EKU

Since EKU foundation in 1962, EKU has gained considerable expertise in brake drum, brake disc and brake pad production and combined this experience with the latest technology successfully.

High-Tech brake drum and brake disc production facilities and Total Quality Concept have established a well-recognized brand name EKU on the original equipment (OEM) and replacement markets both in Turkey and overseas.

Committed to Total Quality Concept and sensitive approach to environmental issues have been certified with ISO 9001:2015, IATF 16949:2016, TS ISO/IEC 27001:2013 and quality certificates by DQS and BS OHSAS 18001:2007, ISO 50001:2011, ISO 14001:2015 by TUV.

The new plant combined with EKU's innovative approaches to customer demands and superior quality products, will sustain EKU's name as "a preferred brand name" in the global market. EKU will always remain as, Your Best Friend In Security.

PRODUCTION

With 150,000 tonnes of melting capacity and 2,000,000 pieces of machining capacity, we rely on our 60 years of experience.

FOUNDRY

With 150,000 tonnes of casting capacity, customer requests, including melting, casting, machining and packaging, are satisfied from a single center by means of the state-of-the-art equipment using the latest technology.

Nodular cast iron and gray cast iron parts for automotive, rail systems, agricultural and heavy equipment machinery sectors are manufactured by way of a lean manufacturing technique.

It is the first foundry to receive an environment award, thanks to its clean foundry, environmental awareness and sustainable projects, as it shapes the sector adopting a sense of sensitivity to the environment.

MACHINING

The Machining Department is designed to machine the brake drums, brake discs and all other casted parts, with a capacity of 2,000,000 pieces a year.

PACKAGING

Pre-shipment washing and lubrication is carried out at the packaging department in accordance with customer requests, along with the pallet and packaging processes as per the applicable customer standards.

We are the only company to hold ECE R90 certificate In Turkey.

It has become compulsory to satisfy the minimum standards set out in ECE R90 legislation, for the disk brakes and brake linings, in all heavy commercial vehicles manufactured and sold to the European market.

EKU, once again, proved the importance it attaches to the quality and development upon the ECE R90 certificate, by leading the implementation of ECE R90 regulation, in an attempt to increase the road and vehicle safety.
