MORE AND MORE ELECTRIC VEHICLES...

... AND FOR THAT THERE IS AN UNIVERSAL, IN- TUITIVE & SAFE SOLUTION: THE RECOVER-E-BAG®

Number of electric cars worldwide:

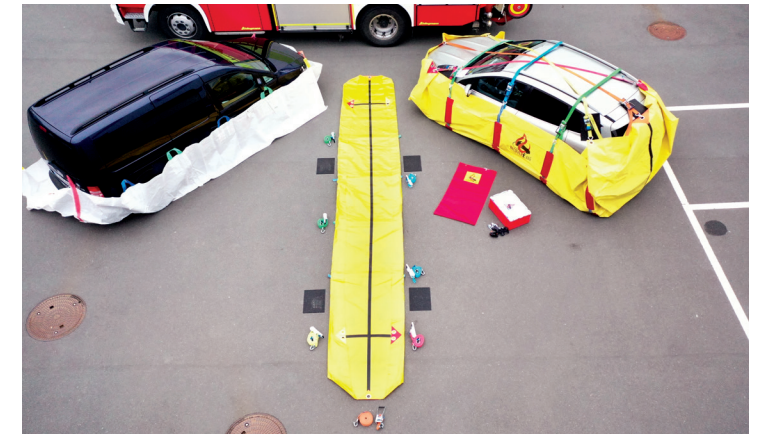

New registrations of electric cars:

Water is still regarded as a reliable extinguishing agent for fighting fires of electrically powered vehicles. The LI batteries e.g. LNMCM-based batteries continue to burn on contact with oxygen until they are completely destroyed. Reignition of the extinguished car cannot be ruled out even many hours later.

The Recover-E-Bag® has excellent properties:

- Easy to carry – set weight approx. 45 kg (25 kg Recover-E-Bag® + 20 kg accessories box)
- Intuitive, simple handling with minimal training requirements
- Universally applicable for all common car dimensions
- Specially designed for use in places with difficult access and less space (e.g.: in underground garages, parking garages, etc.)
- Sustainable (each component can be reordered individually)
- Environmental protection through the fastest consistent retention of extinguishing water
- Low space and maintenance requirements (the set is not subject to any testing period and can easily be stored for 8 - 10 years)
- Low personnel deployment, sufficient is a squad (1/2), better a squadron crew (1/5)
- Low water requirement (approx. 2.500 liters are sufficient)
- Guaranteed storage ability without water loss over 72 hrs. with intact casing
- Low acquisition costs
- Problem-free disposal of the system, no further „supervision“ by the fire department necessary

Everything included: The Recover-E-Bag® is available in a practical all-in-one box. All the necessary accessories, operating instructions and much more are included in the set.
