HEAVY OIL FLOOR CLEANER

It is a general-purpose, highly concentrated, powerful cleaning product for the removal of dense oil and dirt applied on all kinds of washable floors.

It is used for cleaning tyre and forklift tracks and heavy oil, grease, etc. on the floors of warehouses, workshops, and maintenance and repair services.

It does not damage natural matt surfaces such as marble, granite and epoxy painted surfaces.

It can be used at any water temperature.

It is for manual use.

INSTRUCTIONS ON HOW TO USE

It is used by diluting with 1/3 or 1/10 water depending on the condition of dirt and oil.

Apply the product to the surface to be cleaned.

Wait 1-2 minutes to penetrate.

With its effective formula, it quickly dissolves oil, dirt and stains.

Rub stubborn stains oil and dirt with a brush.

Rinse with plenty of water.

DIESEL PARTICULATE FILTER (DPF) CLEANING POWDER

It is used in diesel vehicles to remove carbon and ash residue from the particulate filter.

Dissolves and removes carbon residues accumulated in particle filters.

It reduces costs because a new filter will not need to be installed (Depending on the condition of the DPF).

It is used to fix failures and performance degradation caused by contaminated diesel particulate filters.

After the process, the filters are restored to full capacity.

INSTRUCTIONS ON HOW TO USE

Manual and automatic are available upon request.

In manual use, an outlet of the removed particle filter is closed with the help of a cloth.

20 g powder product is placed into the filter.

Boiling hot water is poured inside the particle filter.

Wait for 15 minutes. The particle filter is shaken and the mixture is poured out and rinsed with clean water.

The process is repeated on very tight stains.

After cleaning, the cloth is removed.

250 g of product per filter is added to the machine water when using with the machine.
