ARCHI COLLECTION

SENFÀ offers technically sophisticated interior design textile substrates that are made to decorate spaces and create a unique atmosphere for each one.

The ARCHI COLLECTION offers a wide range of products that boast many technical characteristics such as being non-flammable, antibacterial, breathable, waterproof, soundproof, blackout as well as backlit, and many more. Thanks to its specialized design, every product is guaranteed to imbue its space with a serene ambiance.

The France-based company SENFÀ are involved in every step of the production cycle, from conception, to manufacture, to marketing. Predicting upcoming trends on both national and international markets allows us to develop new and technically innovative textiles, each one better than the last.

On top of offering top quality products, our excellent organisational and logistics teams ensure that SENFÀ® can supply textile substrates to our customers quickly and efficiently.

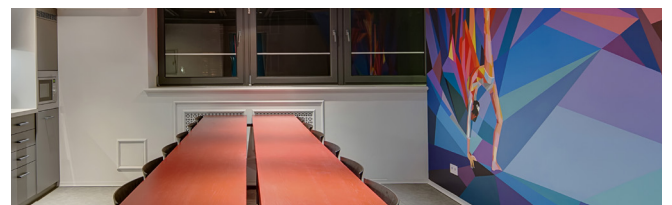

Upholding high standards

We ensure that DECOMIND® products always respect the current industry standards, and that they are certified by top European laboratories to guarantee that they are in line with interior design norms (M1, B1, BS1D0, A+, CE, etc.). We make sure that we are always up to date with the latest requirements so that we can offer you products that conform to the market standards.

Customizable to suit your style

Besides their technical advantages, our textiles can also be digitally printed in high definition without affecting their functionality. You can create panoramic designs for your decor that marry comfort and style.

ARCHI COLLECTION, a complete interior design range

SOUNDPROOF

When installed as baffles, wall or ceiling hangings, our customizable soundproofing textiles block out noise pollution through acoustic control and by improving the audibility of speech within the room. The textile absorbs echoes within the space, especially those produced by speech.

ELECTROMAGNETIC WAVE PROTECTION

Our fabrics offer an innovative and functional benefit by selectively filtering out electromagnetic waves, thanks to their light and flexible design.

The ESTOMPE® range is available in a variety of selective designs that reduce the effects of certain types of radiation, such as mobile phone radiation or WIFI, as well as non-selective variations that block out a wide range of frequencies.

WATERPROOF

For improved day-to-day convenience, we have developed waterproof and water-repellent products. This easy-to-clean design allows you to wipe off any residual products without difficulty. The non-slip formula can be added to the underside of the textile, which is especially popular for place mats.

“

When style and technology come together to beautify your interior.

”

LIGHT PROTECTION

All our window-dressing fabrics, whether they be light-blocking, light-diffracting, coloured, metallic or printable, are PVC-free and allow you to adjust your lighting with style. These window treatments can be designed to suit your interior decoration to add warmth and elegance to a room, while also satisfying a number of needs. You can create urban, natural or colourful spaces according to your inspiration.

MADE TO MEASURE

To help you tackle even your most daring challenges, our team can develop custom coatings just for your projects.

Let's share our expertise to create the products of tomorrow.

INNOVATIVE AND FUNCTIONAL TEXTILES TO SATISFY YOUR DESIGN BRIEF

As a creator of living spaces, DECOMIND® products are renowned for their specifications and their ability to adapt to any situation. Our product range can be used for soundproofing, for decoration, or even for backlighting, and are the fabric of choice for construction and renovation projects.

ECO DESIGN MANAGEMENT

For a number of years, SENFA has developed an integrated eco-design management system and commit to a constant process of offering new products and improving existing ones in order to optimise functional quality and respect for the environment.

Our textile substrates conform to industry health and safety standards as well as environmental regulations. Additionally, we integrate each product's carbon footprint into the analysis of its life cycle.
