

CALIPER SUPERKIT (D4*S)

SUPERKIT composition: gaskets, dust covers, guide boots, clamps, pistons with internal mechanism, bleeders, grease, guides and screws.

Why repair with a Superkit?

- The useful life of the original element is increased by changing the internal parts. In fact, you get to replace all brake caliper components while maintaining the OE quality of the core and carrier.
- The repair cost is much less than replacing the entire element.
- Avoiding the manufacturing of a new element and the workshop produces less waste.

We manufacture under the same specifications as OE. And therefore, we have the ISO 9001:2015 and IATF 16949:2016 certifications.

**The integral solution
for brake caliper**
