**USE TEXTILE**

## SIGN COLLECTION

SENFA® offers a comprehensive range of functional fabrics to meet the highest expectations of the market for large format digital printing up to 5.10 meters. For the last 15 years, the SIGN COLLECTION is your guarantee of a quality textile media for excellent print results especially in niche applications such as backlit textiles for lightboxes and frontlit display applications.

Based in France, SENFA integrates the entire manufacturing cycle from R&D to production and commercialisation. This enables SENFA to develop new and innovative high-performance coated textiles anticipating future trends in domestic and international markets.

With our understanding of the market, we can develop and create solutions for your needs guaranteeing the highest quality. Our strength is based on understanding and supporting the customer ensuring we provide complete satisfaction.

### Fire retardant certification

Our complete range complies with international fire regulations such as M1, B1, NFPA 701, CA 1237 Sm...etc.

### A trusted link in the graphics chain

Tested and approved by the most important players (EFI Vutek, Durst, HP, Fotoba...) prior to market launch, our products enable the best possible results by combining RIP software, machines and media to produce the most stunning and visually impressive graphics.

# SIGN COLLECTION®, a complete range for all your needs

## BACKLIT

A complete range of transparent and semi-transparent fabrics for backlit applications like lightboxes. Great impact which brings light to colours and colours to life. These textiles are particularly useful for the promotion of products indoors and outdoors where light can be important.

## FRONTLIT

Frontlit products for various different applications such as advertising posters, roll-ups, pop-ups and exhibition stands. The range contains a large variety of textures and structures (woven, non-woven and knitted) which means a product is available to satisfy practically all situations.

## BLOCKOUT

The blockout fabrics stop any light to leave only the beauty of the printed image without any disrupting light or shadows from behind. Our specially developed blockout coating enables us to manufacture fabrics printable on both sides, perfect for trade fair stands or hanging graphics in restaurants, museums or shopping malls etc.

“

Our in-house R&D works closely with all parts of the supply chain to optimize our products for printing be it with solvent, eco solvent, UV, Latex or sublimation inks (direct or transfer).

”

## ARTISTS CANVAS FOR FINE ART

With a scanner, photo-shop, a RIP, a large format printer and a DECOPRINT fabric, the finest masterpieces can be printed in large quantities with exceptionally vivid colours. These fabrics are ideal for museums, points of sales, exhibitions and art studios.

## SPECIAL APPLICATIONS

The DECOPRINT range includes speciality products, each with its own unique characteristic – for example stretch or flocked fabrics or our very original fabrics with special effects (gold, silver, diamond) to enable the personalisation of large surfaces (restaurants or casino walls, exhibition stands etc).

## ECO DESIGN MANAGEMENT

For a number of years, SENFA has developed an integrated eco-design management system and commit to a constant process of offering new products and improving existing ones in order to optimise functional quality and respect for the environment.

Our textile bases and coatings meet the latest health and safety standards as well as environmental requirements for the digital printing market and we integrate the carbon footprint in the product's life cycle analysis.
