

next generation fasteners

SUREFAS offers next generation fasteners for technical textiles. For spots that matter. Where textile fasteners really make that difference. We supply products that add value in quality, functionality and looks. Making you or your products stand off from the crowd. Either by solving your problem, saving you money or simply ensuring a priceless experience.

SUREFAS B.V. is the Dutch company behind products like PERFIX®, Q-SNAP®, CAF-316® and CAF-COMPO®. Since 2003 the SUREFAS team is dedicated to improve fastening systems for industrial textiles. Born out of pure frustration over current systems to fasten covers and spray hoods on boats, the applications of today are numerous. A team of technical inventors with high quality production facilities and an excellent feeling for customer needs is determined to bring real solutions to this market worldwide.

PERFIX®

SAFE, SECURE AND ELEGANT

PERFIX is the only secure connection without using any protruding parts. Born out of pure frustration over these protruding parts sticking out on deck of the boat. PEFIX is designed for fixing covers on boats, but nowadays found in all kinds of applications where safety or comfort is an issue.

Q-SNAP®

NOTHING TOO TIGHT FOR Q-SNAP

Q-SNAP is the only secure fastener with stretch function. It is developed for covers and sprayhoods on boats and is perfect for all applications that require textiles to be tight and secure.

The patented Q-SNAP is just like a normal press-fastener, with 2 additional parts: a ring underneath the cloth and a gentle hook on deck. This combination turns the fastener into a secure connection that won't pop loose, while it incorporates a stretch-function (lever). The cloth is stretched as you fix.

CAF-316®

FINALLY: A PRESS FASTENER YOU CAN TRULY RELY ON

Hardly anybody realizes that press fasteners used in the tough conditions like marine applications are not even resistant to sea water - until now. Probably the smallest item on deck is now available in real 316 stainless steel: CAF-316®. To achieve true durability, even the internal spring is made of top quality duplex stainless steel, insuring years of dependable performance regardless of the conditions.

CAF-COMPO®

MATCHING ANY DESIGN

Imagine a screw-stud on deck of your beautiful boat used to fix a cover being 100% corrosion free and that blends away in the deck colour. A final farewell to those annoying eye-catching points that stand out of the smooth design lines, even if they are not corroded. Designers love to have the beautiful lines and shapes of their product not being disrupted by those inevitable points to hold cushions, blinds, carpets or covers down on deck. While it entails the exact same and quick installation as a normal screw stud. A unique formula of smart design and high quality materials make it possible to have a composite self-tapping screw stud for use in fiber glass, wood and other composites.
