

GLASS SCRATCH REMOVAL

GlasWeld 

Scratched glass? Meet the Max.

With the Gforce Max, distortion-free glass scratch removal is not only possible—it's also amazingly simple.

Why Glass Scratch Removal?

CUT COSTS

Is it worth removing a scratch instead of just replacing the glass? Consider the 2.5 Rule: It normally costs 2.5 times the original cost of goods to replace a piece of glass. Why replace when you can save?

SAVE TIME

Waiting on replacement glass or using an outdated scratch removal system costs you valuable time. The Gforce Max scratch removal system allows you to remove most scratches distortion-free in just minutes.

KEEP CUSTOMERS

With every rescheduled appointment and delayed delivery, you lose future customers and damage your reputation. Keep your customers happy and your reputation strong by fixing scratches on the spot.

Gforce Max Advantages

With a built-in water feed, ergonomic grip, and self-leveling backer pad, even beginners can use the Max to remove scratches in just minutes. From windshields to skyscrapers, Gforce is the go-to choice for pros all over the world.

READY FOR ANYTHING

The Max can tackle just about any type of scratch. From handling rubs to razor blade cuts to graffiti, the Max can remove most scratches in minutes.

EASY TO LEARN

The Max eliminates the learning curve. With GlasWeld's training videos, beginners are just two minutes away from successfully removing scratches.

DISTORTION-FREE

Anyone who says distortion-free isn't possible hasn't met the Max. Our One-Step Technique doesn't remove any glass from the surface.

CLEAN

Most scratch removal systems create a mess so big that it's not worth the hassle. In conjunction with the Splash Guard, the Max minimizes splatter and keeps your area tidy. No need to stress about cleanup.

TYPES OF GLASS: LAMINATED / TEMPERED / ANNEALED / MIRROR
