

Rabotti EUI/EUP tester

A well-established technology for the repair of Electronic Unit Injectors (EUI) and Pumps (EUP): The Rabotti IPC cambox!!

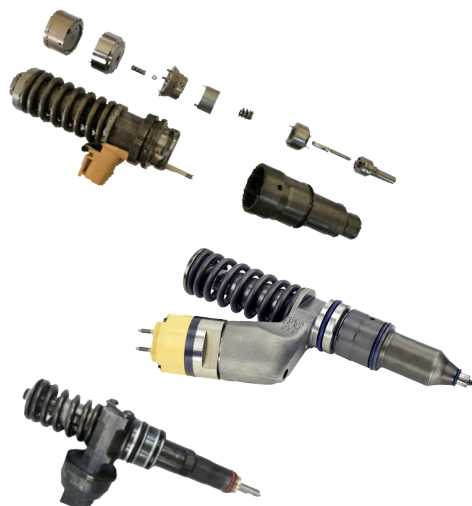

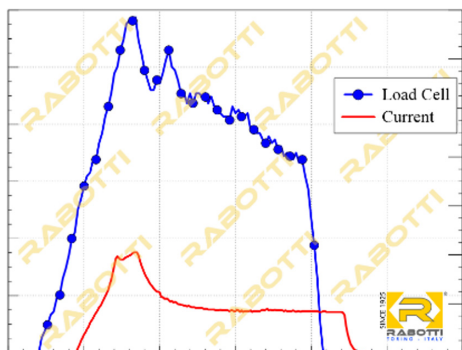

The IPC cambox is the solution proposed by Rabotti for the reliable and accurate testing of:

- Bosch EUI (VAG PDE, Scania, Cursors and more)
- Bosch EUP (Actros, Atego and more)
- Caterpillar EUI
- Detroit EUI
- Delphi EUP (DAF and more)
- Cummins Celect EUI
- Delphi EUI (Volvo, Land Rover and more)

This well-established technology is proposed in two solutions:

IPC300: the basic cambox already widespread on the market which ensures fast mounting of the EUI/EUP thanks to the provided mechanical kits and fast testing with BIP detection for Bosch injectors and peak pressure measurement for EUP.

IPC600: the most modern solution specifically designed to allow the application of the official testplan for Bosch EUI/EUP and the generation of the trim code for Delphi dual coil E3 injectors for Volvo applications.
