

# Technical yarns

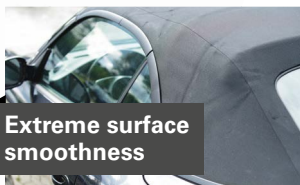

## More than textiles

Yes, there is more behind high-visibility waistcoats, plasters, candle wicks, personal protective equipment, military clothing etc. than just a coloured thread.

Thanks to various finishings, manufacturing processes and fibre compositions, textiles can do much more, and the finishing is correspondingly more demanding. We have made it our business to specialise in these technical yarns. To give you an idea of this, we have set up TVU-TechHub where we briefly and concisely explain some of our range of possible yarn properties for technical yarns. Have fun browsing!

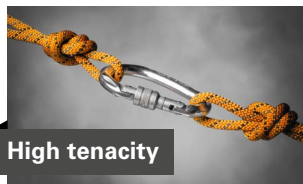

**Fluid repellent**

**Extreme surface smoothness**

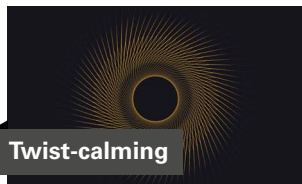

**Temperature and flame resistance**

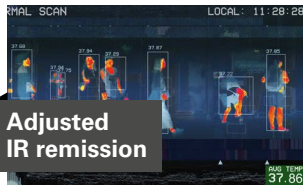

**High tenacity**

**Resistant to chemicals**

**Twist-calming**

**Adjusted IR remission**

**High visibility**

**Conductivity**

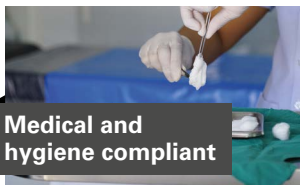

**Recyclable**

**Filament wires**

**X-ray contrast**

**Medical and hygiene compliant**
