots.

Core competence meets quality

With our broad product portfolio in over 100 product groups and more than 13,500 articles, we create solutions for the independent aftermarket. Our top priority is and remains the combination of high-quality products and fair prices, so that even older vehicles remain operational. It is important to us to respond flexibly to the needs of the market and our customers and to identify new trends at an early stage. In doing so, we benefit from the partnership-based cooperation with our international supplier and customer network. The success of our company is based not least on the high

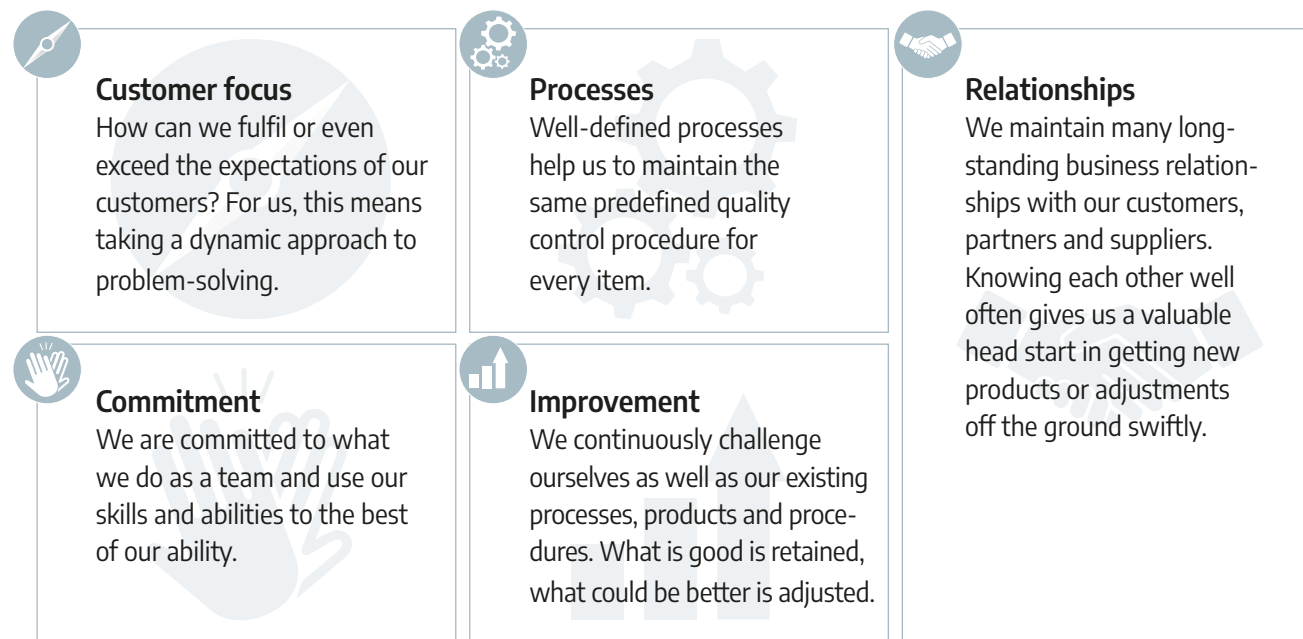

quality of our products and our high standard of service. Quality and safety in all areas are our top priorities, from the expertise of our employees to our work processes and the maintenance of various partnerships with original equipment manufacturers such as iwis, Dunlop Suspension Systems and Olsa. All this is supported by our sophisticated and TÜV approved quality management system. We do everything we can to offer our customers a high-quality and suitable solution for the aftermarket as well.

Quality is the **be-all** and **end-all**

Our quality work ethic

More premium - more choice! "AIC Premium" is the name we give products originating either directly from OE manufacturers or those manufactured in Germany. As part of our efforts to continually offer our customers more quality, our premium range is also growing steadily. Meanwhile, 11% of our entire range now consists of AIC Premium products – and the trend keeps rising!

16.500m²

Storage area

22.930

Storage bays

AS/RS

We store 80% of our items in our automatic small parts warehouse. This not only saves space but also time. Over 10,000 storage and retrieval operations per day are possible in 2-shift operation.

1.060m²

AS/RS size

WAREHOUSE

Using state-of-the-art technology and a highly motivated team, several thousand vehicle spare parts are moved through our central warehouse every day. We are constantly investing in technical innovations and the continued professional development of our employees to ensure that we can maintain the service that our customers value so highly as we continue to grow.

Robots

Innovation and **Teamwork**

When it comes to packing, we are fast, efficient and resource-friendly. Our packing machine provides us with a made-to-measure, neutral box for every parcel consignment.

Man and machine - Our logistics edge

Several thousand automotive spare parts are stored and handled in our dynamic warehouse system every day. With the introduction of an automated small parts warehouse (AS/RS) in 2019, we can guarantee fast and efficient picking of small parts with the help of 42 robots. Storage and retrieval as well as order picking from our high-bay warehouse is performed by a wide range of industrial trucks such as narrow-aisle trucks, front and reach trucks.

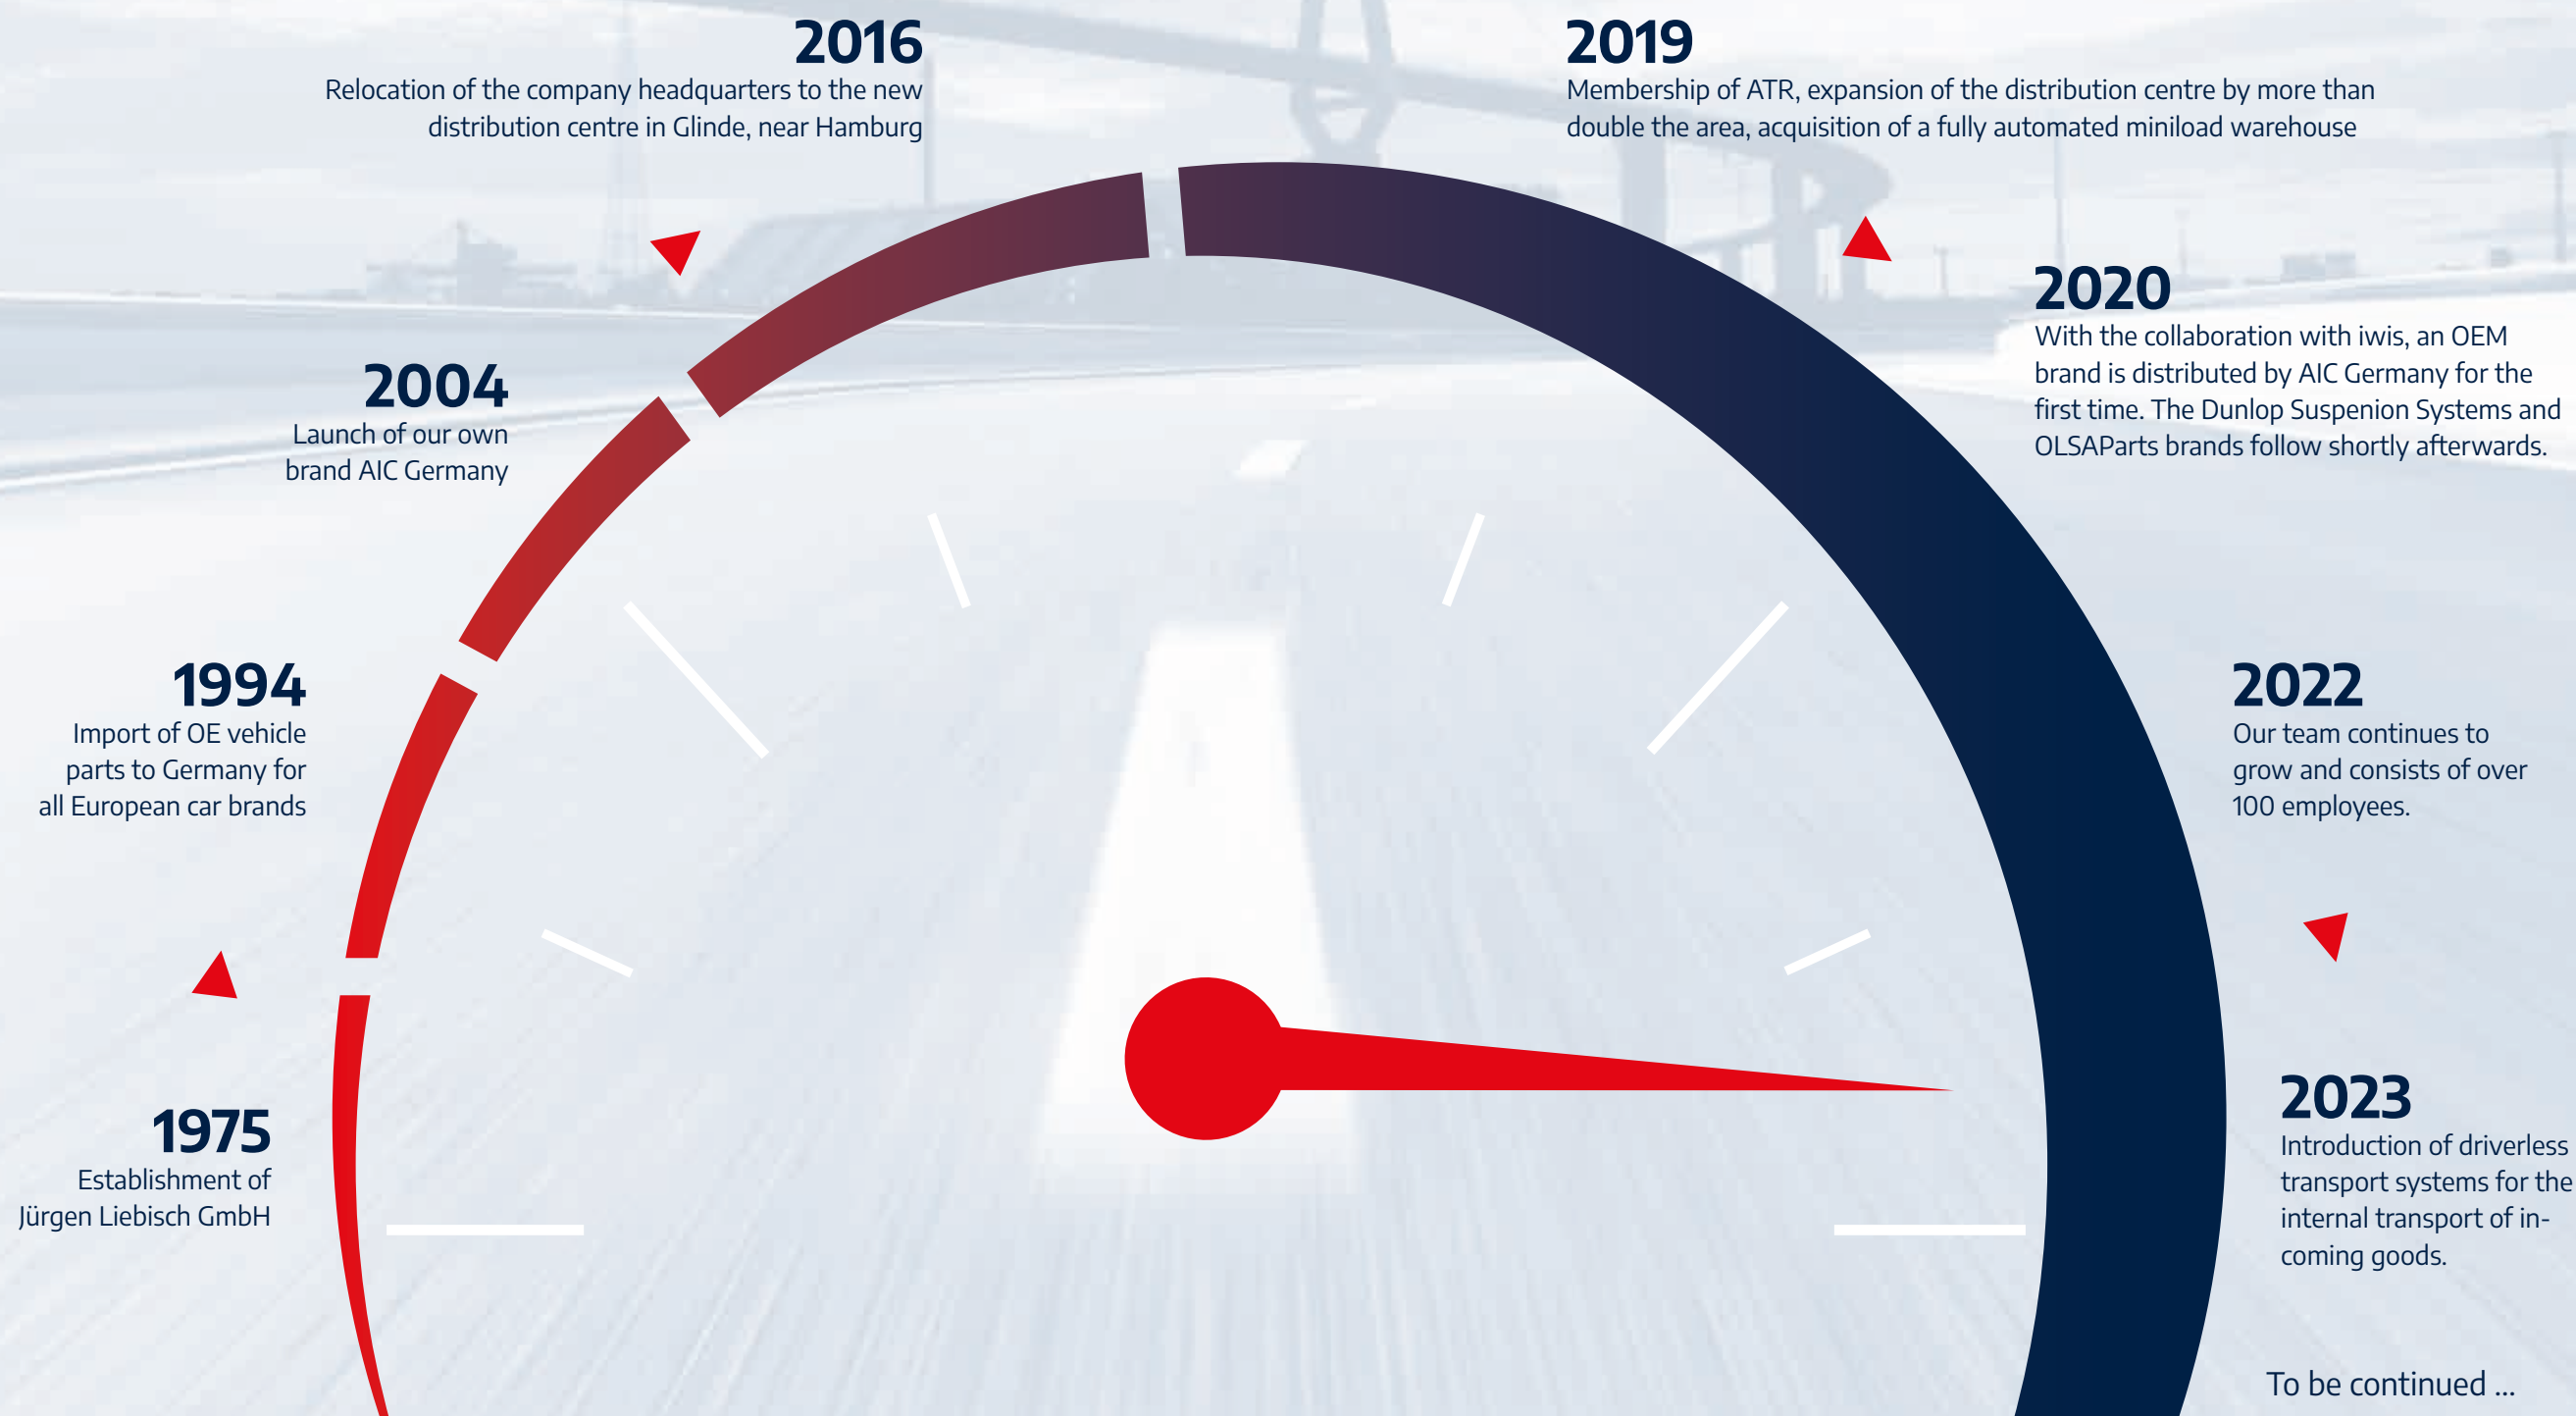

We are especially proud of our latest investment: an automatic packing machine. In our parcel dispatch area, this automation will enable us to send hundreds of consignments a day in the future. When picking and packing, we pay special attention to the quality of the products and the safety of each individual employee in all our processes, applying the dual control principle.

Shaping the market for five decades

What makes us proud:

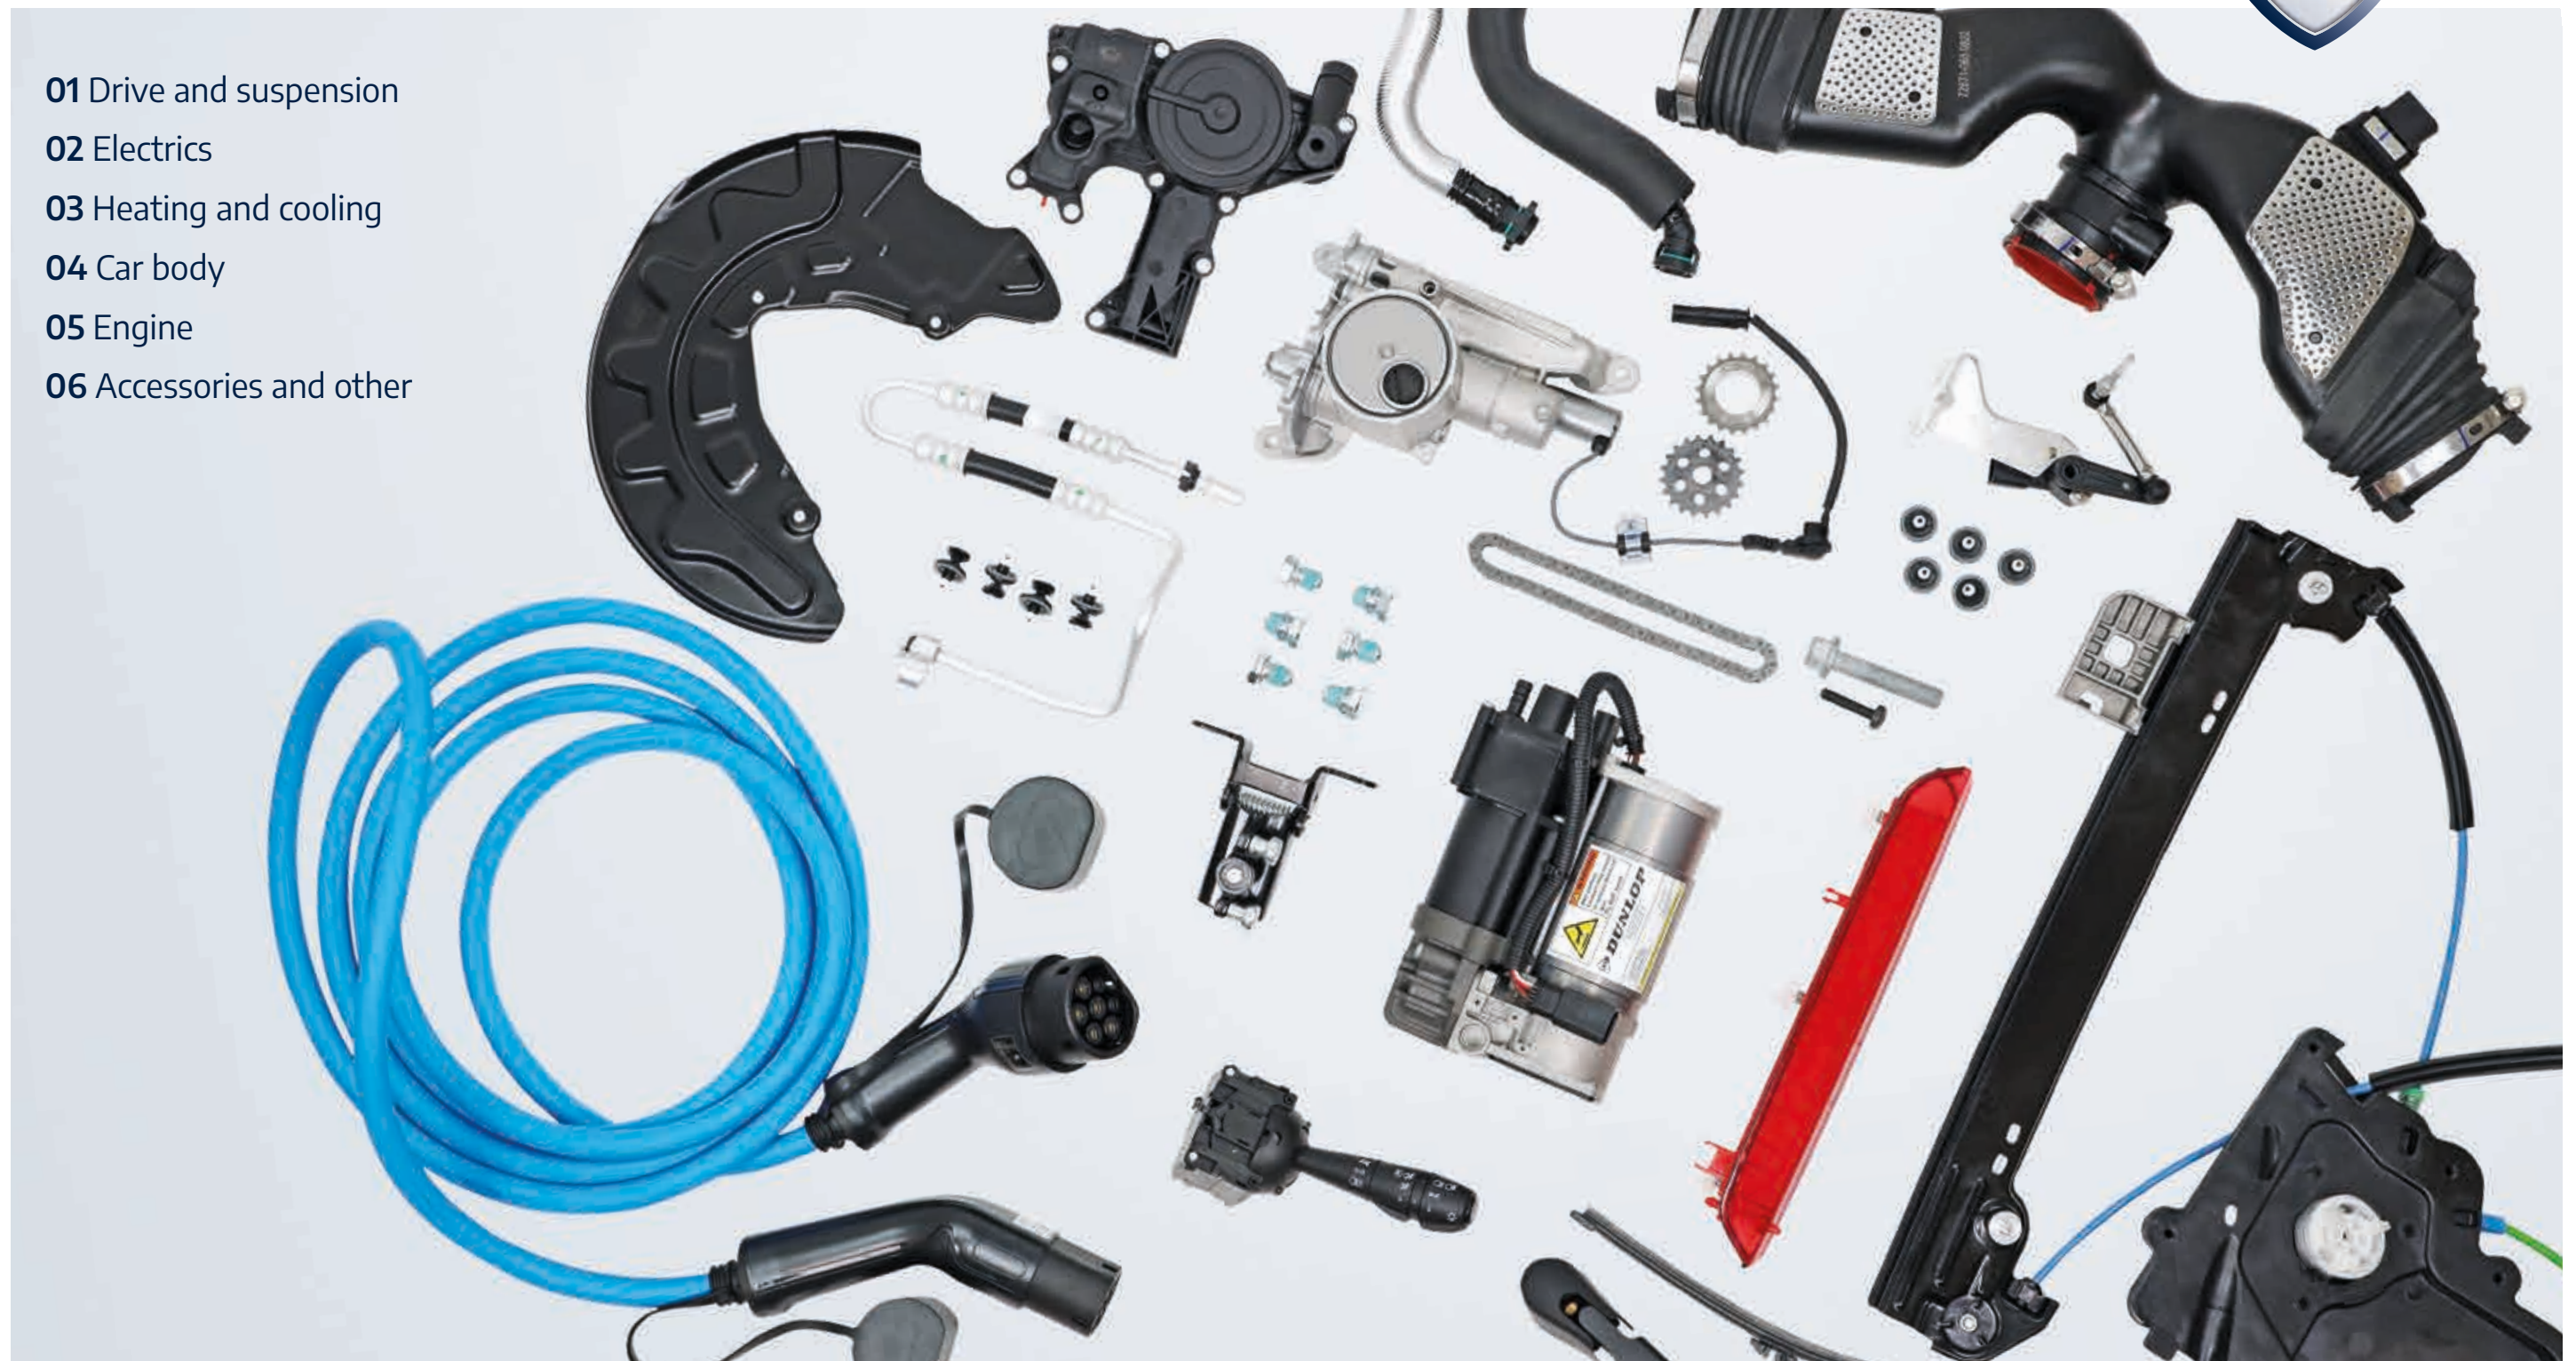

Our customer base is constantly expanding – and we have maintained business relationships with most of our customers for decades already. Our flexibility with customer enquiries and our level of expertise are particularly appreciated.

01

Drive and suspension

Convincingly good

Today's vehicles just keep getting heavier – a fact that puts a lot of stress on suspension components such as steering knuckles and wheel bearings. At AIC Germany, we recognised the market need for steering knuckles at an early stage. The initial niche product quickly developed into the best-seller in our range. Today we have a significant assortment in this area. There is also a wide selection of hydraulic hoses and wheel bearing sets at AIC Germany, and our portfolio is constantly being expanded.

steering knuckles • wheel hubs • wheel bearings • rubber-metal bearings • steering gear • suspension springs • ABS rings • locking plates • wishbones • splash plates, brake discs • brake pad wear indicator repair kits • brake / vacuum hoses • wheel brake cylinders • braking system vacuum pumps • brake retaining clips • valves • air compressors • shock absorbers • cables • selector rods • gearbox parts • speedometer drive wheels • joint sets • gearbox valves • release bearings • hydraulic hoses • steering parts • hydraulic pumps • axle pivots

Steering knuckle, wheel suspension

Control/Trailing Arm Kit, wheel suspension

AIC item no.: 74875Set
OE ref. no.: A203 330 1911

Suitable for*: e.g. Mercedes Benz C-Klasse and SLK

Hydraulic Hose, steering system

AIC item no.: 57179
OE ref. no.: 1737 517

Suitable for*: Ford Fiesta and Fusion

Sluggish steering? Speed and expertise now matter

Sluggish steering is often a sure sign of a fault in the steering system. Leaking oil poses a considerable risk to driving on the roads and to the environment. A sudden loss of steering assistance can also quickly lead to a serious accident.

With our hydraulic hoses in OEM quality, qualified specialists can quickly rectify steering problems.

Suitable for*:
BMW 5 Gran Turismo and Touring

02

Electrics

Repair kits – smart thinking

Increasing technology is placing ever greater demands on a vehicle's wiring harness. Driving assistance, air-conditioning and lighting systems, etc. all rely on a sound supply of power. They are not only partly relevant for vehicle inspections and safety, but also have a considerable impact on driving comfort, which no one wants to forego. In the event of a defect, smart product solutions from AIC Germany, such as repair kits, make the daily grind in the workshop easier. In the event of a cable break, only the damaged area needs to be replaced, not the entire wiring harness. This smart solution can be found, for example, on p. 24.

number plate lights • cables / adapters • bulbs • signal horn repair kits • headlights • fuses • relays • turn signal lights • voltage regulators- servomotors • bulb retaining springs • antennas • ignition units / distributors • distributor caps • ignition cable sets • plugs • sensors • switches

NOx sensor

Suitable for*: Skoda Octavia

03

Heating and cooling

**Comfort at the touch of a button**

Once considered a luxury, now mostly standard: Automatic climate control in the car. It regulates the interior temperature precisely and intelligently, in both summer and winter. As a result of this continuous usage and the vibrations it is in the engine compartment, air-conditioning lines in particular must withstand a great deal of wear and tear. It is not uncommon for them to leak and need replacing. In contrast to many OE suppliers, AIC Germany offers air-conditioning lines with seals for easy replacement.

blower motors • pre-switching resistors • heat exchangers • water flanges • electric fans • thermostats • radiators • water pumps • radiator hoses • fan clutches • air conditioning lines • air conditioning relays

Electric motor, interior blower

Car body

The small, subtle difference

A tailgate can be closed quietly or with a loud thud. The small but subtle difference is made by the tailgate's closing assistance mechanism. This convenient feature quietly pulls the tailgate into the latch. Furthermore, it also reduces the amount of human effort required, which makes a convenient difference, especially when it comes to larger models such as vans. An example of a tailgate lock from the AIC range can be found on p. 32.

interior switches • window regulators • door handles • pedals • window regulator cranks • bonnet insulation mats • repair plate retaining straps • gas struts • door locks • door retainers • central locking systems • steering wheel locks • lock cylinders • bonnet grips • splash guards

05

Engine

Runs like a well-oiled machine

Regular oil changes are an essential procedure to keep a vehicle running smoothly for the long term. This service alone accounts for a third of the revenue in garages and is therefore an absolute “routine procedure”. Besides the oil, it is also important to change all the necessary seals and filters to ensure that the lubrication system continues to function reliably. The transmission also needs new oil regularly. The interval is specified by the manufacturer. Complete transmission oil change kits with German brand-name oil and necessary accessories are supplied by AIC Germany for garages.

carburettor flanges • reservoirs / tanks • fuel pumps • camshaft adjusters • engine components • oil separators • air flow meters • secondary air pumps • idle control valves • oil sumps • throttle valves • lambda probes • oil coolers • crankshaft gears • idler pulleys, tensioning elements • timing chain sets • crankshaft pulleys • fuel tanks

Accessories and other

**Would you like a little less?**

Sometimes all you need is this or that and not necessarily a complete set, as is usually offered in the OE sector. Do you really need a new wiper arm including cap and blade or perhaps just the wiper arm itself? Do the motor and linkages need to be replaced or just one of the components? If the manufacturer permits it, we at AIC Germany have split the respective sets so that the spare parts can be ordered as required.

wiper linkages • wiper motors • wiper pumps • wiper nozzles • wiper arms • filters • mounting materials • o-ring screws • seals • lubricants

Electric mobility

A fascinating future.

Electrified by what's new

They're coming – and there are more of them every single day! Electric and hybrid vehicles are rapidly taking over the roads. Admittedly, not always as quickly as is the case in some of Europe's Nordic countries, where vehicles with internal combustion engines already play a lesser role. Nevertheless, the transition to electric vehicles is gaining momentum fast. This is why we at AIC Germany are dynamically adapting our range of spare parts to meet the needs of the market.

Stronger together.

Timing chain systems

iwis mobility systems

iwis
motorsysteme
wir bewegen die welt

iwis mobility systems, founded in 1916 by Johann Baptist Winklhofer, is a leading global supplier of high-performance drive chains, innovative chain drive systems, and powerful or even delicate solutions for customer-specific applications of all kinds „Made in Germany“. With their timing chain kits for original quality engine repair, iwis has created a solution to avoid the hassle of searching for all the individual parts. You have everything at hand with one click and additionally save time and money. The individual components are perfectly adjusted to each other.

**MADE IN
GERMANY**

Air suspension systems

Dunlop Suspension Systems

Dunlop Suspension Systems is the first and leading manufacturer in Europe to design, develop and produce complete original quality air suspension systems since 1950. At its purpose-built facility at Prologis Park in Coventry, England, components are not only designed and developed, but also tested in a sophisticated test procedure that simulates real-world environmental conditions. This ensures the quality and reliability of the components. The special feature of Dunlop's air suspension system is the „active system“. No manual adjustment is necessary after installation. The air spring components are controlled and managed by the system. Quite simply with Plug&Play.

MADE IN EUROPE

Lighting components

OLSAParts

OLSAParts has been a specialist in high-quality lighting components for cars and commercial vehicles for more than 70 years and is one of the most important automotive suppliers in the world. Olsa's headquarters are located in Rivoli (Turin), Italy. The qualified team of Olsa, consisting of more than 100 engineers, develops high-quality headlights, rear lights and small lights in OEM quality for well-known manufacturers and now also for the independent aftermarket.
