# PRODUCT

## QUALITY AND EXPERTISE

First established in the UK by PSA Group (Peugeot / Citroën), and now part of the Comline Group, Motaquip's commitment to OE-matching quality has always been integral to our philosophy.

Thanks to our uncompromising approach to exacting standards, automotive professionals have come to associate Motaquip with reliable parts, perfect for a first-time-fit.

Every single product that comes into the Motaquip range has been designed, sourced, and tested to surpass customer expectations. Each new part given a comprehensive inspection and a final Motaquip seal of approval before it is made available to our customers.

Motaquip partners exclusively with world-class manufacturers that demonstrate the engineering processes required to deliver to our exacting brand standards.

Motaquip prides itself on its delivery proposition and our hubs in the UK, Ireland, Greece & Spain work around the clock to efficiently service our Global customer network.

Our industry and commercial expertise means customers have access to the products the market demands today.

Order several product groups from one supplier thanks to our comprehensive product portfolio.

# RANGE OVERVIEW

The composition of our diverse range of products is overseen by some of the most knowledgeable and experienced Product Managers in the business.

As a result, Motaquip is quick to market with the latest product introductions, ensuring that our customers have early access to the next generation of fast-moving parts.

## VEHICLE COVERAGE

- Passenger Car
- Light Commercial Vehicle
- Internal Combustion Engine
- Hybrid
- Electric Vehicle
- All Makes

### Engine

Drive Belts, Timing Belt Kits

### Cooling

Radiator Caps, Thermostats, Water Pumps

### Servicing

- Engine Oil
- Transmission Oil/Fluids
- Air Filters
- Cabin Filters
- Fuel Filters
- Oil Filters
- Wiper Blades
- Spark Plugs
- Glow Plugs

### Transmission

- CV Boots
- Wheel Bearings
- Wheel Hubs

### Braking

- Brake Pads
- Discs
- Calipers
- Wheel Cylinders
- Hoses
- Fitting Kits
- Cables

### Electrical

- Batteries
- Spark Plugs
- Glow Plugs
- Ignition Components
- Engine Management Components

### Steering and Suspension

Ball Joints, Drag Links, Rack Ends, Stabiliser Links, Bushes, Suspension Arms, Tie Rod Ends, Top Strut Mounting Kits, Steering Rack Gaiters

### Workshop Essentials

- Anti-Freeze
- Brake Fluid
- Screenwash
- Absorbent Granules
- Engine Additives
- Engine Cleaners
- Greases
- Carpet Mats
- Seat Protectors
- Personal Protection Equipment

# THE CHOICE OF MECHANICS FOR GENERATIONS

Since Motaquip's inception in 1981, the World has changed dramatically, but the legacy of trust built by Motaquip remains constant.

Over four decades on, Motaquip's commitment to quality remains central to our philosophy, and our brand continues as a symbol of trust for generations of mechanics.

# 40 YEARS AND COUNTING

# MARKETING

Motaquip supports its aftermarket customers with a range of diverse marketing and promotional material.

Central to this activity is our customer marketing portal where Motaquip partners can access and order materials at the touch of a button. The Motaquip brand is also building its presence on social media with engaging brand content posted frequently across Facebook, Instagram, and LinkedIn.

**Follow us!**  
on social media

# BRAKING COMPONENTS

At the core of the Motaquip product offering is a truly exceptional range of braking components.

Quality is paramount with each part meticulously developed and carefully manufactured for superior performance.

- Brake Pads
- Coated Discs
- Calipers
- Brake Cables
- Wheel Cylinders
- Brake Hoses
- Wear leads
- Brake Pad Fitting Kits

## WHY CHOOSE MOTAQUIP BRAKING?

- Brake pads manufactured in Group production facilities.
- Complete ECE R90 certification (where required).
- Coated discs feature a specialised anti-corrosion coating.
- Brand-new caliper units with no remanufacturing or surcharges
- Competitive warranty on all products.

# BRAKE PADS IN FOCUS

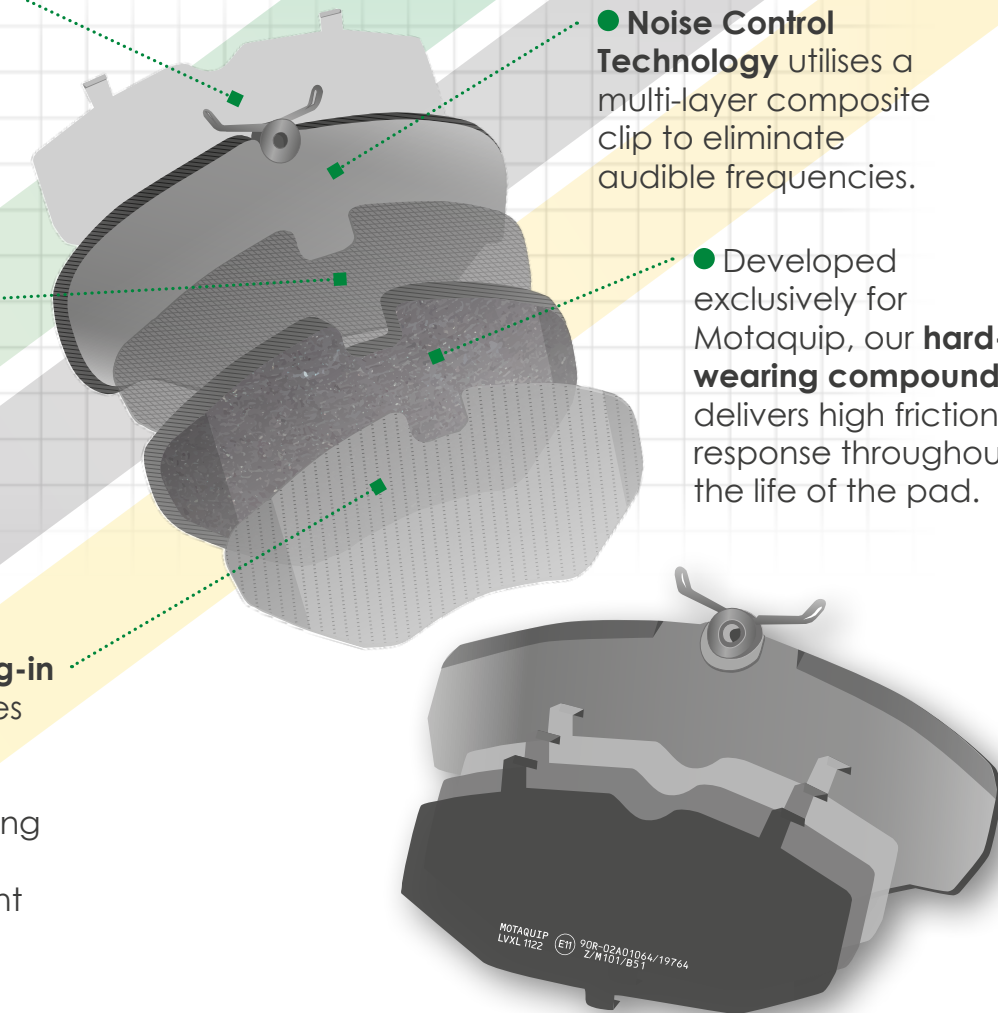

● Brake pad back plates are precisely engineered from **high grade steel** to integrate perfectly with the brake caliper.

● **Super-strength adhesives** and a **prolonged bonding process** means superior shear resistance and reduces the risk of scoring.

● Our **MTEC bedding-in compound** impresses from the very first moment the brakes are applied, providing optimum stopping performance straight out of the box.

● **Noise Control Technology** utilises a multi-layer composite clip to eliminate audible frequencies.

● Developed exclusively for Motaquip, our **hard-wearing compound** delivers high friction response throughout the life of the pad.

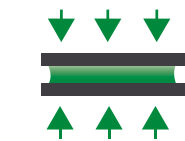

## QUALITY TESTING

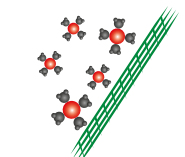

Motaquip brake pads are meticulously tested for ECE R90 certification, but we go beyond these requirements with a series of additional performance tests.'

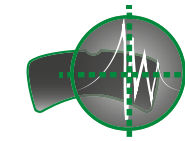

**Temperature testing** ensures our pads won't weaken, even after repeated exposure to extreme heat.

**In order to deliver consistent performance in demanding situations**, our pads are tested for tensile strength.

**Salt spray corrosion testing** ensures no materials will react or deteriorate to salt spray, even at high temperatures.

**Extensive vibration testing** ensures audible vibrations are eliminated for smooth, silent performance.

# FILTRATION

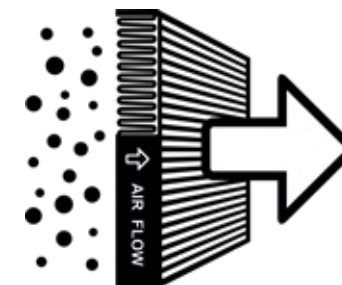

Constructed from premium quality materials to ensure longevity and effectiveness, Motaquip filters achieve greater efficiency levels in air and fluid movement.

With over 40 years experience in filtration supply, Motaquip identified at an early stage the importance of ensuring and maintaining peak performance levels.

By using the same materials and technologies as original equipment, our filtration systems not only optimise vehicle performance but protect vehicle occupants from harmful pollutants. Central to their effectiveness is the quality of their construction and filter media.

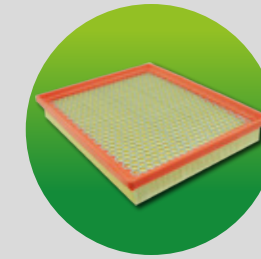

## WHY CHOOSE MOTAQUIP FILTERS?

- Motaquip's OE matching credentials are underpinned by rigorous benchmarking
- Made in cutting-edge facilities leading the market
- Premium quality filter media is harnessed to maximise filtration capacity
- In-house testing and Quality Lab analysis ensures superior performance

## MOTATIP💡

Cabin filters can have a significant effect on the health of drivers and passengers – especially those with asthma and/or allergies. Our filter media ensures a range of contaminants are kept out of vehicles.

### AIR

Oxidising just one litre of fuel requires 10,000 litres of air – which is why the high grade compact materials in Motaquip filters is so important. Unfiltered air can lead to a wide range of unwanted combustion deposits within engines.

### OIL

Our oil filters offer a robust, long lasting defence from engine wear, as they're specifically designed to capture combustion deposits. As oil temperature fluctuates dramatically, consistent media performance across the thermal spectrum is vital.

### FUEL

Modern fuel systems need both extreme pressure and delicate precision. Our filters ensure even the most demanding engines remain protected from fuel impurities.

### CABIN & CARBON

Our filters don't just filter out common pollens and the heavier by-products of combustion, but also disruptive hydrocarbons, sulphur and nitrogen compounds.

# STEERING & SUSPENSION

Manufactured in Europe, Motaquip's Steering and Suspension products deliver the responsive and balanced driving experience motorists demand.

Premium materials and finely tuned engineering processes are combined with rigorous testing to ensure only the finest parts make up our Steering and Suspension range.

From the moment raw materials are delivered to the factory, we apply strict controls that continue through the production process. This means customers drive away with perfectly integrated parts that deliver the responsive, balanced performance they're used to – even in demanding vehicles and conditions.

## WHY CHOOSE MOTAQUIP STEERING?

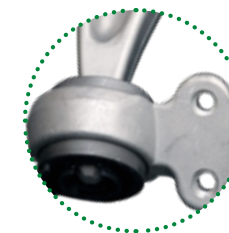

- Comprehensive selection of over 3,600 parts for various makes and models
- Meticulously crafted within state-of-the-art production facilities
- Backed by a 3-year warranty (36,000 miles/60,000 km)
- Each item is coded with brand and batch information, ensuring traceability and quality assurance

# ENGINEERED TO LAST

Precision-cut bearings, superior lubricants, and harder-wearing contact materials ensure longevity and reliability.

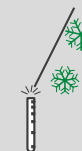

The alloy plate is designed to be lightweight while offering high tensile strength.

Higher grade rubbers mean greater resistance against temperature, longer life and better protection from foreign particles.

## SHOCK

Hardened alloys and precision engineered joints provide the tensile strength and balance necessary for even and effective shock distribution.

## TEMPERATURE

Rubber deteriorates quickly during summer, but the durability of Motaquip's raw materials means greater resistance and a longer life.

## CORROSION

Superior core materials and lubricants mean greater resistance to oxidation and corrosion from the chemicals found in driving environments.

## DEBRIS

Component dust covers are among the most vulnerable parts. Motaquip's are made from premium materials to offer more protection from foreign particles.

## MOTATIP💡

### Replacing in pairs:

Replacing steering and suspension parts in pairs is recommended for both savings and safety.

While only one side of a vehicle may be affected by defects, it's often the case that the defect has damaged the opposite. Replacing in pairs ensures consistent handling and safety whilst prolonging the lifespan of other vital parts, such as shock absorbers, tyres, and brakes.

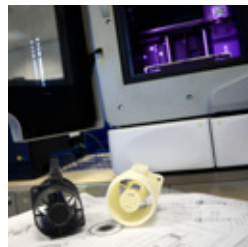

# ENGINE MANAGEMENT

Motaquip Engine Management parts harness the expertise of leading aftermarket engineers with world-beating European manufacturing.

## 3D Printed Prototypes

Designers print 3D models of prototypes on site to ensure perfect compatibility. This process is far faster and more cost effective than traditional methods of building prototypes via a third party. This keeps quality up, and prices down for our customers.

## Computer-Aided Design

CAD experts and electrical engineers work in tandem to quickly design and test new innovations using 3D printing. This setup leads to more reliable part integration, faster problem solving, and a more efficient development process.

## Reverse Engineering

Working with some of Europe's leading aftermarket electrical engineers not only has implications for quality, but ensures first generation products are available quickly and in-line with Motaquip standards for quality, consistency, and reliability.

## Cutting-Edge Manufacturing

Complex circuitry is manufactured on site with the latest, industry-leading machinery in a purpose built lab. Efficient UK-based equipment keeps production and transport costs down, and these savings are passed on to our distributors.

## Product Testing Processes

Some parts are tested to destruction so the threshold of their ability to handle temperature and voltage fluctuations can be better understood. An array of bespoke, modern test equipment scrutinises every aspect of parts, exposing them to:

- Thermal Shock
- Vibration
- Corrosion
- Voltage Fluctuation

- Testing takes place on the same site as product development, so the product team can see for themselves how products perform and where adjustments need to be made.
- Complex parts such as air mass meters are individually tested rather than batch tested, ensuring each and every item meets our high standards of product quality and performance.

# WIPER BLADES

## HYDROTEC X

### Cutting Edge Blade Technology

Introducing new Hydrotec X from Motaquip, a cutting-edge range of wiper blades designed for optimal performance no matter the conditions.

Encompassing over 200 part numbers for all popular makes and models, Hydrotec X features an OE-matching clip system for trouble free installation without the need for complex adapters. Symmetrical spoilers also ensure seamless use across RHD and LHD vehicles.

Hydrotec X utilises graphite coated natural rubber for optimum screen contact, low noise, and supreme wiping performance.

**FITMENT GUIDES**

## OUR RANGE

- Standard
- Flat
- Multi-Fit
- Hybrid
- Retro-Fit
- Rear

# OILS & LUBRICANTS

## MOTION X

Motaquip's lubricants have been engineered to protect the latest generation of engine technologies and help ensure vehicles fulfil their efficiency potential.

Each Motaquip grade of oil has been tailored to provide a range of benefits specific to the technology it was engineered for.

### European-based blending operations

Working exclusively with manufacturing and operations in Europe, Motaquip harnessed over 50 years of blending and refinery experience to deliver its new Motion X range.

In combining manufacturing excellence and testing above and beyond the required OE performance levels for temperature, viscosity, and purity, the end results are improvements to engine reliability through superior protection, cleanliness, and longevity.

Motaquip oil caters for a huge range of passenger and commercial vehicles: From low SAPS engine oils for vehicles with diesel particulate filters to fully synthetic oil for hybrid engines.

Our oils ensure optimum cylinder compression and movement to ensure maximum engine efficiency.

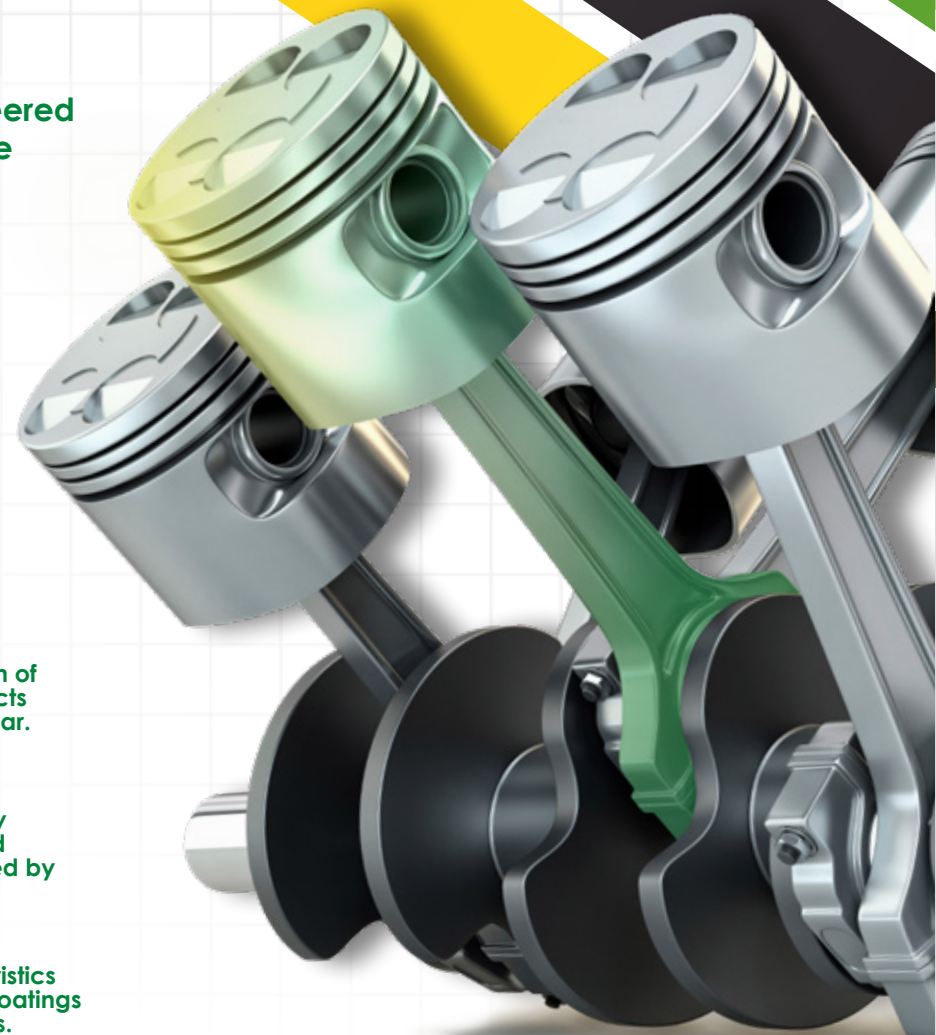

Achieving greater reduction of friction and corrosion protects against engine wear and tear.

Engines are kept cleaner by preventing the creation and build-up of impurities caused by combustion.

Superior viscosity characteristics mean stronger protective coatings on vital engine components.

# BATTERIES

## ENERGY X

Exclusively manufactured in Europe, Energy X batteries are powerful, vibrant and perfectly tailored to the needs of the European aftermarket, Energy X is all about giving your vehicle something Xtra!

### Xtra Reliability

Energy X batteries deliver OEM-level quality and high CCA (Cold Crank Amperage) ratings for immediate performance and reliability in all conditions. Exhaustive testing arms each Energy X battery with the capacity to perform in the harshest environments.

### Xtra Value

With Energy X, your vehicle is not the only thing getting something Xtra! As an aftermarket brand with over 40 years of pedigree, Motaquip specialises in delivering products with OE-equivalent quality without the OE price. Motaquip has worked its tried and tested blend of aftermarket magic in creating Energy X and the result is a range of batteries that deliver affordable performance.

### Xtra Durability

The durability of Energy X batteries helps safeguard electrochemical reactions. High quality plastic casing provides superior thermal integrity to prevent failure in extreme temperatures and have anti-corrosion terminals for a clean, reliable connection.

### Xtra Choice

With Energy X, the motorist can choose from three tiers of performance. Motaquip employs a good, better, best philosophy that sees three levels of Energy X on offer – Silver, Gold and Platinum - plus AGM, EFB and Heavy Duty options. Covering all popular makes and models, the only decision to make is which Energy X battery is right for your vehicle.

## RANGE OVERVIEW

63 part numbers in range:

SILVER	6
GOLD	24
PLATINUM	10
EFB	3
AGM	4
HEAVY DUTY	8

ALSO AVAILABLE:  
LEISURE & MARINE 6
