

MADE-TO-MEASURE MADE IN FRANCE

Our team brings you technical expertise thanks to its know-how perfected since 1983. From design to manufacturing and prototyping, everything is done in France in our workshop in Carros.

Our design office offers you personalised support and advice to meet your requirements perfectly.

OUR VALUES

Reactivity, proximity in customer relations and availability. The quality of our services is guaranteed by IATF 16949 and ISO 9001 certification.

Our aim is to develop new solid and trustworthy partnerships.

Our products are systematically checked on test benches.

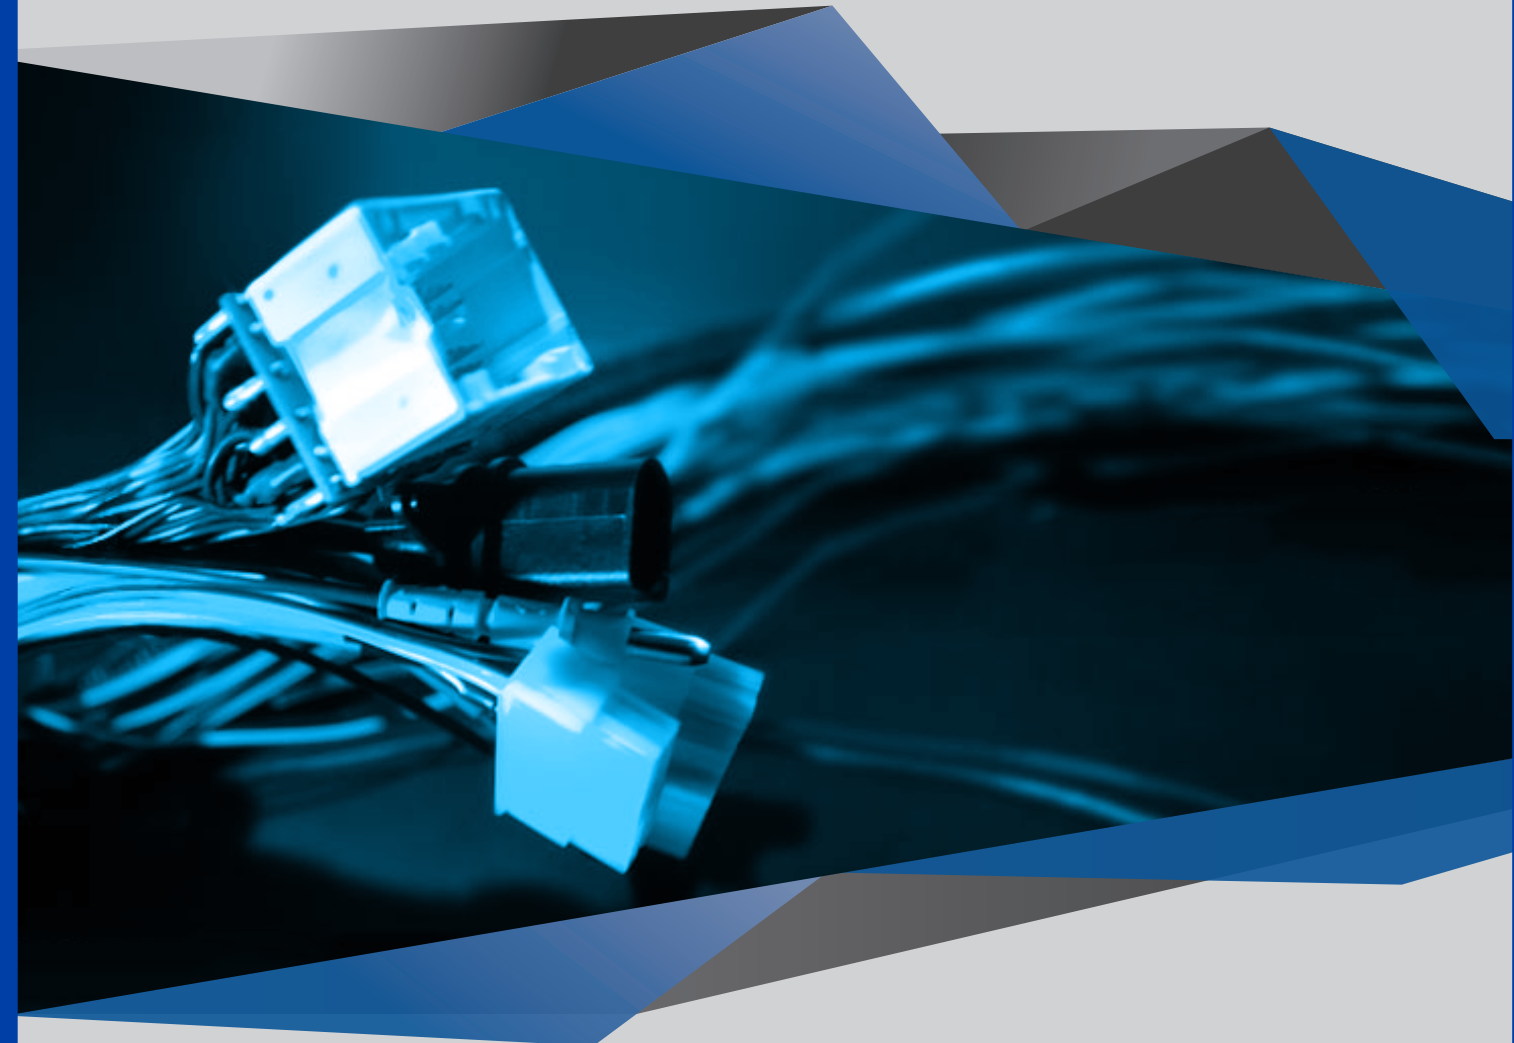

Each of our products is subject to specific controls by our Quality Department, which enables us to provide each of our customers with services with low non-conformity rates.

OUR EXPERTISE

The company has developed continuously since its creation, its original activity having been the manufacture of brake wear indicators for automotive suppliers (cutting, stripping and overmoulding).

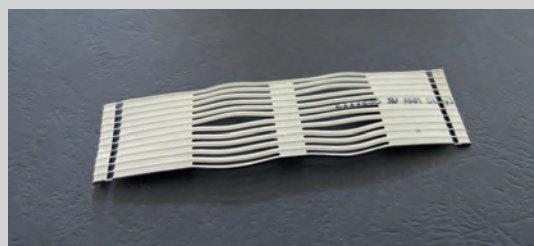

Today, our company offers a wide range of wiring and harnessing solutions in small, medium and large series.

Cutting and stripping

Equipped with high-performance automated machinery, we cut and prepare cables ranging from a few millimetres to several metres. And this, on single, multiconductor or flat cable, depending on the demand.

Depending on customer requirements, we have the ability to strip and notch flat cables.

Crimp

We carry out both micro-crimps and crimps with cross-sections greater than 10 mm².

We are equipped to crimp the majority of common contacts and are autonomous in the production of specific crimping tools adapted to your needs.

Overmoulding

With over 35 years of experience in thermoplastics, we design all types of connectors, single or multi-way, in the most varied configurations.

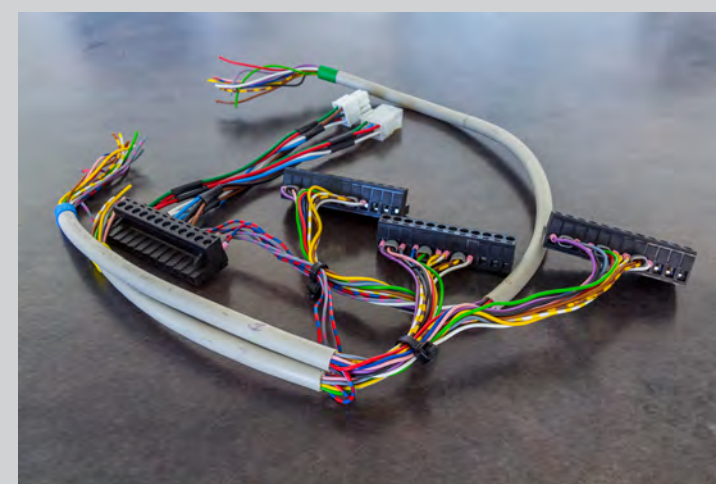

In our press shop, we overmould connectors on electrical cables, with a range of common plastics (PVC, PA6, PA12, PAA, PP, PBT...), but also plastics for special applications.

As the design, production and maintenance of the moulds are carried out in-house, we achieve significant gains in quality, responsiveness and cost.

Complex bundles and connector assemblies

We provide assembly of simple or complex harnesses, equipped with boxes, joints, sheaths, end caps, sleeves, with bending, wrapping, twisting and identification by sleeving.

Assembly is done manually or semi-automatically, depending on the type of case.

All the assembly tools or assembly/shaping aids are developed and produced internally.
