Car

LCV

Truck

Bus

Agricultural

Plant

Industrial

Rail

Marine

**REMANUFACTURED IN WORLD CLASS FACILITIES:** because even the finest amount of contaminant can cause a big problem, we assemble our remanufactured pumps & injectors in a purpose built suite of ISO 14644 clean rooms. Class-7 certified, they're capable of filtering down to as little as 0.5 microns – that's the equivalent of 0.0005 of a millimetre.

Every part we remanufacture is end-of-line tested by factory trained technicians, on one of our many OE test benches, using the OEM's very latest test plans. Designed to simulate real-world engine conditions, from start up to full system pressure, these tests ensure that our product will perform just like the OE, time & time again.
