

PFAS-free

New construction membrane material for PFAS regulation

Our membrane material does not contain resins of PFAS-regulated substances. It is polyester or glass-fiber based material with a special resin for high flexibility and durability and applicable for construction of various membrane structures.

What are PFAS?

PFAS stands for per- and poly-fluoroalkyl substances, which are a large class of thousands of synthetic chemicals that are used in many products these days.

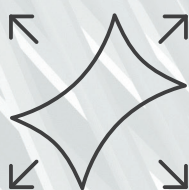

However, they are increasingly detected as environmental pollutants, and some won't break down in the environment for tens of thousands of years, earning them the moniker "forever chemicals"

This problem is being discussed throughout the world.
