

# Hook & Loop Solutions for the Automotive market

Design flexibility

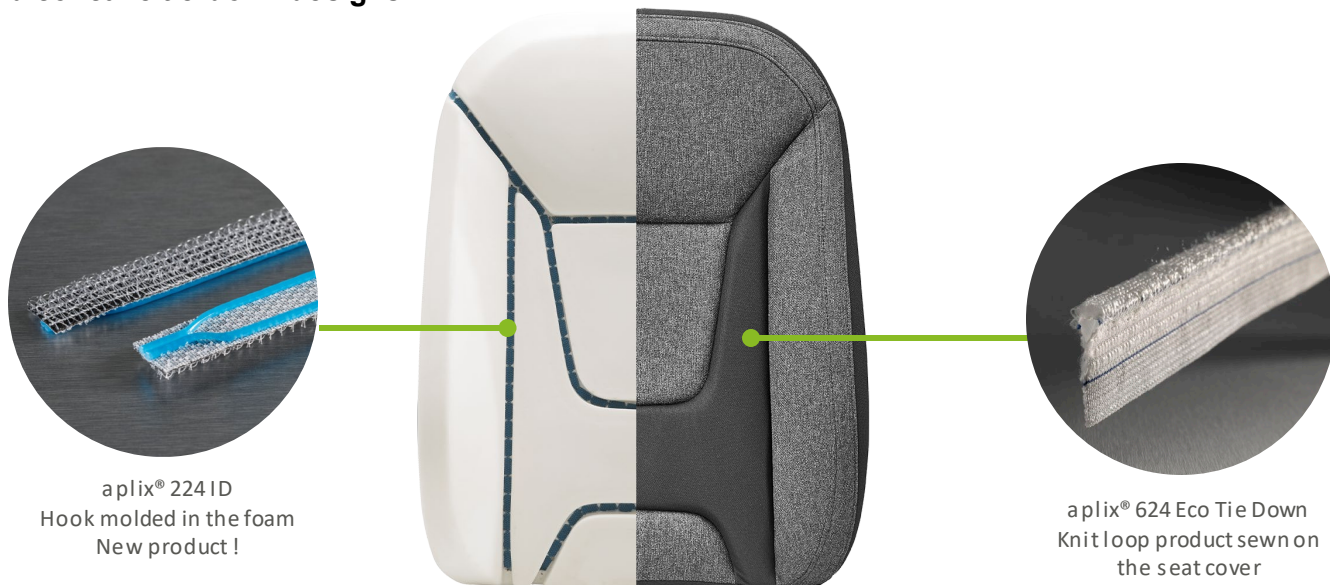

Ergonomics

Quick assembly

## Solutions for Seat assembly

APLIX has developed a complete range of mold-in products for seat assembly to meet the performance requirements of automotive interiors in terms of **design, comfort and ergonomics**.

To meet the new seat design expectations of Electric and Autonomous vehicles, we innovate with a **new product offer that can be used on very thin foam pad and that allows straight, curved and concave tie-down designs**.

## Solutions for Headliners & Sunroof

Thanks to its **intermold® technology**, APLIX offers a global solution to affix headliner to sunroof modules for an improved design. Our solution is composed of plastic hook parts (slide in, push pin, other methods) which directly engage into the loop part positioned on the sunroof module. Our closure system requires **minimal effort from the operator or robot to secure the engagement** during the assembly process thereby improving ergonomics and quality.
