FOR A MORE SUSTAINABLE FUTURE

PRODUCING WITH RENEWABLE AND ENVIRONMENTALLY FRIENDLY ENERGIES.

Industrias Ponsa has invested in photovoltaic and wind energy, generating enough to be able to manufacture using only renewable natural resources.

Industrias Ponsa's commitment to the environment was certified in 2018 with the award of ISO 14001. Ponsa continues to be committed to sustainable energies as the most effective way to reduce CO2 emissions. It is also a forerunner in manufacturing with sustainable materials, plant-based and recycled fibres. Ponsa promotes the circular economy of its products and has its own production of polypropylene (PP) yarn, being pioneers for this fibre. PP is the most environmentally friendly synthetic fibre of all, as it starts as a by-product. It is classified in the Higgs Index as one of the most sustainable fibres available. It also has the lowest carbon footprint of all fibres and is dyed in mass with zero water consumption.

The company's social responsibility promotes the circular economy and is aligned with the Sustainable Development Goals of the United Nations 2030 Agenda.

At our Manresa plant we produce

750.000 Kw/year

of photovoltaic solar energy,
which saving

700 Tn de CO2.

In addition, we participate in wind
power projects, generating

280 MWH per year.
