

About us

Our family-run company has been working as a commission dyer and finisher since its founding in 1950. With 150 highly motivated employees and state-of-the-art environmental and machine technology, we give your textiles form, color and function. Our production spectrum ranges from pre-treatment and dyeing to finishing and coating of textile surfaces.

Quality and sustainability are top priorities for us: We are certified according to ISO 9001, 14001 and 50001. In addition, we are happy to support you with article-specific certifications (e.g. Ökotex 100, Cradle-to-Cradle, GreenTag).

HIGHEST
QUALITY IS
OUR STANDARD.

Laboratory / Development

In our laboratory we develop samples for innovative and future-oriented textile applications - together with you, well-known suppliers for dyestuffs and auxiliaries as well as research institutes.

Warehouse / Logistics

Our own truck fleet and the option of storing your raw materials in our warehouse until you place the order, ensure fast and flexible production and delivery.

Finishing

For drying, thermofixing and finishing we have a wide range of high-performance stenter frames with up to 360 cm width and extensive equipment.

Dyeing

Wide washing machines up to 400 cm width ensure optimum pre-treatment of your goods. A universal machine park in the dyehouse enables us to dye all common substrates and blends.

Coating

We coat your textile surfaces (up to 340 cm width) with water-based systems as paste or foam, as 1-layer or multi-layer application (e.g. for blackout coating).

Quality Control

In addition to a visual quality control during the final fabric inspection, our laboratory offers a variety of tests such as light fastness, water and air permeability, tensile test, IR remission etc.
