自控温尿素、柴油、车窗洗涤加热管

Self-regulating heating urea pipe, diesel pipe, windscreen cleaning tube

> 用途

用于尿素、柴油、车窗洗涤液低温启动时的预热和运行时的持续加热

> 原理

管路适用电压 DC12V/24V，以车辆电瓶卫电源

> 效果

通电 5 分钟，温度快速升至最高值使冻结在管路内介质解冻保证介质畅通，加热功率随温度升高开始下降，从而起到节能作用

> 电器功率：15-50W/m

> 承压

常温 (23°C ± 2°C) 爆破压力 11Mpa, 50°C 爆破力 9 Mpa

> Application

Warming up when liquid at low temperature and heating continuously when working

> Voltage

DC12V/24V

> Result

Self-regulating heating parts have a small resistance under lower temperature with a big heating power and rate. However, the resistance increases with increasing temperature with a decrease heating power. Heat dissipation power keeps the same with heating power while the temperature reaches to the setting temperature, which is very energy-efficient

> Power

15 to 50 w/m

> Working pressure

Burst pressure 11 Mpa (23°C ± 2°C), 9Mpa at 50°C

电加热管件

Electric heating tube

电加热管件是一种通过车辆预存电量加热燃油、尿素、玻璃清洗液等车辆管路的系统，其作用是保证车辆在较低环境温度下的正常运转。

传统的电加热管件采用电阻丝作为发热元件，温度难以均匀控制，系统复杂多元，安装升级十分麻烦，控制系统故障还会导致电热丝过热，危及车辆安全。

Electric heating tube can heat fuel, urea and windshield washer fluid with electricity and make sure cars drive safety at a lower temperature.

However, the system of traditional electric heating tube is complex and it is not easy to set up and update. Moreover, once the control system is malfunctioning, it would lead to local overheating which is very dangerous for automobile security.

传统电阻丝加热管件产品及示意图

Products and schematic of traditional electric heating tube with resistive heater

自控温管件

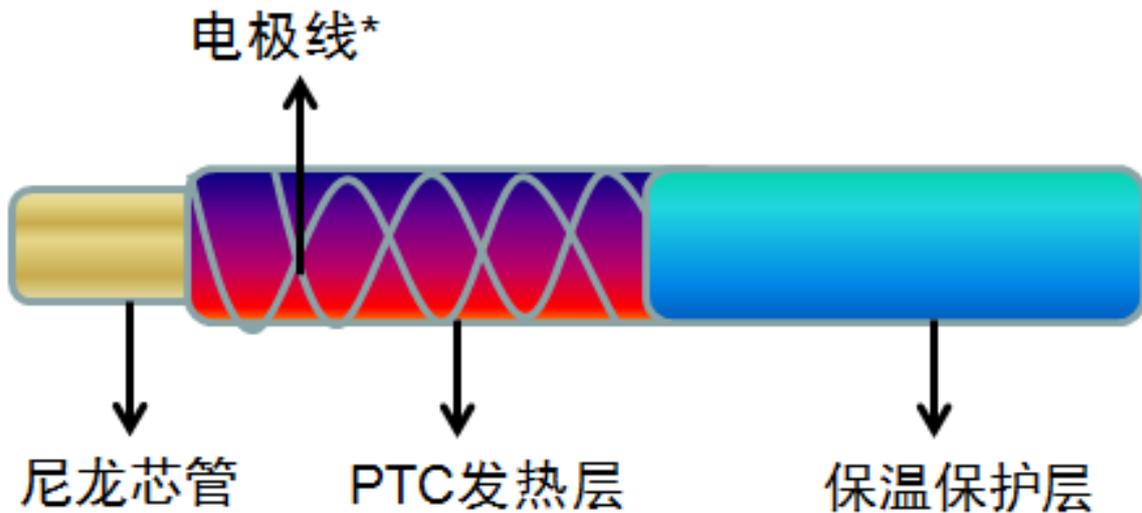

Self-Regulating Heating Tube

> 高效 / 精准控温

>Energy-Saving and Effectiv

自控温管件是采用具有 PTC 效应的高分子材料替代电阻丝作为发热元件制成的一种电加热管件，借助 PTC 高分子的电阻 - 温度相关效应，达到自行控制温度的目的。

Self-regulating heating tube is a very energy efficiency and safety heating tube by using a polymer-based positive temperature coefficient (PTC) material instead of resistance wire to control the temperature of tube.

自控发热 成本低廉

Self-Regulating Heating and Low Cost

传统电加热不仅需要连接加热丝和温度探头，还需外加控制和监控系统以防过热发生事故。这导致系统改装成本高昂。

Electric heating parts such as heating wire temperature detector and monitored control system are necessary which increased production cost.

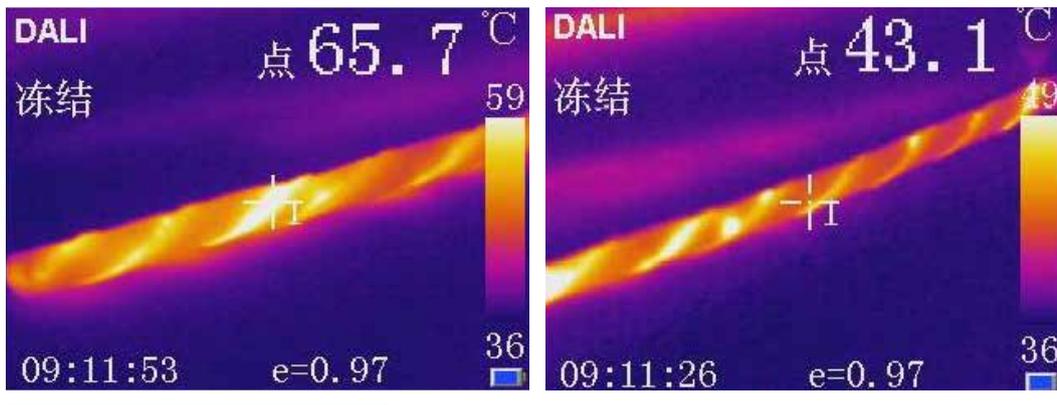

自控温管件单头接，整体成本低廉，无需外加控制系统。

Self-regulating heating tube costs much lower due to the single connection and without the monitored control system

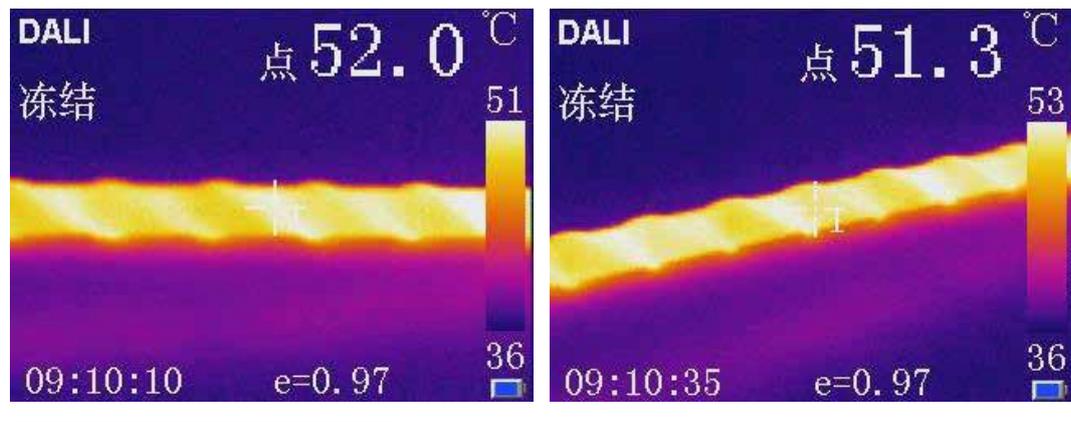

发热均匀 安全使用

Uniform heating and Safety

传统电热丝加热局部过热，高分子材料热传导率低，容易发生意外。

Local overheating, low efficiency, Danger.

自控温管件加热发热均匀，加热效率高，使用安全。

Uniform heating, High efficiency, Safety.
