

Premium protective films and laminates

for a sustainable world

ace-films.be

Sustainability

Safe products for a sustainable world

⇒ ZERO PELLETT LOSS

We not only ensure that all pellets or granulates that are 'lost' in the production chain are swept up, counted and disposed of correctly. We also actively seek out the source of and reasons behind these 'lost' granulates and put corrective actions in place to eliminate the risk in future.

THE OCEANS BELONG TO US!

⇒ RECYCLING

ACE boasts the latest technology in recycling of manufactured plastic, turning its 'unavoidable' production waste into valuable raw materials. These materials are in turn incorporated back into our films thus contributing to a Circular Economy.

WASTE NOT, WANT NOT!

⇒ ENERGY

Energy costs money and resources. Precious resources. Our aim is to reduce our energy consumption per m² produced, and to seek out new, greener and cleaner sources of energy that do not have a negative impact on our surroundings and our planet.

THE PLANET BELONGS TO US!

⇒ RAW MATERIALS

ACE is actively engaged in working with business partners to use raw materials in a way that reduces dependence on fossil-based fuels. Whether by using mineral fillers or a mass balance approach with renewable sources, ACE is finding new keys to solving the environmental conscience.

GO GREEN!

Surgical drapes and gowns

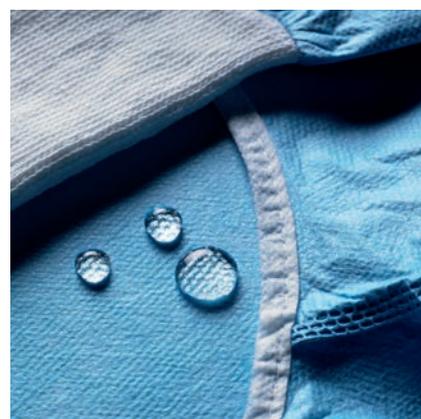

Highest expertise matters in your market. All materials from ACE are engineered with the optimum balance of safety, comfort and performance. Our films and laminates, well known under the name Medicace[®], are engineered to meet EN 13795 regulations and ensure that you build in a high degree of safety into your single-use surgical drapes.

All components are selected with your criteria in mind and the final product delivers the best performance for your application.

Our Gownace products present total barrier properties whilst offering superior breathability and drapability levels. This means that even during the longest operation, the wearer remains protected and comfortable throughout. Sold to you in rollstock form, our products are manufactured under strict conditions so that they arrive ready to use.

⇒ HIGHLIGHTS

- EN 13795
- Full barrier properties
- Multi-layer laminates
- Tailor-made solutions

Industrial applications

ACE has been producing breathable films for industrial applications for more than 25 years and is seen as a market leader in its area of expertise.

⇒ ROOFING MEMBRANES

Both Polypropylene and Polyethylene versions available
Offered in white, black and colours
Film contains UV stabiliser as an option
Controlled shrinkage values

⇒ PROTECTIVE WORKWEAR

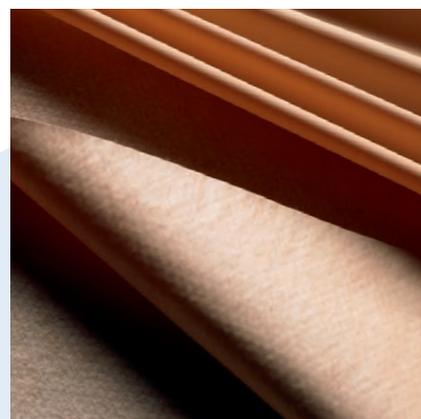

Suitable for types 3 through to 6 in a range of colours
Breathable film an option
Both extrusion and adhesive lamination
Antistat properties offered

⇒ CONSTRUCTION

For flooring, wall coverings, underlayments
Insulation and isolation
2 and 3-ply laminates
Breathable and nonbreathable choices

⇒ WOUNDCARE

Wound care solutions you can rely on. Every time. A reliable single-use wound dressing is a decisive factor for healing. Offered in roll form, RKW's films and laminates deliver an effective barrier to liquid where needed, a product that flexes with movement of the body, and a set of colours and surface finishes that suit the application.

Flexible technology that broadens horizons

TECHNOLOGY

Cast embossed polyolefin film

- Rolls up to 2.4 meters wide and with an outside diameter of up to 1.2 metres
- Up to 5 layers, offering a wide range of options for film performance

In-line extrusion lamination

- Glue-less lamination of film to nonwoven
- High strength materials for robust industrial applications

Off-line adhesive lamination

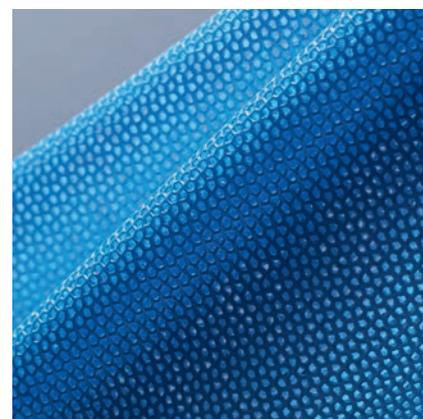

- Partial, full width and offset lamination
- Multi-layered composites
- Perfect for creating tailor-made solutions for a variety of end-uses

Off-line vacuum perforation

- Flexible aperturing lines that offer filtration as an application
- Applications include hygiene, medical and food packaging

Pilot line

- Ideal for fast evaluation of new resins and film formulations

ACE is based in Liège, Belgium, at the heart of the European roadways. We have been producing cast embossed films and laminated since 1973, and still, today, we export our products across the globe.

Our customers come from the medical and hygiene disposables market as well as from the durable sectors. Working together to seek out solutions to the challenges thrown at them by customers and stakeholders, our Team offers the right product for the right application at the right conditions, along with the support needed to build a mutually satisfactory business
