OUR COMPANY

Prestolite Electric is a global manufacturer and supplier of alternators, starters, auxiliary electrical equipment and services to the transportation, industrial and military industry. Prestolite has a strong heritage dating back to 1911, and includes the Leece-Neville, Motorola, Butec and Lucas CAV brands, resulting in a long history of engineering excellence and innovative products.

OUR BRANDS

With manufacturing and distribution locations in the United States, United Kingdom, Brazil, China, Canada, India, Mexico, Russia and Hong Kong; **Prestolite Electric** provides customers with access to their application needs for products and services under the **Prestolite Electric** and Leece-Neville brand names.

OUR PRODUCTS

In Europe **Prestolite** supply to more than 40 OEMs, in USA we are the dominant supplier to the Bus, truck, refrigeration and military markets, and in China **Prestolite** is the number one supplier to the domestic bus and coach industry, supplying over 700k units a year.

OUR UNIQUE OFFER

Remember that the vast majority of a range comes to you **BRAND NEW**. Of course this offers you OE quality levels, no availability problems due to core shortages but also the advantage of **NO CORE SURCHARGES!** How many times have you sold an alternator or starter only to have your profit wiped out because your supplier won't accept your core? With Prestolite you can simply sell and forget.

DISCLAIMER

While every care has been taken in compiling the information in this document, Prestolite / Leece-Neville cannot accept legal liability for any inaccuracies, omissions, or consequential damage resulting there from. Prestolite / Leece-Neville has an extensive design and development team which may alter product specification. Prestolite / Leece-Neville reserves the right to alter specifications without notice and whenever necessary to endure optimum performance from its product range.

HOW TO USE THIS CATALOGUE

SECTION A

This section gives a basic understanding of the operation of the Alternator and Starter Motor within the Marine environment, and includes Alternator and Starter Motor function, general wiring diagrams and a Troubleshooting guide.

If you have any queries that are not covered by this guide, please contact the Technical Helpline on +44 (0) 20 8231 1137.

Labels for Alternator table:

- Voltage
- Output Current
- Insulated or Earth return (Grounded)
- Adjustable voltage
- Direction of Rotation
- P or N Type Regulation
- Product features: Mounting type, Terminations, Voltage set point, Shaft size, Pulley info, Additional info
- Application / Cross reference
- Prestolite Part no.
- Alternator images

GLOSSARY OF ALTERNATOR TERMS

Earth return (ER) / Grounded (G) alternators may only be fitted with a B+ (battery positive) terminal. The negative part of the electrical circuit is normally completed through the body of alternator to the vehicle, ie earthed / grounded. Also referred to as ground return. On certain vehicles a B- stud is fitted to the alternator. This is connected to the body of the alternator and must be connected to the negative earth lead where fitted.

Insulated return (IR) / Insulated ground (IG) alternator have B+ (battery positive) and B- (battery negative) terminals, ie the battery leads at the alternator are insulated from the alternator frame, ie insulated return.

B+ terminal is the battery positive connection on the alternator.

B- terminal is the battery negative terminal on the alternator.

WL is the warning lamp terminal. (**L** when smartreg is used.)

W or **~** or **AC** is the phase terminal, used for tachometer

DFM terminal communicates with the vehicle ECU and controls alternator output depending on load and system conditions.

F- is field isolation terminal. If field isolation is not required the F- must be connected to the B- terminal.

S is the sense lead / terminal. This is normally used where the voltage drop across battery leads are expected to be significant, ie long battery cable runs, where multiple battery banks and load splitters are used. This terminal monitors the voltage at the point of termination not the alternator terminals, and regulated alternator performance accordingly. This terminal is normally connected directly to the positive terminal of the charging system battery.

Alternator rotation. Alternator rotation is determined by the fan design. By design the alternator is bi-directional and can operate in either CW or CCW direction. Straight fan vanes are bi-directional, see fig.1. Curved fan vanes are direction specific, and a rotation direction is indicated on the fan, see fig.2. Directional fan design generally provide more efficient cooling of alternator.

Fig.1

Fig.2

Internal fan alternators are rotation specific, due to the fans being permanently attached internally to the rotor. The direction of rotation on internal fan alternators cannot be changed. Consult the drawing or Technical Helpline for specific part number rotational direction.

Note: Directional rotation when looking at front of the alternator.

GLOSSARY OF ALTERNATOR TERMS CONTINUED...

Mounting configurations. Various options are available, see fig.3 - fig.6

Dual foot mount on main mounting bracket, and single mounting on adjusted bracket.

Fig.3

Spool mount on main mounting bracket, spool size from 25mm - 80 mm and single mounting on adjuster bracket.

Fig.4

Pad mount

4 Mounting point as shown.

T-mount is similar to pad mount, but with only 3 mounting point. (2 on drive end and 1 on rear end)

Fig.5

Cradle mount

The alternator is mounted by clamping it around the alternator body.

Fig.6

ALTERNATOR WIRING DIAGRAMS

The wiring diagrams shown below are typical and for reference only. For specific wiring diagrams or information, please contact the Technical Helpline on +44 (0) 20 8231 1137.

EARTH RETURN

The negative circuit is supplied through the vehicle chassis and the alternator frame.

INSULATED RETURN

The negative circuit is isolated from alternator frame and vehicle chassis.

ALTERNATOR WIRING DIAGRAMS

CONTINUED...

FIELD ISOLATION

This option is supplied with a F- terminal, for use with battery / field isolator switch.

NCB2 TYPE

This is an earth return alternator. The vehicle harness plugs directly into the regulator connection. The regulator may interact with the vehicle ECU. These regulators are not interchangeable as some functions vary depending on application. Ensure the correct regulator / alternator is specified.

Fig. 10

ALTERNATOR WIRING DIAGRAMS

Multiple applications are common placed where high current demand is required.

It is important that the regulated voltage of the alternators used are matched, failure to do so would cause one of the alternators to shutdown. In addition it also important that the length of cables for the two alternators be kept the same to ensure that the voltage drops in the lines are identical (or as close as possible). The voltage drops must not exceed 1.0V.

TWIN APPLICATION

Two (or more) alternators paired to deliver high current output.

Fig.11

External regulators / Battery management systems.

Many vessels use complex battery management systems to charge multiple battery banks. This is done by linking into the alternator field brush to control the field current. For wiring instructions, please consult with battery management system supplier.

External regulation conversion kits are available for the 8LHA, 8LHP, BLD, BLP, LBA, LBP, MDA, MDA alternators, please see Auxiliary Component section.

Not all alternators are suitable for use with split charging systems. Split charging systems can prevent the alternator from sensing battery voltage or give a false battery voltage reading. Ideally an alternator with a sense (S) terminal must be used. See fig.8.

Please note that external regulation systems and battery management systems might operate the alternator outside of its intended design parameters and could invalidate warranty.

ALTERNATOR FUNCTION

The alternator essentially consists of 3 components; the rotor / stator assy, the rectifier and the regulator.

The rotor and stator assembly utilised basic physics to generate electricity by rotating an electromagnetic field (rotor) within a series of windings (stator). This produces a 3 phase alternating current (AC) output from the stator.

The AC output is not suitable for DC system. The rectifier utilised a series of diodes to convert the original AC output to a direct current (DC) output, which is supplied to the vehicle loads and batteries.

The regulator controls the output of the alternator by increasing and decreasing the magnetic field of the rotor as required.

The alternator must be able to supply current to all required loads and have sufficient capacity to charge the vehicle batteries.

Most vehicles have some kind of warning light function that indicates when the alternator is not functioning as expected. This warning light will be illuminated when the ignition is switched on, but engine not started. Once the engine has been started and is idling the warning light go out. This warning light circuit also serves as an excitation for the alternator, supplying approx 2.0-2.8W.

The alternator will not charge if the warning light is not connected.

For alternator wiring details refer to Fig.7 - to Fig.11. These illustrations are for reference only, please contact the Technical Helpline on +44 (0) 20 231 1137 for specific wiring information.

ALTERNATOR TROUBLESHOOTING GUIDE

Problem	Possible cause	Action
No warning light when switched on	Flat battery	Check battery, charge in accordance with battery manufacturer's specification if required.
	Blown warning light bulb or fuse	Check warning light bulb or fuse.
	Poor / incorrect connections	Check wiring and connections.
Warning light does not go out when engine idling	Poor / incorrect connections	Check wiring and connections.
	Warning light shorted to earth	Check wiring and connections.
	Excessive voltage drop in ignition circuit	Check wiring and connections.
	Faulty rectifier	Check rectifier circuit and diodes.
	Faulty regulator or alternator	Remove and test regulator and alternator.
Low output	Slipping drive	Check Pulley, belts or coupling.
	Faulty regulator or alternator	Remove and test regulator and alternator.
Flickering warning light	Slipping drive	Check Pulley, belts or coupling.
	Volt drop in sensing line	Check wiring and connections.
	Faulty regulator or alternator	Remove and test regulator and alternator.
Battery overcharging, high alternator output voltage	Faulty regulator	Remove and test regulator.

GLOSSARY OF STARTER MOTOR TERMS

Earth return (ER) starter motors will only be fitted with a B+ (battery positive) terminal. The negative part of the electrical circuit is completed through the body of starter motor and the vehicle chassis.

Insulated return (IR) starter motors have B+ (battery positive) and B- (battery negative) terminals, ie the battery leads at the alternator are insulated from the vehicle chassis.

B- terminal is the battery negative terminal on the alternator or starter motor.

B+ / Terminal 30 is the battery positive connection terminal on starter motor, normally found on solenoid.

SW / Terminal 50 is the positive feed connection to the solenoid.

Terminal 15a is a cold start terminal.

Rotation is generally in a clockwise (CW) direction, when looking at the front of the starter motor, however there are counter clockwise CCW applications.

Fig.12

Fig.13

Pinion at rest (PAR) position is the measured distance between the mounting flange and the front face of pinion when the starter is not energised. (See Fig. 14)

Pinion full travel position is the measured distance between the mounting flange and the front face of the pinion when the starter motor is energised. (See Fig.14)

Fig.14

GLOSSARY OF STARTER MOTOR TERMS

CONTINUED...

Solenoid / Switch is the part of the starter that activates the engagement / disengagement of the pinion/drive to the vehicle ringgear/flywheel, and also connects the battery to the motor via contact switch.

Mounting configurations. Several options are available, the most common are SAE1 and SAE3. See fig.15 & fig.16.

SAE1

The 3 mounting holes are on a PCD of 127mm, spaced at 90°

Fig.15

SAE3

The 3 mounting holes are on a PCD of 146mm, equi-spaced at 120°

Fig.16

Starter drive is the mechanism linking the starter rotational force and the vehicle engine, via ring gear/flywheel. This incorporates an overrun device to protect the motor in the event that the starter is not released when the engine has started.

The pinion is the geared component on the drive that interfaces with the ring gear / flywheel.

STARTER MOTOR WIRING DIAGRAMS

The wiring diagrams shown below are typical and for reference only. For specific wiring diagrams or information, please contact the Technical Helpline on +44 (0) 20 8231 1137

The fitment of a Starter Lockout unit is recommended to prevent energising of starter motor whilst engine is running.

EARTH RETURN

The negative circuit is supplied through the vehicle chassis and the starter motor frame.

Fig.17

STARTER MOTOR WIRING DIAGRAMS

CONTINUED...

INSULATED RETURN
The negative circuit is isolated from starter motor frame and vehicle chassis.

Fig.18

AUXILIARY SOLENOID
Used on gear reduction starters to limit current draw during soft start operation.

NOTE:
Do not disconnect or bypass the control relay (if fitted) on the starter motor.

Fig.19

STARTER MOTOR FUNCTION

The basic components of the starter motor is the solenoid (switch), the motor, the shift assembly and the drive assembly.

When the circuit is energised, via the start button, the solenoid is activated into 1st stage contact, which engages the linkage system in the shift assembly and in turn moves the drive towards the ringgear. At this point a small current will flow through the motor causing a slow rotation of the motor and drive, this is to allow for the pinion to engage the ringgear correctly.

Once the pinion has engaged the ringgear, the solenoid 2nd contact will be activated and full current will be supplied to the motor, causing the motor to rotate at full speed and torque, cranking the engine via the drive and ringgear.

Once the engine has started and the engine speed is higher than that of the starter motor the overrunning protection function of the drive will prevent the engine accelerating the starter motor. As soon as the engine has started the driver / operator should release the starter button.

Please note that the over-run clutch protection function will be damaged by wreckless & prolonged over-cranking.

Gear-reduction starter motors are becoming increasingly popular due to compact design. These starters operate in the same manner, but is fitted with a small gearbox between the motor and the shift / drive assembly.

For starter motor wiring details refer to Fig.17, Fig.18 and Fig.18. These illustrations are for reference only, please contact the Technical Helpline on +44 (0) 20 8231 1137 for specific wiring information.

STARTER MOTOR TROUBLESHOOTING GUIDE

Problem	Possible cause	Action
Starter does not engage	Flat battery	Check battery, charge in accordance with battery manufacturer's specification if required.
	Poor / incorrect connections	Check wiring and connections.
	Faulty ignition or start button	Check battery voltage is available at the starter motor solenoid terminals when ignition / button operated.
	Faulty solenoid / auxiliary solenoid	Test operation of the solenoid / auxiliary solenoid.
	Faulty starter	Remove and rectify.
Starter engages but does not crank the engine	Flat battery	Check battery, charge in accordance with battery manufacturer's specification if required.
	Poor / incorrect connections	Check wiring and connections.
	Excessive volt drop in main cables	Check voltage drop by measuring voltage between starter terminals and battery terminals. Also, check earth circuit when ignition / button is operated.
	Incorrect starter timing	Remove and rectify.
	Faulty starter	Remove and rectify.
Starter engages but cranks slowly	Flat battery	Check battery, charge in accordance with battery manufacturer's specification if required.
	Poor / incorrect connections	Check wiring and connections.
	Excessive volt drop in main cables	Check voltage drop by measuring voltage between starter terminals and battery terminals. Also, check earth circuit when ignition / button is operated.
	Faulty solenoid	Remove and replace.
	Faulty starter	Remove and rectify.
Starter spins against flywheel	Spacer or mounting flange unnecessary	Check if spacer is required and discard if unnecessary
	Incorrect starter timing	Remove and rectify.
	Faulty starter	Remove and rectify.

USEFUL CONTACT DETAILS

SALES DIRECTOR - AM GLOBAL, BOTSWANA, MOZAMBIQUE, SOUTH AFRICA, ZIMBABWE

Ferenc Gemesi

Mobile: +44 782 687 1622

Email: fgemesi@prestolite-eu.com

SALES MANAGER - HONG KONG, SINGAPORE, MALAYSIA, INDONESIA, THAILAND, SOUTH KOREA, TAIWAN, NORWAY, FINLAND, ICELAND AND UK

Steve Trulock

Tel: +44 (0)208 231 1119

Mobile: +44 (0)776 964 3365

Email: strulock@prestolite-eu.com

SALES MANAGER - SWEDEN, UK SOUTH

Andy Fowler

Mobile: +44 (0)792 086 2230

Email: afowler@prestolite-eu.com

SALES MANAGER - GREECE, GEORGIA, KAZAKHSTAN, MONGOLIA, SOUTH EASTERN EUROPE

Gyorgy Papp

Mobile: + 36 706 072 789

email: gpapp@prestolite-eu.com

SALES MANAGER - POLAND, KAZAKHSTAN, UKRAINE

Janusz Zajac

Mobile: + 48 509 021 511

email: jzajac@prestolite-eu.com

SALES MANAGER - AUSTRIA, DENMARK, GERMANY, NETHERLANDS, SWITZERLAND

Tel: +44 (0)20 8231 1137

Email: info@prestolite-eu.com

SALES MANAGER - ITALY, TURKEY

Paul Aylett

Tel: +39 011 815 6711

Mobile: +39 338 489 2939

Email: paylett@prestolite-eu.com

SALES MANAGER - BELGIUM, FRANCE, LUXEMBURG, MAGHREB AND NORTH WEST AFRICA

Paul Bouabdellah

Tel: +33 1 61 35 14 58

Mobile: +33 6 8794 6784

Email: abouabdellah@prestolite-eu.com

SALES MANAGER - CYPRUS, MIDDLE EAST

Ayoub Ayoub

Mobile: +357 99 252 527

Mobile (Lebanon): +961 3 541 826

Email: aayoub@prestolite-eu.com

SALES MANAGER - SPAIN, PORTUGAL, ANGOLA

Alexis Dévé

Mobile: +34 649 388 426

Email: alexis@prestolite.com.es
