

# OTOMOBİL & HAFİF TİCARİ ARAÇ KATALOĞU

Passenger & Light Commercial Vehicle Catalogue

2022

Sektöründe,  
müşteri ilişkilerini güven ve  
memnuniyet temeli üzerine kurmuş olan SKT,  
sızdırmazlık ürünleri konusunda doğru ve güvenilir çözümler  
sunmaya devam etmektedir.

Yenilikçi ve mükemmeliyetçi gelecek vizyonu ile sektöründe zirvenin en güçlü  
oyuncularından biri olmayı başaran SKT, ürün gamına kattığı ürün çeşitleri iş ortaklarına her  
zamanki gibi üstün kalitede ürünler sunmayı amaçlamıştır.

SKT'nin ürün bilgilerine **TECDOC** katalog sisteminden ulaşabilirsiniz.

SKT, 2022 yılında da müşterilerine üstün kaliteye sahip ürünlerini, müşteri memnuniyeti odaklı hizmet, hızlı ve  
güvenilir teslimat prensibiyle sunarak yoluna emin adımlarla devam edecektir.

65 yıldır ailemizin bir parçası olan tüm değerli iş ortaklarımıza teşekkür ederiz.

---

Having established its customer relations based on trust and satisfaction, SKT  
continues to offer proper and reliable solutions for sealing products.

With its innovative and perfectionist vision of the future, SKT has managed to become one of the strongest  
players in the sector and aims to offer its business partners high-quality products.

SKT is a certified data supplier of TecAlliance.  
SKTs product portfolio is available at **TecDoc**.

SKT will continue on its way with firm steps by offering its customers high-quality  
products also in 2022 with the principle of customer-oriented services and fast and  
reliable deliveries.

We would like to thank all our valuable business partners who have been  
a part of our family for 65 years.

# MALZEME BİLGİLERİ / Material Information

| Malzeme Adı<br>Material                               | SKT Kodu<br>SKT Code | Kısa Kodu<br>Abbreviation | Çalışma Sıcaklığı<br>Operating Temp. | AÇIKLAMA                                                                                                                                                                                                                                                                                                                                                                                                       | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------|----------------------|---------------------------|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Nitril Kauçuk<br>Nitrile Rubber                       | -N                   | NBR                       | -40 / 105                            | Genel olarak fiyat / fonksiyon dengesi yüzünden tercih edilen ve düşük sıcaklıklarda kullanılabilen yağ ve greslere dayanıklı genel amaçlı bir keçe malzemesidir. Glikol esaslı fren yağları ve EP katkılı yağlara direnci zayıftır. Yakıtlar ve sanayi sıvıları için özel geliştirilmiş karışımları vardır. Otomotiv sektöründe aks keçelerinde büyük bir kullanıma sahiptir.                                 | It is an economical and general purpose sealing material and preferred due to being resistant against low temperature oil and grease. It has poor resistance to glycol based brake oils and oils with EP additives. There are specially developed mixtures of this material for fuels and industrial fluids. It has a great use in axle seals in the automotive industry.                                |
| Hidrojenenitril Kauçuk<br>Hydrogenated Nitrile Rubber | -H                   | HNBR                      | -70 / 150                            | Genel olarak Nitril kauçuk özelliklerini taşır. Nitril kauçuğa ilave olarak esneklik, hava direnci ve ozona dayanım gibi yüksek mekanik özelliklere de sahiptir. Yüksek mekanik dayanım gerektiren direksiyon sistemi ve aks gibi yerlerde kullanım alanı vardır.                                                                                                                                              | This rubber has similar characteristics to nitrile rubber, but it additionally has the mechanical features such as more flexibility, higher weather and ozone- resistance. It is used in applications where high mechanical strength is required such as steering systems, axles and so on.                                                                                                              |
| Florokarbon Kauçuk<br>Fluorocarbon Rubber             | -V                   | FKM                       | -30 / 220                            | Sıcaklığın ve yüksek devirin olduğu ortamlarda kullanılan bir kauçuktur. Gres, yakıt, yağ, çözücüler ve kimyasal maddelerin bir çoğuna dayanıklıdır. Fiyat yönünden pahalı bir malzeme olmasına karşın otomotiv sektöründe motor, şanzıman, diferansiyel gibi alanlar ile endüstriyel alanda uzun süre dayanım istenen makinalarda tercih edilir.                                                              | This rubber is used in high temperature and high rpm conditions. It is resistant to many types of grease, fuel, oil, solvent and chemicals. Despite being relatively expensive- compared to the other types of rubber materials, this material is employed in fields such as engine, gearbox, differential in automotive industry and also in industrial machines when long-term durability is needed.   |
| Poliakrilik<br>Acrylic Rubber                         | -P                   | ACM                       | -30 / 150                            | EP katkılı yağlara ve ozona dayanıklı bir malzemedir. Yakıt ve düşük sıcaklık dayanımı zayıf bir malzemedir. Otomotiv sektöründe özellikle şanzıman ve diferansiyel keçelerinde yoğun olarak kullanılır.                                                                                                                                                                                                       | This rubber has good resistance to oils with EP additives and ozone. Resistance to fuel and low temperature of this material is somewhat inferior. It is used in gearbox and differential seals in automotive sector.                                                                                                                                                                                    |
| Silikon Kauçuk<br>Silicone Rubber                     | -S                   | VMQ                       | -60 / 225                            | Çok iyi bir motor keçesi malzemesidir. Esneklik, hava direnci ve ozona dayanımı yüksektir. Ancak haSS-RLas bir malzeme olduğu için kolayca yırtılabilir, deforme olabilir. Bu nedenle yüksek mekanik dayanım gerektiren ortamlarda ve yakıtlarda EP katkılı yağlarda kullanılması önerilmez.                                                                                                                   | This rubber is an excellent material for engine seals. In addition to flexibility, its weather and ozone resistance is very high. Yet, it is prone to wear-tear and deformation due to being a very sensitive material. Therefore, it is not recommended in conditions where oils with EP additives are used and high mechanical strength is required.                                                   |
| Etilen Propilen Kauçuk<br>Ethylene-Propylene Rubber   | -E                   | EPDM                      | -60 / 150                            | Glikol esaslı fren yağları, ozona, su buharına, fosfat ester akışkanlara direnci iyidir. Yakıtlarda ve petrol esaslı yağlara direnci düşüktür.                                                                                                                                                                                                                                                                 | This rubber has good resistance to glycol based brake oils, ozone, water vapor, phosphate ester fluids whereas it has low resistance to fuels and petroleum based oils.                                                                                                                                                                                                                                  |
| Stiren Butadien Kauçuk<br>Styrene-Butadiene Rubber    | -R                   | SBR                       | -50 / 100                            | Glikol esaslı fren yağları, asit ve bazlara alkol direnci iyidir. Genel olarak araçların fren sistemlerinde kullanılır. Yakıtlarda ve petrol esaslı yağlara direnci düşüktür.                                                                                                                                                                                                                                  | This rubber has good resistance to glycol based brake oils, acids and bases. It is generally used in brake systems of vehicles. It has low resistance to fuels and petroleum based oils.                                                                                                                                                                                                                 |
| Tabii Kauçuk<br>Natural Rubber                        | -T                   | NR                        | -60 / 90                             | Stiren Butadien kauçuk ile benzer özellikler gösterir. Araçların süspansiyon sistemleri gibi ozona direnç , yüksek esneklik ve mekanik dayanım gerektiren yerlerde kullanılır.                                                                                                                                                                                                                                 | This rubber has similar features to styrene-butadiene rubber. It is used in areas like vehicle suspension systems where ozone resistance, high flexibility and high strength is required.                                                                                                                                                                                                                |
| Politetrafloroetilen<br>Polytetrafluoroethylene       | -F                   | PTFE                      | -260 / 260                           | Bilinen tüm kimyasallara dayanıklı bir plastik malzemedir. Sürtünme katsayısı en düşük katı bir maddedir. Yapışma özelliği göstermeyen yağlamasız bir yatak malzemesidir. Uygulama alanına göre dolgu yapısı değiştirebilir. Son yıllarda çok tercih edilen bir motor keçe malzemesidir.                                                                                                                       | This is a material which is resistant to all known chemicals. It has the lowest coefficient of friction of any solid material. It is a non-adhesive bearing material without lubrication. Filling composition of PTFE may change depending on the field of use. This material is highly preferred in engine seals recently.                                                                              |
| Poliamid<br>Polyamide                                 | -C                   | PA                        | -20 / 90                             | Piyasa da "Naylon" olarak bilinir. Sürtünme ve aşınma gibi mekanik özellikleri iyidir. Yağlara, yakıtlara, esterlere, ketonlara karşı dirençlidir.                                                                                                                                                                                                                                                             | Also known as nylon, this material has high friction, wear resistance and good mechanical features. It is also resistant to oils, fuels, esters and ketones.                                                                                                                                                                                                                                             |
| Termoplastik Poliüretan<br>Thermoplastic Polyurethane | -L                   | TPU                       | -40 / 90                             | Özellikle esneklik, aşınma ve sürtünme gibi yüksek mekanik özelliklerine sahip bu malzeme yağlara, greslere ve birçok çözücüye göre de dirençlidir. Kullanım yeri kirli ve aşındırıcıların yoğun olduğu ortamlarda kullanılan kombi keçelerin yağ dudaklarını koruyucu malzeme olarak kullanılır. Git-gel harekete sahip ortamlarda da sızdırmazlık malzemesi olarak kullanılır.                               | In addition to good mechanical features such as high flexibility, high wear and friction durability, this rubber is resistant to oils, greases and many solvents. It is used as a protective material in sealing lips of combi seals which are employed in areas that contains highly dirty and abrasive particles. It is used as sealing material where back and forth axial movement is performed.     |
| Etilen Akrilik Kauçuk<br>Ethylene Acrylic Rubber      | -AE                  | AEM                       | -30 / 150                            | Yüksek ısı ve ozon direncine sahip olan AEM kauçuk , motor yağları, şanzıman sıvıları, asidik kondensatlar, üre çözeltileri, soğutucu sıvılar ve gresler gibi sıvılara dayanır. Düşük sıcaklıkta esnekliği, yüksek çekme dayanımı özellikleri ile elektrikli ve hibrit araç bileşenleri dahil olmak üzere zorlu otomotiv uygulamalarında çalışan sızdırmazlık elemanları ve grometlerin üretiminde kullanılır. | AEM rubber which has high heat and ozone resistance, withstands fluids such as engine oils, transmission fluids, acidic condensates, urea solutions, coolants and greases. With its low temperature flexibility, high tensile strength properties, it is used in the manufacture of seals and grommets that work in demanding automotive applications, including electric and hybrid vehicle components. |

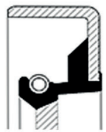

# TİP AÇIKLAMALARI / Type Descriptions

| Profil Tipleri / Profile Type                                                      |                                                                                     |                                                                                     | AÇIKLAMA                                                                                                                                                                                                                                                                                                                                                                                                                                      | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   |    |    | Dış çapları kauçuk kaplıdır. Bazı tiplerinde montaj kolaylığı ve yuvadaki deformasyon kaynaklı sızdırmalara karşı dış çaplarında tırtıl vardır. Ayrıca bazı tiplerinde de kirliliği ortamlarda koruyuculuk sağlayan toz dudak ilave edilmiştir. Isıl genleşme katsayısı yüksek, parçalı, yüzey pürüzlülüğü yüksek ve eksenli kaçık yuvalarda da kullanılabilirler.                                                                            | Outer surfaces are rubber coated. Some types also have grooves on the outer layer in order to ease installation process and to act against leakages caused by the deformities in the housing bore. Furthermore, some types have dust lip for preventing dirt ingestion. They can be used in spaces consisting of materials with high coefficient of expansion and in divided spaces with a centre offset.                                                                             |
|    |    |                                                                                     | Dış çapları metal kaplıdır. Yuvalarına sıkı geçerler. Isıl genleşme katsayıları yüksek metal (alüminyum gibi) yuvalarda ve parçalı yuvalarda kullanılması önerilmez. Bazı tiplerinde kirliliği ortamlar için koruyuculuk sağlayan kullanılan toz dudak ilave edilmiştir.                                                                                                                                                                      | Outer surfaces are metallic. These seals are in interference fitting contact with the housing. Use of these types are not recommended in spaces with high coefficient of expansion (e.g. aluminium) and in divided spaces with a centre offset. Some types also have the secondary dust lip to exclude contaminants.                                                                                                                                                                  |
|    |    |    | Genel olarak L3 ve L1 kombinasyonuna sahip keçe tipleridir. Dış çaptaki sac bölge merkezleme ve sıklığı sağlarken kauçuk bölge ise kauçuk bölüm ise yuvadaki sızdırmazlığı sağlar. Isıl genleşmelerden az etkilenen modern bir dış tasarıma sahiptirler.                                                                                                                                                                                      | In general, these seal types are a combination of types L1 and L3. On the outer diameter, metallic surface helps in centering while rubber surface provides sealing in the housing. They have a modern design that is affected less by thermal expansion.                                                                                                                                                                                                                             |
|    |    |                                                                                     | L1 keçe tiplerinin tüm özelliklerini taşımalarının yanında büyük çaplı montaj kolaylığı sağlarlar. Yapısal olarak montaj hatalarına karşı daha dirençlidirler. İç taraftaki bilezik keçeye büyük bir mukavemet sağlarken rulmanlardan gelen yağ jetlerini de karşılayarak keçe dudagının sağlıklı çalışmasını sağlarlar.                                                                                                                      | In addition to all features of type L1, these seals offer ease of assembly in large diameters. They are also quite resistant structurally against assembly errors. Inner ring enhances the structural strength of the seal, while also acts as a shield against oil jets to help sealing lip to function healthily.                                                                                                                                                                   |
|    |    |    | Standart yağ keçeleri 0,5 bar'a kadar çalışabilir. Bu tip keçeler daha yüksek basınçta çalışabilmesi için sac ve dudak profili özel tasarlanmıştır. Bu tip keçelerin verimli çalışabilmesi için ortam şartları, keçenin profili, dudak malzemesi, mil çapı ve devir sayısı önemlidir. Bu keçeler tasarıma da bağlı olmak üzere 5 bar'a kadar çalışabilirler.                                                                                  | Standard oil seals can operate at pressures up to 0,5 bar. Steel case and lip seal profiles of these seals, however, are designed specially in order to obtain the desired resistance against higher pressure values. In order these types of seals to run efficiently ambient conditions, design of the lip seal profile, lip material, shaft diameter and the rpm parameters are significant. Depending on the design, these seals can operate at pressures up to 5 bar.            |
|    |    |                                                                                     | Bu tip keçeler genel olarak gres ve yağ buharı ve tozlu ortamlar için kullanılır. Yay kullanılmadığı için sıvı sızdırmazlığına karşı kullanılmazlar. Bazı uygulamalarda mil kazıyıcı olarak da kullanılabilirler.                                                                                                                                                                                                                             | These types of seals are mainly used for sealing grease, lubricant steam and dust. Since there is no garter spring, they cannot be used for fluid sealing. In some applications, they can be employed as shaft wipers as well.                                                                                                                                                                                                                                                        |
|   |   |                                                                                     | Birbirine bağlı olarak çalışan hareketli iki parçadan meydana gelirler. Dış taraf yuvaya, iç taraf ta mile sıkı geçerek çalışır ve sızdırmazlık mekanizması iki parça arasında garter yayına sahip sızdırmaz dudak ile kurulmuştur. Standart keçelere göre çok daha yüksek koruyuculuk sağlarlar. Genel olarak yüksek kirlilik ve yük altında çalışan traktör ve ağır vasıtaların akslarında kullanılırlar.                                   | Cassette seals consist of two moving parts that operate in conjunction with each other. Outer ring is in interference fitting contact with the housing and the inner ring with the shaft, while the sealing mechanism is established with main lip with a garter spring in between these rings. Cassette seals are highly rigid and protective and therefore used for very heavy-duty and in dirty environments, like commercial vehicles, tractors and agricultural machinery.       |
|  |  |                                                                                     | Kombi keçeler yüksek koruyuculuğa ihtiyaç duyulan aşırı kirliliği ve aşındırıcı maddeler bulunan ortamlar için tasarlanmış keçe tipleridir. Genelde çift yaylı bir kauçuk sızdırmaz dudaklar ve aşınmaya dayanıklı plastik bir parça ile kombine çalışır. Özellikle aşırı kirliliği ortamlarda çalışan traktör aksları ve mekanik dayanım gerektiren direksiyon sistemlerinde kullanılırlar.                                                  | Combi seals are designed for extreme wear applications that require high resistance. Generally, two sealing lips with garter spring and an additional wear-resistant plastic part are operating together under the roof of one metal case. They are employed in tractor axles that work under extremely dirty conditions and in steering systems that require mechanical strength.                                                                                                    |
|  |  |  | Sürtünme katsayılarının düşük olması nedeniyle son yıllarda sıkça kullanılan motor keçesi tipleridir. Kullanıldığı motorlara düşük emisyon ve minimum güç kaybı avantajı sağlarlar. Standart keçelere göre dış çapları aynı özellikleri taşırlar ancak sızdırmaz dudaklar mile daha geniş bir noktada temas ederler ve mil kalitesi ve montaj yönünden daha hassaslar çalışır. Bazı tiplerinde toz dudak olarak non-woven malzeme kullanılır. | Due to low coefficient of friction they have, these seals are being used as engine seals more often in the recent years. The advantage of them are low emission and low power loss that they provide. Outer surfaces have the same features, however main sealing lips have bigger contact area in comparison to standard seals. Therefore shaft surface quality and installation accuracy plays a big role in sealing performance. Some types have a dust lip of non-woven material. |
|  |  |  | Yeni nesil motorların daha verimli enerji kullanımı ve düşük emisyon değerleri beklenmektedir. Bu ETS tip keçeler düşük sürtünme, uzun ömür ve yüksek performans sağlayan yapısı sayesinde bu motorlarda rahatça kullanılabilir. Yaysız ve mile çok noktadan temas eden bir dudak yapısına sahiptirler. Yeni nesil düşük viskoziteli motor ve şanzıman yağları ile beraber yüksek performansta çalışırlar.                                    | New generation engines are expected to offer more energy efficiency and low emission values. These ETS type seals are great fit for these engines since they provide features such as low friction, long service life and high performance. These seals are spring-less and in contact with the shaft at many points. They operate at high performance with new generation low viscosity engine and transmission oils.                                                                |

# KEÇE TİPLERİNDE KULLANILAN HARF KODLARININ AÇIKLAMASI

## Explanation Of Letter Codes Used In Seal Types

| Sembol / Symbol | Açıklama                                                                       | Örnek Kullanım / Exemplary Usage | Symbol | Description                                      | Usage example |
|-----------------|--------------------------------------------------------------------------------|----------------------------------|--------|--------------------------------------------------|---------------|
| B               | Basınca dayanıklıdır.                                                          | L3B                              | B      | Pressure resistant.                              | L3B           |
| C               | Dudak keçe yüksekliğinden daha yüksektir. (1)                                  | L3C                              | C      | Lip height is higher than the seal height.       | L3C           |
| C               | Keçe dıştan dudaklı ve çevreden çalışmaktadır. (2)                             | CL3                              | C      | Seal with outside lip, works from periphery.     | CL3           |
| ETS             | Düşük sürtünmeli ( Yaysız ) dudak yapısına sahiptir.                           | SC ETS                           | ETS    | Seal without spring, low friction lip structure. | SC ETS        |
| F               | PTFE malzeme kullanılmıştır.                                                   | SP F                             | F      | PTFE material is used.                           | SP F          |
| K               | Yün malzeme kullanılmıştır. (Non Woven-NW)                                     | F2TK - NW                        | K      | Wool material is used. (Non Woven-NW)            | F2TK          |
| L               | Kauçuk malzeme kullanılmıştır.                                                 | L1, L3                           | L      | Rubber material is used.                         | L1, L3        |
| L               | Toz dudaklıdır. (3)                                                            | L3L, L1L                         | L      | With dust lip.                                   | L3L, L1L      |
| LL              | Toz dudağı iki tanedir.                                                        | L3LL                             | LL     | With two dust lips.                              | L3LL          |
| R               | Alından çalışan bir dudağa sahiptir.                                           | L3R                              | R      | With sealing lip on the front face.              | L3R           |
| T               | Keçe dış yüzeyi tırtıllıdır.                                                   | L3TL                             | T      | Outer surface grooved.                           | L3TL          |
| SAĞ             | Sağa dönen miller içindir.                                                     | L3L SAĞ - L3L RIGHT              | RIGHT  | For right-hand rotating shafts.                  | L3L RIGHT     |
| SOL             | Sola dönen miller içindir.                                                     | L3L SOL - L3L LEFT               | LEFT   | For left-hand rotating shafts.                   | L3L LEFT      |
| SS              | Her iki yöne de çalışan tırtıl yapısına sahiptir.                              | L3L SS - L3L RL                  | RL     | For bi-directional shafts.                       | L3L - RL      |
| SC              | Kaset tipi keçedir.                                                            | SC1                              | SC     | Cassette type seal.                              | SC1           |
| SP              | Standart tiplerden farklı olup, Özel tip tasarımına sahiptir. ( Spesiyal ) (4) | SPL3                             | SP     | Special design, different from standard types.   | SPL3          |
| X               | Çift yay ve çift yağ dudağa sahiptir.                                          | L3X                              | X      | With two lips and two springs.                   | L3X           |

(1) : Eğer tip tanımının sonunda ise

(2) : Eğer tip tanımının başında ise

(3) : Başa yazılırsa dudak içe doğru sona yazılırsa dudak dışa doğrudur.

(4) : Profil şekli konusunda dikkatli olunmalıdır.

Özel tasarıma sahip olan keçelerde detaylı bilgi için SKT'ye başvurulmalıdır.

(1) : If it is at the end of type definition

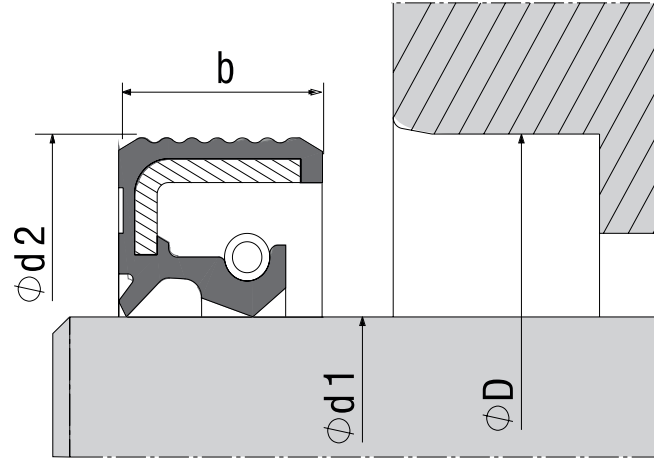

(2) : If it is at the beginning of type definition

(3) : Has an inward lip if it is at the beginning; has an outward lip if it is at the end.

(4) : Profile geometry is to be taken into account carefully.

For detailed information on shaft seals with special design, please consult SKT.

# KEÇE ÖLÇÜLENDİRME SİSTEMİ / Seal Dimensioning System

|    |                     |
|----|---------------------|
| d1 | Mil Çapı            |
| D  | Yuva Çapı           |
| b  | Keçe Yüksekliği     |
| d2 | Keçe Dış Çapı       |
| d1 | Shaft Diameter      |
| D  | Housing Diameter    |
| b  | Seal Height         |
| d2 | Seal Outer Diameter |

| Metrik Keçelerin<br>Ölçülendirilmesi<br>Dimensioning of<br>metric seals | d1                                                     | x | D                                                         | x | b                                                  |
|-------------------------------------------------------------------------|--------------------------------------------------------|---|-----------------------------------------------------------|---|----------------------------------------------------|
|                                                                         | 30                                                     | x | 45                                                        | x | 8                                                  |
|                                                                         | Keçenin çalıştığı<br>mil çapıdır.<br>(Shaft diameter.) |   | Keçenin çalıştığı<br>yuva çapıdır.<br>(Housing diameter.) |   | Keçenin toplam<br>yüksekliğidir.<br>(Seal height.) |

Metrik ölçülü keçelerde D ölçüsü, keçenin çalışacağı yuva çapıdır.  
Keçe dış çapı bu yuvada yeterli sıkılığı sağlayacak şekilde büyük üretilmiştir.

In metric system, dimension "D" is the housing bore diameter.  
Seal outer diameter is specified accordingly to provide the required interference.

|                                                                           | 3"                                                     | x | 4"                                                                                                                       | x | 15/32"                                             |
|                                                                           | Keçenin çalıştığı<br>mil çapıdır.<br>(Shaft diameter.) |   | Keçenin dış çapıdır.<br>Yuva çapı daha küçük olmalıdır.<br>(Seal outer diameter. Housing<br>diameter has to be smaller.) |   | Keçenin toplam<br>yüksekliğidir.<br>(Seal height.) |

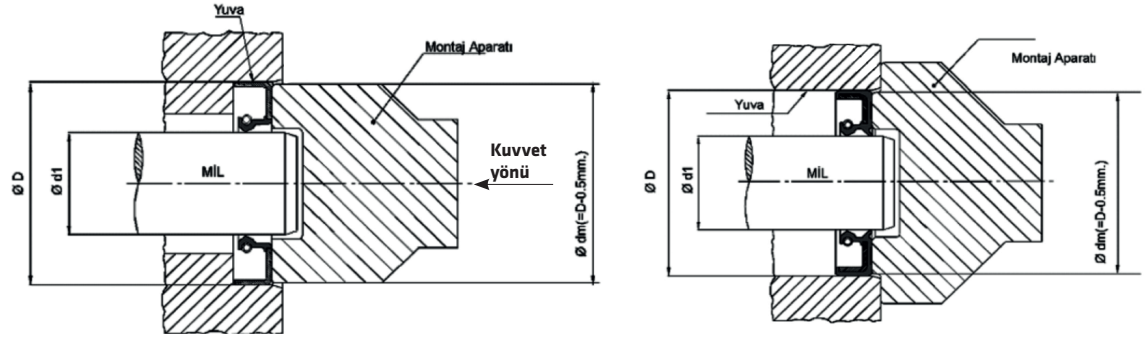

Inch ölçülü keçelerde, d2 ölçüsü keçenin dış çapıdır.  
Yuva çapı, keçe dış çapından gerekli sıkılığı sağlayacak kadar küçük olmalıdır.

In imperial system, dimension "d2" is the seal outer diameter.  
Housing bore diameter has to be less than seal outer diameter to provide the required interference.

# YAĞ KEÇESİ GENEL MONTAJ KURALLARI

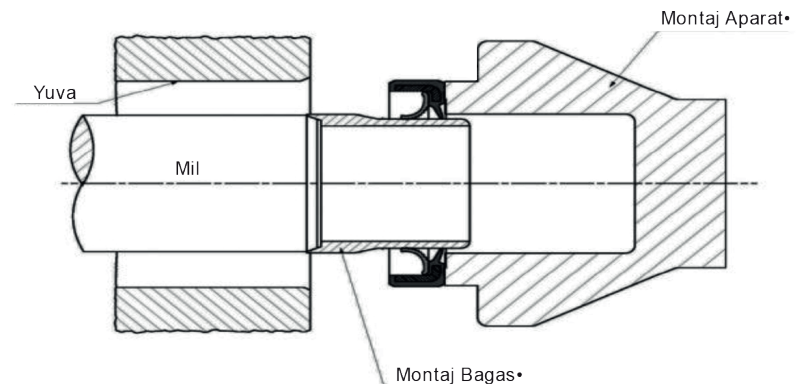

## A. KAUÇUK DUDAKLI KEÇELER

1. Mil ve yuva; ölçüsel tolerans standartlarına uygun - hasarsız ve temiz olmalıdır.
2. Kauçuk malzemeli keçelerin dudakları montajdan önce ortam yağı ile yağlanmalıdır.
3. Keçe montajında uygun bir aparat kullanılmalıdır, kesinlikle çekiç kullanılmamalıdır.
4. Yay boyları kısaltılmamalıdır. Kısaltılırsa; aşırı sürtünmeden dolayı dudak ve mil hızlı bir şekilde aşınır.
5. Keçe dudağındaki sağ-sol helisel dönüş yönüne dikkat edilmelidir.
6. Kaset ve ABS tipli keçeler yapısal olarak çok hassas bir çalışma sistemine sahip olduğu için montaj sırasında keçenin metal kısmı üzerinde hasar bırakacak darbelerden kaçınılmalı ve aparat kullanılmalıdır.
7. Montajdan sonra keçenin salgısı kontrol edilmelidir.
8. Yuva çok bozuk değilse sıvı conta kesinlikle kullanılmamalıdır.

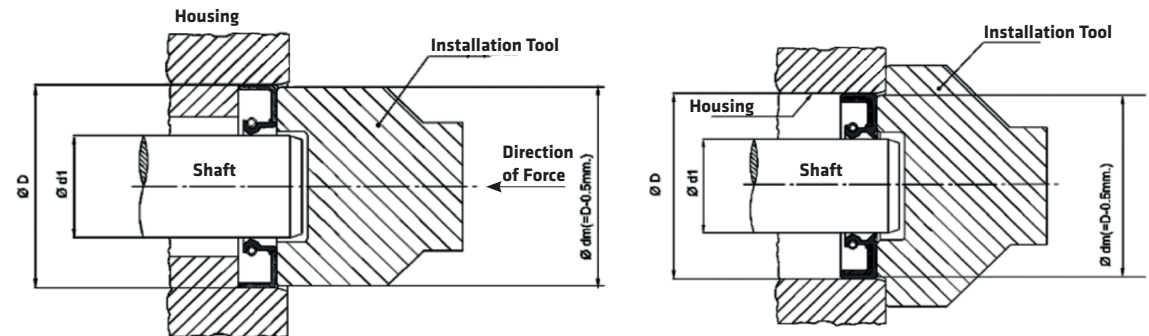

## B. PTFE DUDAKLI KEÇELER

1. PTFE malzemeler mekanik olarak dayanımları zayıf olduğundan kesinlikle hasar görmemeli, mil yüzeyi uygun olmalıdır. PTFE dudağa kesinlikle el ile dokunulmamalı, metal bir madde değmemelidir.
2. Uygun bir aparat yardımı ile montaj yapılmalı çekiç kullanılmamalıdır.
3. PTFE keçeler, keçe üzerinde gelen plastik бага ile birlikte yuvaya yerleştirilmeli ve montaj işlemi bitince plastik бага yerinden çıkarılmalıdır.
4. PTFE malzemeli keçelerin dudakları kesinlikle yağlanmamalıdır. PTFE malzemesinin sürtünme katsayısı çok düşük olduğu için kuru çalışabilme özelliğine sahiptir. PTFE keçenin dudakları yağlanır ise ortamda bulunan her türlü aşındırıcıları mil ile dudak arasına toplayacağı için mekanik aşınmadan dolayı keçelerin ömrü kısa olur ve yağ kaçağı oluşabilir.
5. Montaj'dan sonra keçenin ölçüsel değerlerine ulaşabilmesi için motor, en az 4 saat sonra çalıştırılmalıdır. Eğer motor daha erken çalıştırılır ise keçe ölçüsel olarak gerçek boyutlarına ulaşılmağı için yağ kaçıır.

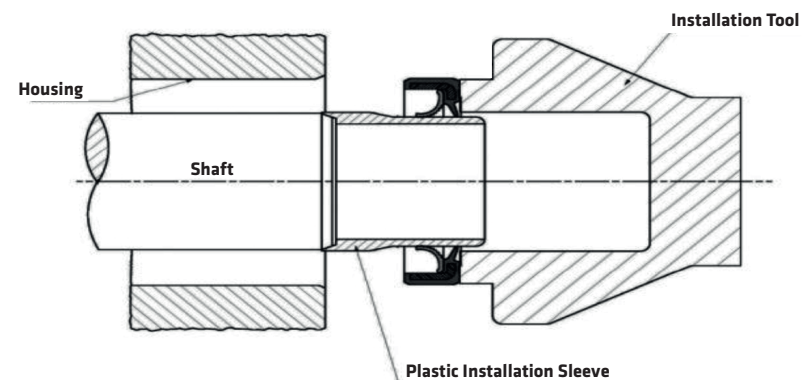

## A. ELASTOMERIC LIP SEALS

1. Shaft and housing need to be clean, undamaged and dimensionally appropriate.
2. Elastomeric lip seals are to be lubricated with the ambient oil before installation.
3. A special installation tool is to be employed and never a hammer.
4. Garter springs are never to be shortened. (Shortened springs cause excessive tightness and eventually more wear of shaft and seal.)
5. Direction of the helical ribs on the sealing lip is to be taken into account.
6. When installing cassette and ABS type seals, hammering metal cases is to be avoided in order to prevent damaging blows, since those seals are very sensitive.
7. Seal runout is to be checked after the installation.
8. Gasket sealant is not to be used unless the housing is very defective.

## B. PTFE LIP SEALS

1. Due to being weak in terms of mechanical strength, PTFE lip seals are to be kept from any damages and shaft surface is to be superior. PTFE lip is never to be in contact with hand or metal object.
2. A special installation tool is to be employed and never a hammer.
3. PTFE lip seal installation is to be done with the plastic installation sleeve that comes with the product. Installation sleeve is to be removed after the installation.
4. PTFE lips are not to be lubricated. (PTFE material is suitable for dry running due to its very low coefficient of friction. In case of lubrication, majority of the ambient abrasives are drawn into the lubricant in between the lip and the shaft and this could potentially result in wear and eventually leakage.)
5. Do not start the engine sooner than 4 hours after installation. This permits the new sealing lip to adapt perfectly to the shaft.
